CITRIX 1Y0-722 EXAM QUESTIONS & ANSWERS

Exam Name: MetaFrame Secure Access Manager 2.2: Administration

Certkey

QUESTION 1

While using the Embedded Application CDA containing Microsoft Word, a user decides to save the open .DOC file as an HTML file. For help with this task, the user should click _____.

- A. the Help button in Microsoft Word
- B. the Help button in the title bar of the CDA window
- C. the Settings button in the title bar of the CDA window
- D. The Help button at the top-right corner of the access center

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 2

How does the Citrix Index Server join the access server farm?

- A. During setup, the administrator specifies the server farm that the Index Server must join.
- B. After installation, administrators must specify the Index Server base port in the Access Server Farm Properties.
- C. After installation, administrators must add the Index Server manually to the farm using the Access Management Console.
- D. After installation, the administrator must add the Index Server manually to the farm using the Service Configuration Wizard.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 3

Which option should be selected to trigger indexing of a website to begin as soon as the Indexed Web Properties dialog box is closed?

- A. Autoindex
- B. Follow redirection
- C. Queue for Indexing
- D. Check for changes at regular intervals

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Page 214 of Citrix Course 1301BB

QUESTION 4

The indexing server search engine will return folder index content links to a user only if that user has permission to access that content. Which access control mechanism does the index server search engine use to accomplish this?

- A. Checking the files configured in the access center user's primary role with each file that is indexed.
- B. Checking the files configured in the Search CDA's Advanced Configuration Wizard with each file that is indexed.
- C. Checking the access center user's logged-on credentials against the ACL associated with each file that is indexed.
- D. Checking the access center user's logged-on credentials against the index server search engine service account credentials.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Page 217 of Citrix Course 1301BB

QUESTION 5

What is the first thing that should be checked after setting up a file index?

- A. The application event log in event viewer should be checked for errors.
- B. The properties for the file index should be checked from the Access Management Console.
- C. The nfe_httpfeth.log file should be checked to make sure that the web indexes are working.
- D. The nfe_autoindexer.log file should be checked to make sure that the file indexes are working.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

722 Exam Enablement Guide

QUESTION 6

Scenario: An administrator is using the Access Management Console to manage an access server farm called "Main Access." The Agent and Web Servers for the "Main Access" access server farm are installed on the same system as the console.

What will happen if the administrator attempts to manage another access server farm from the console in the above scenario?

<http://www.gratisexam.com/>

- A. The access server farm configuration wizard will launch.
- B. The administrator will be prompted to enter credentials for the other access server farm.
- C. An error message indicating that the console must be installed remotely to access the other server farm is displayed.
- D. An error message indicating that the remote access server farm must be imported into the existing access server farm to obtain access from the console.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Page 90 of Citrix Course 1301BB

QUESTION 7

Which file types is associated with exported access center packages?

- A. XML
- B. EXE
- C. HTM
- D. CAB

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Page 356 of Citrix Course 1301BB

QUESTION 8

How can an administrator change an existing access center from anonymous to authenticated access using the Access Management Console?

- A. In the People Properties dialog box in the console
- B. In the Access Properties dialog box in the console
- C. By running the Add New Users wizard in the console
- D. In the Server Farm Authentication dialog box in the console

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu: Setting up anonymous access You can set anonymous access in the new Access Center wizard when creating a center. To change the setting, right-click the People node and choose Properties. Use the General tab to change authentication and login settings. Clear the Authentication Required option to allow anonymous access to all users Select Authentication Required to require all users to log in to the access center

QUESTION 9

What can be used to balance Web Servers in the MetaFrame Secure Access Manager implementation?

- A. Access Server Load Balancer
- B. Microsoft Network Load Balancing
- C. Microsoft IIS Administration Service
- D. Windows NT Load Balancing Service

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 45 NLB is supported on Windows 2000 Advanced Server and higher. To load balance MetaFrame Secure Access Manager Web servers, you must enable and configure NLB on all the Web servers in the access server farm.

QUESTION 10

HOST.DLL sends a message to the Agent Server to process a request from a browser. What happens before the message is sent to the agent server?

- A. The Agent Server generates an HTML response.
- B. HOST.DLL unwraps the HTML from the message.
- C. The Agent Server pulls the configuration data from the State Server.
- D. LOSDBALANCESERVER.DLL load balances and identifies which Agent Server can process the message.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Page 38 of Citrix Course 1301BB

QUESTION 11

How many State Servers can be installed in an Access Server Farm?

- A. Only one
- B. As many as two
- C. One for every five Agent Servers
- D. As many as the Access Server Farm load requires

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Page 31 of Citrix Course 1301BB

QUESTION 12

MetaFrame Secure Access Manager supports which of the following for user management and log-in authentication? (Choose two.)

- A. PKI
- B. NDS
- C. Kerberos
- D. NT Domains
- E. Active Directory

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

Definition: account authority - A platform-specific source, such as a Windows NT domain or Active Directory, for user account information and credential validation.

QUESTION 13

In a MetaFrame Secure Access Manager implementation that includes Secure Gateway, the Gateway Client is used to connect to _____. (Choose two.)

- A. access centers
- B. indexed content

- C. internal web content
- D. MetaFrame Presentation servers

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

722 Exam Enablement Guide Access Center Help Menu: To secure access to internal Web servers In the Access Management Console, right-click the access center and choose Properties. On the Secure Gateway tab, select "Allow external access to farm Web servers." Click New to add an internal Web server. When you include a Web server in the list of internal Web servers, authenticated users can access content hosted on the Web server through the access center. Use the Edit and Delete buttons to change the list of internal Web servers.

Important: Access to internal Web servers prompts users to download an ActiveX component, the Gateway Client for MetaFrame. For more information about the Gateway Client for MetaFrame, see the Secure Gateway Administrator's Guide.

QUESTION 14

A MetaFrame Administrator has configured an access center to allow users to change their password. While entering new credentials, how will a user's new password be protected?

- A. It is encrypted during login.
- B. It is wrapped in XML and passed to the Web Server.
- C. It is secured by whatever method is used to secure the connection.
- D. It is encrypted and wrapped in XML before being passed to the Web Server.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 158

QUESTION 15

When externally accessing an access center through Secure Gateway, which component performs the authentication process?

- A. logon agent
- B. session init CDA
- C. authentication service
- D. Secure Ticket Authority (STA)

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Page 287-288 of Citrix Course 1301BB

QUESTION 16

If there are multiple MetaFrame Presentation server farms configured, how can the administrator guarantee that applications will be used to launch published content from particular farms? (Choose two.)

- A. Disable "List server farm resources in access center menus" for undesirable farms.

- B. Move the desired farms to the top of the prioritization list on the Published Resources tab.
- C. Assign the desired farm a value of 10 in the prioritization list on the Published Resources tab.
- D. Application from MetaFrame server farms are chosen to launch published content based on the alphabetical order of the farms.

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

A: Access Center Help Menu: Access Center Properties: Published resources Use this tab to enable or disable the inclusion of MetaFrame published applications, server desktops, and content in the access center. Include resources from MetaFrame XP servers: This option enables resources published in one or more MetaFrame XP server farms to be available from an access center. You can make applications and other published resources available from the Launch menu, the Add menu, the Embedded Application CDA, and the Program Neighborhood CDA. Available MetaFrame XP server farms: A list of MetaFrame XP server farms that can provide published resources to users from the access center. Farm Name: The name of the MetaFrame XP server farm. The name was entered in the New Access Center wizard or during the addition of a new farm to this list. List in menus: Indicates the published resources from the farm are provided in the Add and Launch menus of the center. The values are Yes and No.

B: Use the Up and Down buttons to list the farms in order of priority. When a user clicks a document link in the access center, the application to launch is based on the priority of the MetaFrame XP server farm and the published resources assigned to the user

QUESTION 17

Which two statements are examples of the translated address mode for MetaFrame Presentation servers? (Choose two.)

- A. MetaFrame Presentation servers are contacted through the default IP address.
- B. MetaFrame Presentation server connections are sent to alternate addresses configured at the individual servers.
- C. The MetaFrame Presentation server is configured to supply private IP addresses to internal users and public IP addresses to external users.
- D. MetaFrame Presentation server connections are funneled through one external IP address and then, based on port number, forwarded to the appropriate server.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu: Configuring address translation for MetaFrame XP servers. If your MetaFrame XP server farm is behind a firewall, you can map the internal IP address of each MetaFrame XP server to an external IP address. Incoming ICA Client requests use the external IP address to access the MetaFrame XP server. The external IP address is translated to the actual internal IP address based on the mapping you configure. Similarly, outgoing ICA traffic is translated to the external IP address before being sent to the ICA Client. Important: To use this option, you must have a firewall with network address translation enabled. You can use the console to configure address modes where the IP address sent to the ICA Client is based on the IP address of the client-inside or outside the firewall. -To map the internal IP address of a MetaFrame XP server - In the Access Management Console, right-click the access center and choose Properties. -On the Published Resources tab, select the server farm and click Edit. The MetaFrame XP Server Farm Properties dialog box appears. -On the Address Mode tab, click Address Translation. The Address Translation Settings dialog box appears. -Click New. -Enter the internal IP address or FQDN (Fully Qualified Domain Name) and port of the MetaFrame XP server. -Enter the external IP address or FQDN and port that clients must use to connect to the MetaFrame XP server. -Click OK to save your settings. -Use the Edit and Delete buttons to change the mappings in the list. -Click OK to close the Address Translation Settings dialog box. -In the Address Mode tab, click New to configure the address mode as Translated Address for an IP address or range of IP addresses.

The Address Translation settings will apply only to the specified client IP addresses.

QUESTION 18

An administrator has configured the company access center to allow users permission to configured ICA options. For the above scenario, which three ICA options can be configured in the access center by the user? (Choose three.)

- A. Font size
- B. Window size
- C. Sound settings
- D. Printer mapping
- E. Window color depth

Correct Answer: BCE

Section: (none)

Explanation

Explanation/Reference:

Visual Verification Access Center Help Menu: Access Center Properties: User Use this tab to configure the settings and permissions for users accessing MetaFrame published resources with this access center. You can define the settings in three ways:

Choose the server default, which applies the settings configured in MetaFrame XP Select a specific setting

Allow the user to determine the setting

-Sound settings: The sound capabilities for the published application. The available options are Server Default, Sound Off, and Sound On.

-Window color settings: The color depth for the published application. The available options are Server Default, 16 colors, 256 colors, High Color (16-bit), or True Color (24-bit).

-Window size settings: The window size for the published application. You can specify window size as the server default, a standard resolution, custom resolution, percentage of the screen size, full screen, or seamless window. For each setting, select the "Allow user to change..." check box if you want users to be able to modify the setting. If you select the check box, the settings are added to the Settings page of the access center.

QUESTION 19

Which task must be done to allow end users the opportunity to choose the MetaFrame Presentation server from which they will include resources?

- A. In the "List in menus" filed for all server farms, ensure that "yes" is listed.
- B. Select the "Apply MetaFrame XP content redirection" option on the Published Resource tab of the Access Center Properties.
- C. Enable the "Allow users to choose MetaFrame server farms" on the Published Resource tab of the Access Center Properties.
- D. Select the "Include resources from MetaFrame XP servers" option on the Published Resource tab of the Access Center Properties.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 20

How does selecting the "Failover sequences for unavailable servers" option impact the communication between MetaFrame Secure Access Manager and MetaFrame Presentation Server farms?

- A. MetaFrame Secure Access Manager will randomly route each Citrix XML service to a different server in the priority list. If an error occurs while communicating with a server, that server will be bypassed for specified

length of time.

- B. The priority list will be used to route requests from the access center. If an error occurs while communicating with the first server in the list, that server will be bypassed for a specified length of time and an attempt will be made to communicate with the next server on the list.
- C. The priority list will be used to route requests from the access center. If an error occurs while communicating with any server in the list, the request will be deleted from the list. The administrator will need to re-add the failed server manually to the list once the error is corrected.
- D. MetaFrame Secure Access Manager will route each Citrix XML service to a different server based on the sequence in the priority list. If an error occurs while communicating with a server, all communication between that server farm and the access center will stop for a specified time.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 153

Access Center Help Menu: The list of STA servers is also used for failover support. If an error occurs while communicating with an STA server, MetaFrame Secure Access Manager bypasses the failed server for a specified time, and communication continues with the remaining servers on the list. By default, a failed STA server is bypassed for five minutes. The bypass time is configured on the Servers tab for the MetaFrame XP server farm properties.

QUESTION 21

Where is the MetaFrame Secure Access Manager license activated?

- A. The License Manager wizard
- B. The license label on the products package
- C. The Licensing page in the installation wizard
- D. The Licensing tab in the Access Server Farm Properties in the console

Correct Answer: DAC

Section: (none)

Explanation

QUESTION 22

Which software is required to be installed on a server before installing MetaFrame Secure Access Manager?

- A. Microsoft Visual Basic
- B. Microsoft .NET Framework
- C. Web Interface for MetaFrame Presentation Server
- D. Citrix MetaFrame Presentation server

Correct Answer: BAC

Section: (none)

Explanation

QUESTION 23

After installing MetaFrame Secure Access Manager, the administrator decides to change the service account specified during setup. How can account information be changed after installation?

- A. By using the Service Configuration wizard.
- B. By modifying the account values listed in NFUSE.CONF

- C. By altering the account information in the access server farm database.
- D. By changing the account information displayed in the Access Server Farm Properties.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 24

Which of the following are valid upgrade scenarios to migrate an existing access (portal) server farm from NFuse Elite 1.0 to MetaFrame Secure Access Manager? (Choose two.)

- A. Install the MetaFrame Secure Access Manager software on the existing NFuse Elite server farm machine (s)
- B. Export the portal from NFuse Elite 1.0, install MetaFrame Secure Access Manager on a new machine, and then import the portal.
- C. Export the portal from NFuse Elite 1.0, upgrade your standalone Access Management Console, and then import the portal configuration.
- D. Apply NFuse Elite Service Pack 2 to the existing NFuse Elite Server farm machine (s) and then install MetaFrame Secure Access Manager.

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

Not D as there is no NFuse Elite SP2, and no to C as upgrading console won't work.

QUESTION 25

How is an access an access server farm identified?

- A. By the IP address of the primary server
- B. By the machine name of the primary server
- C. By the name of the first access center created
- D. By the name of the domain where the access server farm resides

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Visual Verification & Page 54 of Citrix Course 1301BB

QUESTION 26

Which component of MetaFrame Secure Access Manager generates the presentation for an access center, controlling user access, and processing access center requests?

- A. HOST.XPS
- B. Content Delivery Service (CDS)
- C. Cascading Style Sheets (CSSs)
- D. Content Delivery Agents (CDAs)

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Page 26 of Citrix Course 1301BB

QUESTION 27

Which two of the following are displayed when a standalone Access Management Console is first launched? (Choose two.)

- A. All active roles in the access server farm
- B. All active users in the access server farm
- C. All the access centers in the access server farm
- D. The MetaFrame Secure Access Manager license key
- E. The access server farm that was managed last from the console

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 28

Which two statements are true for folders created within the Access Management Console? (Choose two.)

- A. Folders are containers for users.
- B. Folders are containers for CDAs.
- C. Folders are containers for pages.
- D. Folders are assigned roles when created.
- E. Folders are displayed in the access center menu.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 73 Create a folder when you want to add pages to an access center or organize pages. All pages in an access center must be in folders. If no folders exist, you must create a folder before you can choose New Page.

QUESTION 29

You have MetaFrame Secure Access Manager implemented to provide access for all users in your large enterprise. Each of your ten departments has their own access server farm. How many access server farms can you manage concurrently from a single Access Management Console?

- A. You can manage only one server farm at a time.
- B. You can manage all the server farms at the same time.
- C. You can manage as many as five server farms at a time.
- D. You can manage as many as two server farms at a time.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Page 90 of Citrix Course 1301BB

QUESTION 30

Which statement is true?

- A. The Access Management Console cannot be published on a MetaFrame Presentation server.
- B. Users without administrative rights may access a published Access Management Console as long as they have been assigned it as a resource.
- C. The MetaFrame Presentation server hosting the Access Management Console does not have to reside in a trusted domain of the MetaFrame Secure Access Manager server farm.
- D. An Access Management Console published on a MetaFrame Presentation server can be used by administrators even if the ICA client machine is not in a trusted domain of the MetaFrame Secure Access Manager server farm.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 154 Publishing the Access Management Console To provide a convenient and secure method for administrators to use the Access Management Console remotely, you can use MetaFrame XP server to publish the console. An administrator can use a published Access Management Console even if the local machine's domain is not trusted by the domain containing the MetaFrame Secure Access Manager server farm. With the correct configuration, the published Access Management Console can be launched from any location. To provide the Access Management Console as a published application, you must meet the following conditions: The user accounts accessing the published console must have administrator permissions on the state server. Any MetaFrame XP server hosting the console must be in a domain trusted by the state server's domain.

QUESTION 31

Scenario: There is new team SQL administrator. This person will administer all databases including those required for CDAs with in the access center. Because he is replacing another employee, the new administrator's credentials will need to be updated for the SQL database server. How can these new credentials be added to the access center?

- A. Edit the SQL database registry key.
- B. Create new SQL account using SQL Server Agent.
- C. Create a new role and give the new user access to this role.
- D. Use the Service Configuration Wizard to specify the new credentials.
- E. Use the People node in the Access Management Console to specify the new credentials.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Visual Verification

QUESTION 32

How should TCP ports be configured for use with MetaFrame Secure Access Manager 2.2?

- A. The Administrator should use the Secure Ticket Authority configuration tool.
- B. The administrator should allow the Microsoft Exchange Server to dynamically assign ports on start up.
- C. The administrator should configure Microsoft Exchange Server to use a static port assignment for firewall traversal.

- D. The administrator should use the Access Management Console of the MetaFrame Secure Access Manager Access Center.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

CTX-1303AW Elearning Course. When Microsoft Exchange Server is configured for the messaging synchronization group and default port, 135, is accepted, the server is queried by the STA about the ports currently in use for Exchange services. These ports are added implicitly but if an Exchange Server is restarted these ports may change, invalidating messaging synchronization settings. Citrix recommends that the ports used for MAPI traffic on the Exchange Server be set explicitly to ensure that the ports do not change when the Exchange Server is restarted. Setting these ports explicitly also reduces the number of ports required to be open on the internal firewall for secure remote access to the Exchange Server.

QUESTION 33

What are two things that must be done prior to installing the Advanced Gateway Client? (Choose two.)

- A. An administrator must be logged on to the system.
- B. The administrator must not be logged on to the system.
- C. The computer you want to install the client on must be running the Citrix Extranet client.
- D. The computer you want to install the client on must not be running a server operating system.

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

CTX-1303AW Elearning Course. Advanced Gateway Client Installation: The following are considerations before installation: Authority to install software on the client device is required No Citrix Extranet client may be installed on the client device The Advanced Gateway Client changes the network protocol stack on the client device.

QUESTION 34

The enable access to Microsoft Exchange Servers, a list of internal server names that the Advanced Gateway Clients allowed to contact is stored in the _____. (Choose the response that completes the sentence correctly.)

- A. Logon Agent
- B. Secure Gateway
- C. Secure Ticket Authority
- D. Access Management Console

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

CTX-1303AW Elearning Course. MetaFrame Secure Access Manager uses the Secure Ticketing Authority (STA) to provide users with Advanced Gateway Client access to internal servers without disclosing the server address externally. Access to servers within the secure network using the Advanced Gateway Client can be restricted by defining a list of accessible servers in the STA

QUESTION 35

Charles is configuring the Secure Ticket Authority for his company. When configuring the Ticket Granting parameters he sets the Access Limit value to 0. What does setting this value to 0 indicate?

- A. Setting the value to 0 indicates that the number of TCP connections allowed per ticket granting ticket is 0.
- B. Setting the value to 0 indicates that the limit to the number of TCP connections allowed is no more than 1.
- C. Setting the value to 0 indicates that there is no limit to the number of TCP connections allowed per ticket granting ticket.
- D. Setting the value to 0 indicates that the feature which determines the number of TCP connections allowed per ticket granting ticket is disabled.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

CTX-1303AW Elearning Course Session Lifetime Session lifetime settings can be configured on the Ticket Granting parameters page of the configuration tool in the following ways: -Final Timeout: (sec): Total lifetime (0 - 999999 seconds) for a ticket issued by the Secure Ticketing Authority. The Zero (0) indicates ticket never expires. -Idle Timeout: (sec): Period of inactivity (0 - 999999 seconds) after which tickets timeout. The Zero (0) indicates no idle timeout period. -Access Limit: Total number of TCP connections (0 - 999999) allowed per ticket. The Zero (0) indicates no practical limit to the TCP connections allowed per ticket

QUESTION 36

Select the answer that best explains the purpose of the Alternative User Interface feature of MetaFrame Secure Access Manager 2.2.

<http://www.gratisexam.com/>

- A. It displays the configuration information for selected items in the console tree.
- B. It allows an administrator to control the trusted domain from which users can be added.
- C. It allows users to connect directly to portals or web enabled applications upon logon rather than to the Access Center.
- D. It allows remote users to access email in real time when working online and synchronize their folders in preparation for working offline.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu: Securing alternative user interfaces. MetaFrame Secure Access Manager 2.2 now supports "alternative user interfaces." This powerful new feature allows administrators to securely integrate existing intranets, Web pages and enterprise portals such as SAP Enterprise Portal, IBM WebSphere, and Microsoft SharePoint into their access infrastructure while still taking advantage of MetaFrame Secure Access Manager's role-based access control, MetaFrame Presentation Server integration, and SSL-based secure connectivity

QUESTION 37

Suppose a user is trying to log on for the first time to the Access Center by using the Logon Agent. The user mistakenly selects the option "I already have a client" How can this problem be resolved?

- A. The user would have to reboot the computer.
- B. The administrator would have to reboot the Agent Server.

- C. The Cookie would have to be deleted from the user's computer.
- D. The administrator would have to remove the users performances from the Access Center.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Page 288 of Citrix Course 1301BB

QUESTION 38

Which two options are available for load balancing Agent Servers in an access server farm? (Choose two.)

- A. Using a third-party load balancer
- B. Prioritizing Agent Servers in the farm
- C. Configuring the access server farm for fail over
- D. Routing requests based on session ID and hash number
- E. Configuring the access server farm to load balance round-robin

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

Page 22 of Citrix Course 1301BB 722 Exam Enablement Guide To distribute ticket requests among several STAs, you can set up a prioritized list of URLs to contact for ticketing information for each access center. Secure Gateway balances the load of ticket requests based on the sequence of the STA URLs in the priority list. As agent servers request tickets for users, Secure Gateway routes the initial request to the first URL in the list, the second request to the second URL, and so on. After the last URL in the list, the process starts again with the first URL in the list. This method is also known as round robin. Secure Access Manager Administrator's Guide v2.1, Page 154 You can use the priority list to load balance requests to MetaFrame XP servers.

QUESTION 39

One of the Agent Server, Agent07, in your access server farm had a fatal system failure. To ensure that access is uninterrupted you would like to disable this server from the server farm. Which nodes would you access to disable the Agent Server?

- A. CDAs node
- B. Access Center node
- C. Access Server Farm node
- D. Secure Access Management Console node

Correct Answer: CA

Section: (none)

Explanation

QUESTION 40

Selecting "Users can customize page" in the New Page Wizard allows users to perform which two tasks? (Choose two.)

- A. Change the number of columns on the page.
- B. Add content to the page using the Add menu.
- C. Move content that has not been locked to another page.

D. Move content that has not been locked to another position on the page.

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

Secure Access Manager Administrator's Guide v2.1, Page 79

QUESTION 41

What are two ways of adding a specific CDA so that it is available for MetaFrame administrators to add to access center pages? (Choose two.)

- A. Add it using Role Properties.
- B. Add it using Page Properties.
- C. Add it using Access Center Properties.
- D. Add it during basic access center creation.
- E. Add it during custom access center creation.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

Page 110 of Citrix Course 1301BB

QUESTION 42

Where can you set a default domain for MetaFrame Secure Access Manager login?

- A. Role node > Properties
- B. People > Properties
- C. Server farm node > Properties
- D. Access Center node > Properties

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu. To display People Properties Under the access center you want to configure, right-click People and choose Properties. Setting up user authentication Use the following options on the General tab to configure access center login and user authentication: Domain Specification: These options control how users specify a domain for authentication of their Windows user accounts. You can set up a list of default domains, let users enter a domain name, or specify a single domain that applies to all users.

QUESTION 43

Which two options can be edited in the User Properties? (Choose two.)

- A. User ID
- B. Password
- C. User's theme
- D. User access
- E. Primary role settings

Correct Answer: DE

QUESTION 48

After a new installation of MetaFrame Secure Access Manager, _____.

- A. a basic access center is automatically created
- B. a custom access center is automatically created
- C. no access center is created. The option "New" must be chosen to create one
- D. no access center is created, but there is a prompt to create one during the first use of the Access Management console

Correct Answer: DAC

Section: (none)

Explanation

QUESTION 49

What is used to identify the user making a request in a MetaFrame Secure Access Manager implementation?

- A. User ID
- B. Session ID
- C. User profile
- D. Domain name

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Page 40 of Citrix Course 1301BB

QUESTION 50

What statement is true?

- A. Active Directory does not support the importing of users.
- B. Importing users from Active Directory requires the same process as importing users from Windows NT.
- C. Active Directory users from a domain other than the access server farm domain cannot be imported into an access center.
- D. Active Directory users from another domain must be imported into the domain of the access server farm before being imported into an access center.

Correct Answer: B

Section: (none)

Explanation

QUESTION 52

When configuring the Embedded Application CDA, which option can be selected at the access center level?

- A. Default height
- B. Customized height
- C. Windows desktop to display
- D. Published application to display

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu: To configure Embedded Application (center level) -Right-click the access center and choose Properties. -On the CDAs tab, select Embedded Application and click Configure. The Embedded Application wizard appears. -Specify the height for all instances of the CDA. This setting controls the vertical size (in pixels) of the application window for all instances of this CDA.

QUESTION 53

What is the correct way for a user to move a CDA on a page?

- A. On the page, drag the CDA and drop it in its new position.
- B. Select Page Settings from the menu. Then, use the arrow keys to move the CDA.
- C. In the CDAs tab of the page's Properties, drag the CDA and drop it in its new position.
- D. In the CDAs tab of the page's Properties, remove the CDA and add it again in its new position.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Access Center Help Menu: Users can customize page: Select this option to permit users to make the following changes to the page: Drag CDAs to change their positions on the page.

QUESTION 54

Scenario: An administrator of an access center containing the Program Neighborhood CDA configures the CDA at the access center level. She also has customized the CDA at the page level. Recently, management decided

to add an additional MetaFrame Presentation server farm to the access center. At the access center level, the administrator has configured the Program Neighborhood CDA to include published resources from the newly-added MetaFrame Presentation server farm. For the above scenario, which statement is true?

- A. The CDA will need page level customizations after the new access center level configurations are deployed.
- B. The new MetaFrame Presentation server farm published resources will not be available in the customized instances of the CDA.
- C. The previous page level customizations of the CDA will be lost once the new access center level configurations are deployed.
- D. The previous page level customizations of the CDA will be maintained even after the new access center level configurations are deployed.

Correct Answer: D

QUESTION 57

For an implementation of MetaFrame Secure Access Manager that includes Secure Gateway, which three can be used when specifying access to internal web servers in the Access Management Console? (Choose three.)

- A. IP addresses
- B. NETBIOS names
- C. Agent server name
- D. XML Communication port
- E. Fully-qualified domain names
- F. TCP relay server communication port

Correct Answer: ABE

Section: (none)

Explanation

QUESTION 58

Which properties should be accessed to allow users to be warned on access center login that their password is due to expire?

- A. User Properties
- B. People Properties
- C. Access Center Properties
- D. Secure Access Manager Properties

Correct Answer: B

Section: (none)

Explanation

QUESTION 59

When configuring the Interactive Poll CDA, what information needs to be provided when the "Use access server farm database settings" option is enabled?

- A. Password
- B. User name
- C. Both A and B
- D. Database name
- E. Database server name

Correct Answer: D

Section: (none)

Explanation

QUESTION 60

An administrator has included the Program Neighborhood CDA in her company's access center. The access center does not require authentication. She has configured the Program Neighborhood CDA so that users are not required to enter their credentials. For the above scenario, which statement is true?

- A. Users can access all published resources.
- B. Users cannot access any published resources.
- C. Users can access only published content and cannot launch applications.
- D. Users can access only published resources that allow anonymous connections.

Correct Answer: D

Section: (none)

Explanation

QUESTION 61

Which two types of items can be displayed in the Embedded Application CDA? (Choose two.)

- A. A server desktop
- B. Published content
- C. A single published application
- D. A published application set for a user

Correct Answer: AC

Section: (none)

Explanation

QUESTION 62

Which statement is true?

- A. Above a locked CDA, all CDAs must be locked.
- B. Unlocked CDAs can be located above locked CDAs.
- C. Locking a CDA causes all the CDAs in the column to be locked.
- D. If a CDA is locked, then all CDAs below it are automatically locked.

Correct Answer: A

Section: (none)

Explanation

QUESTION 63

A column on a page has CDA1, CDA2, and CDA3 arranged from top to bottom. If CDA2 is locked, what happens if a user attempts to drag CDA1, which is located above CDA2?

- A. CDA1 cannot be moved.
- B. CDA2 moves up one space.
- C. A drop target remains where CDA1 used to be.
- D. CDA3 moves to the space CDA1 was occupying.

Correct Answer: A

Section: (none)

Explanation

QUESTION 64

When a user makes a request within an access center, which component prompts the LOADBALANCERSERVER.DLL to identify an available Agent Server?

- A. CDS.DLL
- B. HOST.DLL
- C. HOST.XPS
- D. LOADBALANCERSERVER.XPS

Correct Answer: B

Section: (none)

Explanation

QUESTION 65

Which of the following statements is false?

- A. Access center users can view pages associated with their roles.
- B. Access center users can create their own access center pages if the administrator allows it.
- C. Access center users can personalize pages in the access center if customization is enabled.
- D. Access center users are assigned to specific roles which determine their page access.

Correct Answer: B

Section: (none)

Explanation

QUESTION 66

How can you determine if a web index is actually gathering pages?

- A. Check the nfe_autoindexer.log file.
- B. Check the HTTP Fetch Administration tool.
- C. Check the application event log in event viewer for errors.
- D. Check in the Access Management Console under properties for the file index.

Correct Answer: B

Section: (none)

Explanation

QUESTION 67

Which Index service is responsible for indexing websites in a MetaFrame Secure Access Manager implementation?

- A. MetaFrame Autoindexer service
- B. MetaFrame Indexing DRE service
- C. MetaFrame Indexing HTTP Fetch service
- D. MetaFrame Indexing Configuration service

Correct Answer: C

Section: (none)

Explanation

QUESTION 68

Which three files can be indexed in a MetaFrame Secure Manager Implementation? (Choose three.)

- A. HELP.TXT
- B. NEWHIRE.PPT
- C. WELCOME.MIM
- D. WEBIMAGE.TIFF
- E. YEARENDREVIEW.DOC

Correct Answer: ABE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 69

Which software is required to be installed on a server before installing MetaFrame Secure Access Manager?

- A. Microsoft Visual Basic
- B. Microsoft.NET Framework
- C. Web Interface for MetaFrame Presentation Server
- D. Citrix MetaFrame Presentation server

Correct Answer: B

Section: (none)

Explanation

QUESTION 70

When setting up MetaFrame Secure Access Manager, the administrator decides to use MSDE. Where is the database automatically installed?

- A. On any system in the network
- B. On a separate standalone server
- C. On the same system as an Agent server
- D. On the same system as the State server

Correct Answer: D

Section: (none)

Explanation

QUESTION 71

At which point can a local account be specified for the services account?

- A. When creating a new access center
- B. When joining a multi-server access server farm
- C. When creating a multi-server access server farm
- D. When creating a single-server access server farm

Correct Answer: D

Section: (none)

Explanation

QUESTION 72

When must the MetaFrame Secure Access Manager license be activated?

- A. During the license grace period
- B. During installation of the State server

- C. During installation of the Access Management Console
- D. Before secondary servers are added to the infrastructure of the implementation

Correct Answer: A

Section: (none)

Explanation

QUESTION 73

Which components of MetaFrame Secure Access Manager 2.1 do not require an update during the installation of MetaFrame Secure Access Manager 2.2?

- A. Logon Agent and Secure Gateway
- B. Secure Gateway and Access Center
- C. Logon Agent and Secure Ticket Authority
- D. Secure Ticket Authority and Access Center

Correct Answer: B

Section: (none)

Explanation

QUESTION 74

Which two settings can be changed using the Service Configuration wizard? (Choose two.)

- A. Caching values
- B. Service account
- C. Performance values
- D. SQL database account
- E. Web server assignments
- F. Agent server assignments

Correct Answer: BD

Section: (none)

Explanation

QUESTION 75

What must be done to import a CDA into an access server farm?

- A. Right-click the CDA node and choose Import CDA.
- B. Right-click the server farm node and choose Import CDA.
- C. Right-click the access center node and choose Import CDA.
- D. Select the server farm node, double-click the access center and choose Import CDA.

Correct Answer: A

Section: (none)

Explanation

QUESTION 76

In order for administrators to use published Access Management Consoles to manage access server farms, which two conditions must be met? (Choose two.)

- A. The user accessing the published Access Management Console must have an account for the access

center.

- B. Local administrative rights on the State Server must be associated with the user who attempts to use the published console.
- C. The MetaFrame Presentation server hosting the Access Management Console must reside in a domain trusted by the access server farm domain.
- D. The client machine from which the administrators will use the published Access Management Console must reside in a domain trusted by the access server farm.

Correct Answer: BC

Section: (none)

Explanation

QUESTION 77

Jack must configure access to the Alternative User Interface for users who are connecting to the Access Center. Which two options must be used to perform this task? (Choose two.)

- A. Logon Agent
- B. Secure Ticket Authority
- C. Microsoft Exchange Server
- D. Access Management Console

Correct Answer: AB

Section: (none)

Explanation

QUESTION 78

Sandy must identify whether the Advanced Gateway Client is installed on 50 computers in her network. What must Sandy use to perform this task?

- A. Add / Remove Programs
- B. Microsoft Internet Explorer
- C. Access Management Console
- D. Management Console for MetaFrame Presentation Server

Correct Answer: A

Section: (none)

Explanation

QUESTION 79

Through which method do users access email after they have logged on to the MetaFrame Secure Access Manager 2.2 gateway?

- A. Web mail access
- B. Microsoft Outlook running on a client computer
- C. Web Interface for MetaFrame Presentation Server
- D. Microsoft Outlook running on a MetaFrame Presentation Server

Correct Answer: B

Section: (none)

Explanation

QUESTION 80

A user is attempting to log on, but MetaFrame Secure Access Manager is unable to detect the presence of the Advanced Gateway Client on the user's computer. What is the method of resolution if the client is already installed?

- A. Have the user select "I already have a client". This will add a cookie list indicating that the client is already installed.
- B. Have the user select "I already have a client". This will add information to the local host cache indicated that the client is already installed.
- C. Have the user select "I wish to download the client now". This will add a cookie to the cookies list indicating that the client is already installed.
- D. Have the user select "I wish to download the client now". This will add information to the local host cache indicating that the client is ready to be installed.

Correct Answer: A

Section: (none)

Explanation

QUESTION 81

What does enabling the option "ICA Web Client with Java Client Support" in the access center properties client tab indicate?

- A. It indicates that users will be prompted on login to choose a client.
- B. It indicates that the Java ICA client will be used by default. ActiveX UCA client will be used when the browser does not support Java ICA clients.
- C. It indicates that the ActiveX ICA clients will be used by default. Java ICA client only will be used when the browser does not support the ActiveX ICA client.
- D. It indicates that the Java ICA client will be used. However, if the user attempts to launch a published application from within the access center, the ActiveX ICA client will be used.

Correct Answer: C

Section: (none)

Explanation

QUESTION 82

An implementation of MetaFrame Secure Access Manager contains multiple MetaFrame Presentation server farms that are integrated into the access center and configured to use content redirection. When users click on linked documents, applications are launched from a MetaFrame Presentation server farm. Given this scenario, what determines that the application will be launched for an access center user? (Choose three.)

- A. location of client device
- B. associated file type for the document
- C. published resources assigned to the user
- D. priority of the MetaFrame Server farms
- E. load of primary server in the MetaFrame Server farm

Correct Answer: ACE

Section: (none)

Explanation

QUESTION 83

Which three steps can be completed using the New Page Wizard? (Choose three.)

- A. Naming the page
- B. Associating roles with the page
- C. Associating themes with the page
- D. Setting up the column configuration
- E. Setting up authentication for the page

Correct Answer: ABD

Section: (none)

Explanation

QUESTION 84

A group of users is assigned to a role that has no home page specified. In the above scenario, which page do the users see when they log into the access center for the first time?

- A. My Page, which can be personalized
- B. The default home page for the access center
- C. The first page created and assigned to their role
- D. A page with a message advising that a page must be selected

Correct Answer: D

Section: (none)

Explanation

QUESTION 85

Which two statements are true? (Choose two.)

- A. Folders cannot be renamed.
- B. Folder can be renamed if no pages are contained in them.
- C. Folders can be renamed at any time by editing the Folders Properties.
- D. If a folder's name needs to be changed, the pages in the folder must be removed first before renaming.
- E. If a folder's name needs to be changed, a new folder can be created and then all the pages may be copied from the old folder into the new folder.

Correct Answer: AE

Section: (none)

Explanation

QUESTION 86

How does creating an access center with the Basic option differ from creating one with the Custom option?

- A. During basic access center creation no options are presented.
- B. Basic access centers cannot be customized after they are created.
- C. Basic access centers are given a generic name that cannot be changed.
- D. During basic access center creation only the authentication type and menu style are specified.

Correct Answer: A

Section: (none)

Explanation

QUESTION 87

Which component is responsible for Content Delivery Agent execution?

- A. Web Server
- B. State Server
- C. Agent Server
- D. Access Server Farm database server

Correct Answer: C

Section: (none)

Explanation

QUESTION 88

Which three statements regarding unauthenticated implementations of MetaFrame Secure Access Manager are true? (Choose three.)

- A. Users can customize CDA settings.
- B. All users are members of the Guest role.
- C. All users are identified as the Guest user.
- D. Users can customize themes and applications.
- E. Users cannot customize pages, including My Page.

Correct Answer: BCE

Section: (none)

Explanation

Explanation/Reference:

The correct answers should be B, C and E.

This is based on P62 of Citrix's SAM Admin Guide v2.0 (or page 64 of the SAM Admin Guide v2.1) as below-In an access center that does not require authentication...the access center applies the following settings to anyone who browses to the access center: All users are identified as the Guest user Users are all members of the Guest role Users cannot customize settings for CDAs Users cannot customize pages, including My Page

QUESTION 89

Scenario: A MetaFrame administrator has published Internet Explorer 5.5 for use in your farms. Users launch the published Internet Explorer to browse to access centers. After initial implementation, users complain that access center content flickers. For the above scenario, what is the recommended way to reduce the flickering of access center content accessed from an ICA session?

- A. Apply Internet Explorer 5.5 Service Pack 3.
- B. Add the value Force Offscreen Composition to the Internet Explorer registry key and edit the DWORD value.
- C. From the Advanced Internet Options within the browser section select the "Enable third-party browser extensions" selection.
- D. From the Advances Internet Options within the browser section select the "Force offscreen compositing even under Terminal Server" selection.

Correct Answer: B

Section: (none)

Explanation

QUESTION 90

As a network technician at Certkiller.com, you are required to place the following seven events in the order in which they occur.

Select and Place:

Tasks, place here

<i>Place first task here</i>
<i>Place second task here</i>
<i>Place third task here</i>
<i>Place fourth task here</i>
<i>Place fifth task here</i>
<i>Place sixth task here</i>
<i>Place seventh task here</i>

Tasks, Select from these

The Web Server provides the HTML output to the client browser.
The Agent Server handles CDA execution and formats CDA output.
The Web Server directs traffic through HOST.DLL
The Agent Server sends the response to the Web Server.
The Agent Server retrieves CDA configuration data from the State Server.
The incoming requests is sent to the Agent Server.
The client browser makes a request to the Web Server.

Correct Answer:

Tasks, place here

The client browser makes a request to the Web Server.

The Web Server directs traffic through HOST.DLL

The incoming requests is sent to the Agent Server.

The Agent Server retrieves CDA configuration data from the State Server.

The Agent Server handles CDA execution and formats CDA output.

The Agent Server sends the response to the Web Server.

The Web Server provides the HTML output to the client browser.

Tasks, Select from these

Section: (none)
Explanation

Explanation/Reference:

Explanation: As per answers in this product

1. Client Browser makes a request to the Web Server.
2. The Web Server directs traffic through the HOST.DLL.
3. The incoming request is sent to the Agent Server.
4. The Agent Server retrieves CDA configuration data from the State Server.
5. The Agent Server handles CDA execution and formats CDA output.
6. The Agent Server sends the response to the Web Server.
7. The Web Server provides the HTML output to the client browser.

As per Citrix admin guide

1. The client's Web browser requests the page from the Web server.
2. The Web server contacts an agent server based on an internal load-balancing algorithm for the page content.
- ***3. The agent server contacts the state server for configuration information.
4. The agent server builds the page from the required CDAs and sends the built page in XML format to the Web server.
5. The Web server converts the XML to HTML and sends it to the client's Web browser.
6. The client's Web browser processes and renders the page.

*** As per the Citrix admin guide, note that "the agent server" is contacted based on the "internal load-balancing algorithm" so that's why we put "Web Server directs traffic through Host.dll" before "Incoming request sent to Agent Server"
