Exam A

QUESTION 1

A vulnerability scan has returned the following information:

```
Detailed Results
10.10.10.214 (LOTUS-10-214)
```

```
Windows Shares
Category: Windows
CVE ID: -
Vendor Ref: -
Bugtraq ID: -
Service Modified - 4.16.2014
```

```
Enumeration Results:
print$      C:\windows\system32\spool\drivers
ofcscan     C:\Program Files\Trend Micro\OfficeScan\PCCSRV
Temp        C:\temp
```

Which of the following describes the meaning of these results?

- A. There is an unknown bug in a Lotus server with no Bugtraq ID.
- B. Connecting to the host using a null session allows enumeration of share names.
- C. Trend Micro has a known exploit that must be resolved or patched.
- D. No CVE is present, so it is a false positive caused by Lotus running on a Windows server.

Correct Answer: B

Section: (none)

QUESTION 2

A cybersecurity analyst is conducting a security test to ensure that information regarding the web server is protected from disclosure. The cybersecurity analyst requested an HTML file from the web server, and the response came back as follows:

```
HTTP/1.1 404 Object Not Found
Server: Microsoft-IIS/5.0
Date: Tues, 19 Apr 2016 06:32:24 GMT
Content-Type: text/html
Content-Length: 111
<html><head><title>Site Not Found</title></head>
<body>No web site is configured at this address. </body></html>
```

Which of the following actions should be taken to remediate this security issue?

<https://www.gratisexam.com/>

- A. Set "Allowlatescanning" to 1 in the URLScan.ini configuration file.
- B. Set "Removeserverheader" to 1 in the URLScan.ini configuration file.
- C. Set "Enablelogging" to 0 in the URLScan.ini configuration file.
- D. Set "Perprocesslogging" to 1 in the URLScan.ini configuration file.

Correct Answer: B

QUESTION 3

A cybersecurity professional typed in a URL and discovered the admin panel for the e-commerce application is accessible over the open web with the default password. Which of the following is the MOST secure solution to remediate this vulnerability?

- A. Rename the URL to a more obscure name, whitelist all corporate IP blocks, and require two-factor authentication.
- B. Change the default password, whitelist specific source IP addresses, and require two-factor authentication.
- C. Whitelist all corporate IP blocks, require an alphanumeric passphrase for the default password, and require two-factor authentication.
- D. Change the username and default password, whitelist specific source IP addresses, and require two-factor authentication.

QUESTION 4

An organization is requesting the development of a disaster recovery plan. The organization has grown and so has its infrastructure. Documentation, policies, and procedures do not exist. Which of the following steps should be taken to assist in the development of the disaster recovery plan?

- A. Conduct a risk assessment.
- B. Develop a data retention policy.
- C. Execute vulnerability scanning.
- D. Identify assets.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 5

A company wants to update its acceptable use policy (AUP) to ensure it relates to the newly implemented password standard, which requires sponsored authentication of guest wireless devices. Which of the following is MOST likely to be incorporated in the AUP?

- A. Sponsored guest passwords must be at least ten characters in length and contain a symbol.
- B. The corporate network should have a wireless infrastructure that uses open authentication standards.
- C. Guests using the wireless network should provide valid identification when registering their wireless devices.
- D. The network should authenticate all guest users using 802.1x backed by a RADIUS or LDAP server.

Correct Answer: C

Section: (none)

Explanation/Reference:

Explanation:

QUESTION 6

After completing a vulnerability scan, the following output was noted:

```
CVE-2011-3389
QID 42366 - SSLv3.0 / TLSv1.0 Protocol weak CBC mode Server side vulnerability

Check with:

openssl s_client -connect qualys.jive.mobile.com:443 -tls1 -cipher "AES:CAMELLIA:SEED:3DES:DES"
```

Which of the following vulnerabilities has been identified?

- A. PKI transfer vulnerability.
- B. Active Directory encryption vulnerability.
- C. Web application cryptography vulnerability.
- D. VPN tunnel vulnerability.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 7

A security analyst is adding input to the incident response communication plan. A company officer has suggested that if a data breach occurs, only affected parties should be notified to keep an incident from becoming a media headline. Which of the following should the analyst recommend to the company officer?

- A. The first responder should contact law enforcement upon confirmation of a security incident in order for a forensics team to preserve chain of custody.
- B. Guidance from laws and regulations should be considered when deciding who must be notified in order to avoid fines and judgements from non-compliance.
- C. An externally hosted website should be prepared in advance to ensure that when an incident occurs victims have timely access to notifications from a non-compromised recourse.
- D. The HR department should have information security personnel who are involved in the investigation of the incident sign non-disclosure agreements so the company cannot be held liable for customer data that might be viewed during an investigation.

Correct Answer: A

QUESTION 8

A company has recently launched a new billing invoice website for a few key vendors. The cybersecurity analyst is receiving calls that the website is performing slowly and the pages sometimes time out. The analyst notices the website is receiving millions of requests, causing the service to become unavailable. Which of the following can be implemented to maintain the availability of the website?

- A. VPN
- B. Honeypot
- C. Whitelisting
- D. DMZ
- E. MAC filtering

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 9

A security audit revealed that port 389 has been used instead of 636 when connecting to LDAP for the authentication of users. The remediation recommended by the audit was to switch the port to 636 wherever technically possible. Which of the following is the BEST response?

- A. Correct the audit. This finding is a well-known false positive; the services that typically run on 389 and 636 are identical.
- B. Change all devices and servers that support it to 636, as encrypted services run by default on 636.
- C. Change all devices and servers that support it to 636, as 389 is a reserved port that requires root access and can expose the server to privilege escalation attacks.
- D. Correct the audit. This finding is accurate, but the correct remediation is to update encryption keys on each of the servers to match port 636.

Correct Answer: B

QUESTION 14

A system administrator recently deployed and verified the installation of a critical patch issued by the company's primary OS vendor. This patch was supposed to remedy a vulnerability that would allow an adversary to remotely execute code from over the network. However, the administrator just ran a vulnerability

assessment of networked systems, and each of them still reported having the same vulnerability. Which of the following is the MOST likely explanation for this?

- A. The administrator entered the wrong IP range for the assessment.
- B. The administrator did not wait long enough after applying the patch to run the assessment.
- C. The patch did not remediate the vulnerability.
- D. The vulnerability assessment returned false positives.

QUESTION 16

An administrator has been investigating the way in which an actor had been exfiltrating confidential data from a web server to a foreign host. After a thorough forensic review, the administrator determined the server's BIOS had been modified by rootkit installation. After removing the rootkit and flashing the BIOS to a known good state, which of the following would BEST protect against future adversary access to the BIOS, in case another rootkit is installed?

- A. Anti-malware application
- B. Host-based IDS
- C. TPM data sealing
- D. File integrity monitoring

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 17

A security analyst is reviewing the following log after enabling key-based authentication.

```
Dec 21 11:00:57 comptia sshd[5657]: Failed password for root from  
95.58.255.62 port 38980 ssh2  
Dec 21 20:08:26 comptia sshd[5768]: Failed password for root from  
91.205.189.15 port 38156 ssh2  
Dec 21 20:08:30 comptia sshd[5770]: Failed password for nobody from  
91.205.189.15 port 38556 ssh2  
Dec 21 20:08:34 comptia sshd[5772]: Failed password for invalid user  
asterisk from 91.205.189.15 port 38864 ssh2  
Dec 21 20:08:38 comptia sshd[5774]: Failed password for invalid user  
sjobeck from 91.205.189.15 port 39157 ssh2  
Dec 21 20:08:42 comptia sshd[5776]: Failed password for root from  
91.205.189.15 port 39467 ssh2
```

Given the above information, which of the following steps should be performed NEXT to secure the system?

- A. Disable anonymous SSH logins.
- B. Disable password authentication for SSH.
- C. Disable SSHv1.
- D. Disable remote root SSH logins.

QUESTION 49

Given the following output from a Linux machine:

```
file2cable -i eth0 -f file.pcap
```

Which of the following BEST describes what a security analyst is trying to accomplish?

- A. The analyst is attempting to measure bandwidth utilization on interface `eth0`.
- B. The analyst is attempting to capture traffic on interface `eth0`.
- C. The analyst is attempting to replay captured data from a PCAP file.
- D. The analyst is attempting to capture traffic for a PCAP file.
- E. The analyst is attempting to use a protocol analyzer to monitor network traffic.

Correct Answer: E

QUESTION 52

An organization uses Common Vulnerability Scoring System (CVSS) scores to prioritize remediation of vulnerabilities.

Management wants to modify the priorities based on a difficulty factor so that vulnerabilities with lower CVSS scores may get a higher priority if they are easier to implement with less risk to system functionality. Management also wants to quantify the priority. Which of the following would achieve management's objective?

- A. $(\text{CVSS Score}) * \text{Difficulty} = \text{Priority}$
Where Difficulty is a range from 0.1 to 1.0 with 1.0 being easiest and lowest risk to implement
- B. $(\text{CVSS Score}) * \text{Difficulty} = \text{Priority}$
Where Difficulty is a range from 1 to 5 with 1 being easiest and lowest risk to implement
- C. $(\text{CVSS Score}) / \text{Difficulty} = \text{Priority}$
Where Difficulty is a range from 1 to 10 with 10 being easiest and lowest risk to implement
- D. $((\text{CVSS Score}) * 2) / \text{Difficulty} = \text{Priority}$
Where CVSS Score is weighted and Difficulty is a range from 1 to 5 with 5 being easiest and lowest risk to implement

Correct Answer: C

QUESTION 53

A cybersecurity consultant is reviewing the following output from a vulnerability scan against a newly installed MS SQL Server 2012 that is slated to go into production in one week:

Summary

The remote MS SQL server is vulnerable to the Hello overflow

Solution

Install Microsoft Patch Q316333 or disable the Microsoft SQL Server service or use a firewall to protect the MS SQL port

References

MSB: MS02-043, MS02-056, MS02-061

CVE: CVE-2002-1123

BID: 5411

Other: IAVA 2002-B-0007

Based on the above information, which of the following should the system administrator do? (Select TWO).

- A. Verify the vulnerability using penetration testing tools or proof-of-concept exploits.
- B. Review the references to determine if the vulnerability can be remotely exploited.
- C. Mark the result as a false positive so it will show in subsequent scans.
- D. Configure a network-based ACL at the perimeter firewall to protect the MS SQL port.
- E. Implement the proposed solution by installing Microsoft patch Q316333.

QUESTION 57

A company invested ten percent of its entire annual budget in security technologies. The Chief Information Officer (CIO) is convinced that, without this investment, the company will risk being the next victim of the same cyber attack its competitor experienced three months ago. However, despite this investment, users are sharing their usernames and passwords with their coworkers to get their jobs done. Which of the following will eliminate the risk introduced by this practice?

- A. Invest in and implement a solution to ensure non-repudiation
- B. Force a daily password change
- C. Send an email asking users not to share their credentials
- D. Run a report on all users sharing their credentials and alert their managers of further actions

Correct Answer: C

QUESTION 70

A security analyst is reviewing logs and discovers that a company-owned computer issued to an employee is generating many alerts and warnings. The analyst continues to review the log events and discovers that a non-company-owned device from a different, unknown IP address is generating the same events. The analyst informs the manager of these findings, and the manager explains that these activities are already known and part of an ongoing events. Given this scenario, which of the following roles are the analyst, the employee, and the manager filling?

- A. The analyst is red team.
The employee is blue team.
The manager is white team.
- B. The analyst is white team.
The employee is red team.
The manager is blue team.
- C. The analyst is red team.
The employee is white team.
The manager is blue team.
- D. The analyst is blue team.
The employee is red team.
The manager is white team.

Correct Answer: D

Section: (none)

QUESTION 71

A technician receives the following security alert from the firewall's automated system:

match_time: 10/10/16 16:20:43
serial: 002301028176
device_name: COMPSEC1
type: CORRELATION
scruser: domain\samjones
scr: 10.50.50.150
object_name: Beacon Detection
object_id: 6005
category: compromised-host
severity: medium
evidence: Host repeatedly visited a dynamic DNS domain (17 times).

After reviewing the alert, which of the following is the BEST analysis?

- A. This alert is a false positive because DNS is a normal network function.
- B. This alert indicates a user was attempting to bypass security measures using dynamic DNS.
- C. This alert was generated by the SIEM because the user attempted too many invalid login attempts.
- D. This alert indicates an endpoint may be infected and is potentially contacting a suspect host.

Correct Answer: D

QUESTION 72

During a review of security controls, an analyst was able to connect to an external, unsecured FTP server from a workstation. The analyst was troubleshooting and reviewed the ACLs of the segment firewall the workstation is connected to:

Seq	Direction	Source IP/Mask	Dest IP/Mask	Protocol	Src Port
1	In	10.1.1.0/255.255.255.0	172.21.50.5/255.255.255.255	17	0-65535
2	Out	172.21.50.5/255.255.255.255	10.1.1.0/255.255.255.0	17	53-53
3	In	10.40.40.0/255.255.255.0	10.1.1.0/255.255.255.0	17	3389-3389
4	Out	10.1.1.0/255.255.255.0	10.1.1.0/255.255.255.0	17	0-65535
5	In	10.40.40.0/255.255.255.0	10.1.1.0/255.255.255.0	6	3389-3389
6	Out	10.1.1.0/255.255.255.0	10.40.40.0/255.255.255.0	6	0-65535
7	In	10.40.40.0/255.255.255.0	10.1.1.0/255.255.255.0	6	0-65535
8	Out	10.1.1.0/255.255.255.0	0.0.0.0/0.0.0.0	6	0-65535
9	Out	10.1.1.0/255.255.255.0	0.0.0.0/0.0.0.0	6	0-65535
10	Any	0.0.0.0/0.0.0.0	0.0.0.0/0.0.0.0	1	0-65535

Based on the ACLs above, which of the following explains why the analyst was able to connect to the FTP server?

- A. FTP was explicitly allowed in Seq 8 of the ACL.
- B. FTP was allowed in Seq 10 of the ACL.
- C. FTP was allowed as being included in Seq 3 and Seq 4 of the ACL.
- D. FTP was allowed as being outbound from Seq 9 of the ACL.

Correct Answer: A

QUESTION 75

A company has several internal-only, web-based applications on the internal network. Remote employees are allowed to connect to the internal corporate network with a company-supplied VPN client. During a project to upgrade the internal application, contractors were hired to work on a database server and were given copies of the VPN client so they could work remotely. A week later, a security analyst discovered an internal web-server had been compromised by malware that originated from one of the contractor's laptops. Which of the following changes should be made to BEST counter the threat presented in this scenario?

- A. Create a restricted network segment for contractors, and set up a jump box for the contractors to use to access internal resources.
- B. Deploy a web application firewall in the DMZ to stop Internet-based attacks on the web server.
- C. Deploy an application layer firewall with network access control lists at the perimeter, and then create alerts for suspicious Layer 7 traffic.
- D. Require the contractors to bring their laptops on site when accessing the internal network instead of using the VPN from a remote location.
- E. Implement NAC to check for updated anti-malware signatures and location-based rules for PCs connecting to the internal network.

Correct Answer: E

Explanation/Reference:

QUESTION 83

HOTSPOT

A security analyst performs various types of vulnerability scans.

You must review the vulnerability scan results to determine the type of scan that was executed and determine if a false positive occurred for each device.

Instructions:

Select the Results Generated drop-down option to determine if the results were generated from a credentialed scan, non-credentialed scan, or a compliance scan.

For ONLY the credentialed and non-credentialed scans, evaluate the results for false positives and check the findings that display false positives. NOTE: If you would like to uncheck an option that is currently selected, click on the option a second time.

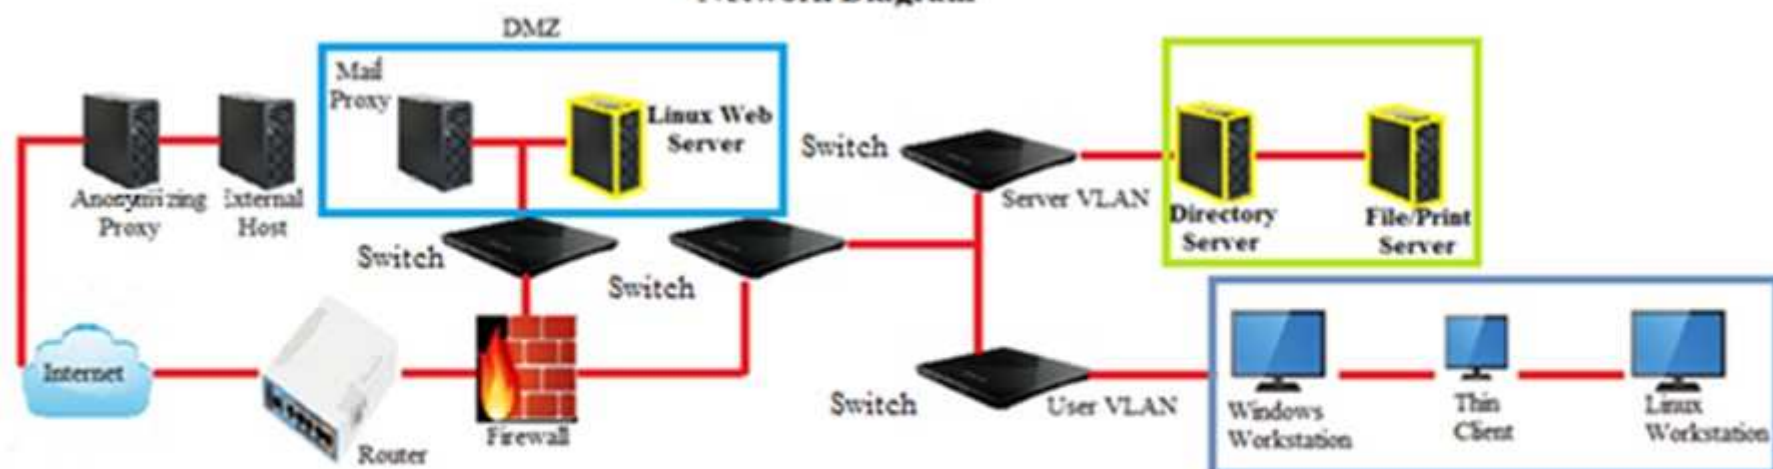

Lastly, based on the vulnerability scan results, identify the type of Server by dragging the Server to the results.
The Linux Web Server, File-Print Server and Directory Server are draggable.

If at any time you would like to bring back the initial state of the simulation, please select the Reset button. When you have completed the simulation, please select the Done button to submit. Once the simulation is submitted, please select the Next button to continue.

Section: (none)

Explanation

Explanation/Reference:

Explanation:

1. non-credentialed scan - File Print Server: False positive is first bullet point.
2. credentialed scan – Linux Web Server: No False positives.
3. Compliance scan - Directory Server

QUESTION 84

A Chief Information Security Officer (CISO) wants to standardize the company's security program so it can be objectively assessed as part of an upcoming audit requested by management.

Which of the following would holistically assist in this effort?

- A. ITIL
- B. NIST
- C. Scrum
- D. AUP
- E. Nessus

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 85

A cybersecurity analyst was hired to resolve a security issue within a company after it was reported that many employee account passwords had been compromised. Upon investigating the incident, the cybersecurity analyst found that a brute force attack was launched against the company.

Which of the following remediation actions should the cybersecurity analyst recommend to senior management to address these security issues?

- A. Prohibit password reuse using a GPO.
- B. Deploy multifactor authentication.
- C. Require security awareness training.
- D. Implement DLP solution.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 86

Scan results identify critical Apache vulnerabilities on a company's web servers. A security analyst believes many of these results are false positives because the web environment mostly consists of Windows servers.

Which of the following is the BEST method of verifying the scan results?

- A. Run a service discovery scan on the identified servers.
- B. Refer to the identified servers in the asset inventory.
- C. Perform a top-ports scan against the identified servers.
- D. Review logs of each host in the SIEM.

Correct Answer: A

QUESTION 87

A security analyst at a small regional bank has received an alert that nation states are attempting to infiltrate financial institutions via phishing campaigns. Which of the following techniques should the analyst recommend as a proactive measure to defend against this type of threat?

- A. Honeypot
- B. Location-based NAC
- C. System isolation
- D. Mandatory access control
- E. Bastion host

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 88

A cybersecurity analyst is reviewing log data and sees the output below:

```
POST:// payload.php HTTP/1.1
HOST: localhost
Accept: */*
Referrer: http://localhost
*****
HTTP /1.1 403 Forbidden
connection : close
```

Which of the following technologies MOST likely generated this log?

- A. Stateful inspection firewall
- B. Network-based intrusion detection system
- C. Web application firewall
- D. Host-based intrusion detection system

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 89

A security analyst is reviewing a report from the networking department that describes an increase in network utilization, which is causing network performance issues on some systems. A top talkers report over a five-minute sample is included.

Source	Destination	Application	Packets	Volume (Kbps)
8.4.4.100	172.16.1.25	SMTP	4386	6141
96.23.114.14	172.16.1.1	IPSec	7734	10827
172.16.1.101	100.15.25.34	HTTP	3412	4776
96.23.114.18	172.16.1.1	IPSec	2723	3812
172.16.1.101	100.15.25.34	SSL	8697	12176
172.16.1.222	203.67.121.12	Quicktime	1302	1822
172.16.1.197	113.121.12.15	8180/tcp	6045	8463
172.16.1.131	172.16.1.67	DHCP	25	35
172.16.1.25	172.16.1.53	DNS	66	93

Given the above output of the sample, which of the following should the security analyst accomplish FIRST to help track down the performance issues?

- A. Perform reverse lookups on each of the IP addresses listed to help determine if the traffic is necessary.
- B. Recommend that networking block the unneeded protocols such as Quicktime to clear up some of the congestion.
- C. Put ACLs in place to restrict traffic destined for random or non-default application ports.
- D. Quarantine the top talker on the network and begin to investigate any potential threats caused by the excessive traffic.

Correct Answer: A

Section: (none)

Explanation

QUESTION 90

During the forensic a phase of a security investigation, it was discovered that an attacker was able to find private keys on a poorly secured team shared drive. The attacker used those keys to intercept and decrypt sensitive traffic on a web server. Which of the following describes this type of exploit and the potential remediation?

- A. Session hijacking; network intrusion detection sensors
- B. Cross-site scripting; increased encryption key sizes
- C. Man-in-the-middle; well-controlled storage of private keys
- D. Rootkit; controlled storage of public keys

Correct Answer: C

Section: (none)

Explanation**Explanation/Reference:****QUESTION 91**

A penetration tester is preparing for an audit of critical systems that may impact the security of the environment. This includes the external perimeter and the internal perimeter of the environment. During which of the following processes is this type of information normally gathered?

- A. Timing
- B. Scoping
- C. Authorization
- D. Enumeration

Correct Answer: B

Section: (none)

Explanation**Explanation/Reference:****QUESTION 92**

A red team actor observes it is common practice to allow cell phones to charge on company computers, but access to the memory storage is blocked. Which of the following are common attack techniques that take advantage of this practice? (Choose two.)

- A. A USB attack that tricks the computer into thinking the connected device is a keyboard, and then sends characters one at a time as a keyboard to launch the attack (a prerecorded series of keystrokes)
- B. A USB attack that turns the connected device into a rogue access point that spoofs the configured wireless SSIDs
- C. A Bluetooth attack that modifies the device registry (Windows PCs only) to allow the flash drive to mount, and then launches a Java applet attack
- D. A Bluetooth peering attack called "Snarfing" that allows Bluetooth connections on blocked device types if physically connected to a USB port
- E. A USB attack that tricks the system into thinking it is a network adapter, then runs a user password hash gathering utility for offline password cracking

Correct Answer: CD

Section: (none)

Explanation**Explanation/Reference:**

QUESTION 93

Company A suspects an employee has been exfiltrating PII via a USB thumb drive. An analyst is tasked with attempting to locate the information on the drive. The PII in question includes the following:

comp@mail.com	564-23-4765
tia@mail.com	754-09-3276
puter@mail.com	143-32-2323
sam@mail.com	545-11-0192
jim@mail.com	093-45-3748

Which of the following would BEST accomplish the task assigned to the analyst?

- A. 3 [0-9] \d-2 [0-9] \d-4 [0-9] \d
- B. \d (3) -\d (2) -\d (4)
- C. ? [3] -? [2] -? [3]
- D. \d [9] 'xxx-xx-xx'

Correct Answer: B

QUESTION 101

During an investigation, a computer is being seized. Which of the following is the FIRST step the analyst should take?

- A. Power off the computer and remove it from the network.
- B. Unplug the network cable and take screenshots of the desktop.
- C. Perform a physical hard disk image.
- D. Initiate chain-of-custody documentation.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 102

A security analyst has determined the security team should take action based on the following log:

```
Host          192.168.2.7
[00:00:01]    successful      login:015  192.168.2.7: local
[00:00:02]    unsuccessful   login:022  222.34.56.8: RDP 192.168.2.8
[00:00:04]    unsuccessful   login:010  222.34.56.8: RDP 192.168.2.8
[00:00:06]    unsuccessful   login:015  222.34.56.8: RDP 192.168.2.8
[00:00:09]    unsuccessful   login:012  222.34.56.8: RDP 192.168.2.8
```

Which of the following should be used to improve the security posture of the system?

- A. Enable login account auditing.
- B. Limit the number of unsuccessful login attempts.
- C. Upgrade the firewalls.
- D. Increase password complexity requirements.

Correct Answer: B

QUESTION 103

A medical organization recently started accepting payments over the phone. The manager is concerned about the impact of the storage of different types of data. Which of the following types of data incurs the highest regulatory constraints?

- A. PHI
- B. PCI
- C. PII
- D. IP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 104

An organization wants to remediate vulnerabilities associated with its web servers. An initial vulnerability scan has been performed, and analysts are reviewing the results. Before starting any remediation, the analysts want to remove false positives to avoid spending time on issues that are not actual vulnerabilities. Which of the following would be an indicator of a likely false positive?

- A. Reports indicate that findings are informational.
- B. Any items labeled 'low' are considered informational only.
- C. The scan result version is different from the automated asset inventory.
- D. 'HTTPS' entries indicate the web page is encrypted securely.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 105

A newly discovered malware has a known behavior of connecting outbound to an external destination on port 27500 for the purpose of exfiltrating data. The following are four snippets taken from running `netstat -an` on separate Windows workstations:

Workstation A:

Proto	Local Address	Foreign Address	State
TCP	10.1.2.3:49321	EXTERNALIP:27500	ESTABLISHED
TCP	10.1.2.3:49321	EXTERNALIP:27500	ESTABLISHED
TCP	10.1.2.3:49323	EXTERNALIP:27500	ESTABLISHED
TCP	10.1.2.3:49324	EXTERNALIP:27500	ESTABLISHED
TCP	10.1.2.3:49325	EXTERNALIP:27500	ESTABLISHED

Workstation B:

Proto	Local Address	Foreign Address	State
TCP	:::135	:::0	Listening
TCP	:::445	:::0	Listening
TCP	:::27500	:::0	Listening

Workstation C:

Proto	Local Address	Foreign Address	State
TCP	:::135	:::0	Listening
TCP	:::445	:::0	Listening
TCP	:::27500	:::0	Listening

Workstation D:

Proto	Local Address	Foreign Address	State
TCP	10.1.2.5:27500	EXTERNALIP2:443	ESTABLISHED
TCP	10.1.2.5:27501	EXTERNALIP2:443	ESTABLISHED
TCP	10.1.2.5:27502	EXTERNALIP2:443	ESTABLISHED

Based on the above information, which of the following is MOST likely to be exposed to this malware?

- A. Workstation A
- B. Workstation B
- C. Workstation C
- D. Workstation D

Correct Answer: A

Given a packet capture of the following scan:

```
nmap -sX 192.168.1.55 -p22,80,445
```

```
45 33.105540 192.168.1.115 192.168.1.55 TCP 54 39007 -> 80 [FIN, PSH, URG] Seq=1 Win=1024 Urg=0 Len=0
46 33.106599 192.168.1.115 192.168.1.55 TCP 54 39007 -> 445 [FIN, PSH, URG] Seq=1 Win=1024 Urg=0 Len=0
47 33.107672 192.168.1.115 192.168.1.55 TCP 54 39007 -> 22 [FIN, PSH, URG] Seq=1 Win=1024 Urg=0 Len=0
48 33.108730 192.168.1.55 192.168.1.115 TCP 54 445 -> 39007 [RST, ACK] Seq=1 Ack=2 Urg=0 Len=0
49 33.108972 192.168.1.55 192.168.1.115 TCP 54 22 -> 39007 [RST, ACK] Seq=1 Ack=2 Urg=0 Len=0
50 34.207377 192.168.1.115 192.168.1.55 TCP 54 39008 -> 80 [FIN, PSH, URG] Seq=1 Win=1024 Urg=0 Len=0
```

Which of the following should MOST likely be inferred on the scan's output?

- A. 192.168.1.115 is hosting a web server.
- B. 192.168.1.55 is hosting a web server.
- C. 192.168.1.55 is a Linux server.
- D. 192.168.1.55 is a file server.

Correct Answer: D

QUESTION 118

While reviewing web server logs, a security analyst notices the following code:

```
GET http://testphp.comptia.org/profiles.php?id=-1 UNION SELECT 1, 2, 3 HTTP/1.1
Host: testphp.comptia.org
```

Which of the following would prevent this code from performing malicious actions?

- A. Performing web application penetration testing
- B. Requiring the application to use input validation
- C. Disabling the use of HTTP and requiring the use of HTTPS
- D. Installing a network firewall in front of the application

Correct Answer: C

QUESTION 119

The board of directors made the decision to adopt a cloud-first strategy. The current security infrastructure was designed for on-premise implementation. A critical application that is subject to the Federal Information Security Management Act (FISMA) of 2002 compliance has been identified as a candidate for a hybrid cloud deployment model. Which of the following should be conducted FIRST?

- A. Develop a request for proposal.
- B. Perform a risk assessment.
- C. Review current security controls.
- D. Review the SLA for FISMA compliance.

Correct Answer: C

QUESTION 120

NOTE: Question IP must be 192.168.192.123

During a network reconnaissance engagement, a penetration tester was given perimeter firewall ACLs to accelerate the scanning process. The penetration tester has decided to concentrate on trying to brute force log in to destination IP address 192.168.192.132 via secure shell.

```
access-list outside-acl permit tcp any host 192.168.192.123 eq https
access-list outside-acl permit tcp 10.10.10.0 mask 255.255.255.0 host 192.168.192.123 eq ssh
access-list outside-acl permit tcp 10.10.10.0 mask 255.255.255.0 host 192.168.192.123 eq www
access-list outside-acl permit tcp host 192.168.192.123 eq ssh
```

Given a source IP address of 10.10.10.30, which of the following ACLs will permit this access?

- A. `access-list outside-acl permit tcp any host 192.168.192.123 eq https`
- B. `access-list outside-acl permit tcp 10.10.10.0 mask 255.255.255.0 host 192.168.192.123 eq www`

- C. `access-list outside-acl permit tcp 10.10.10.0 mask 255.255.255.0 host 192.168.192.123 eq ssh`
- D. `access-list outside-acl permit tcp host 10.10.10.0 mask 255.255.255.0 host 192.168.192.123 eq ssh`

Correct Answer: C

QUESTION 121

An analyst is preparing for a technical security compliance check on all Apache servers. Which of the following will be the BEST to use?

- A. CIS benchmark
- B. Nagios
- C. OWASP
- D. Untidy
- E. Cain & Abel

Correct Answer: A

QUESTION 122

A security analyst is performing ongoing scanning and continuous monitoring of the corporate datacenter. Over time, these scans are repeatedly showing susceptibility to the same vulnerabilities and an increase in new vulnerabilities on a specific group of servers that are clustered to run the same application. Which of the following vulnerability management processes should be implemented?

- A. Frequent server scanning
- B. Automated report generation
- C. Group policy modification
- D. Regular patch application

Correct Answer: D

QUESTION 123

Which of the following describes why it is important to include scope within the rules of engagement of a penetration test?

- A. To ensure the network segment being tested has been properly secured
- B. To ensure servers are not impacted and service is not degraded
- C. To ensure all systems being scanned are owned by the company
- D. To ensure sensitive hosts are not scanned

Correct Answer: C

QUESTION 124

A cybersecurity analyst develops a regular expression to find data within traffic that will alarm on a hit.

```
^(?:4[0-9]{12}(?:[0-9]{3})?(?:5[1-5][0-9]{2}))$
```

The SIEM alarms on seeing this data in cleartext between the web server and the database server.

```
'4554-8795-1596-7948'
```

```
'3723-159786-57984'
```

Which of the following types of data would the analyst MOST likely to be concerned with, and to which type of data classification does it belong?

- A. Credit card numbers that are PCI
- B. Social security numbers that are PHI
- C. Credit card numbers that are PII
- D. Social security numbers that are PII

Correct Answer: A

QUESTION 125

The development team recently moved a new application into production for the accounting department. After this occurred, the Chief Information Officer (CIO) was contacted by the head of accounting because the application is missing a key piece of functionality that is needed to complete the corporation's quarterly tax returns. Which of the following types of testing would help prevent this from reoccurring?

- A. Security regression testing
- B. User acceptance testing
- C. Input validation testing
- D. Static code testing

Correct Answer: B
