Number: SK0-003
Passing Score: 800
Time Limit: 120 min
File Version: 16.04

<http://www.gratisexam.com/>

Exam Code: SK0-003

Exam Name: CompTIA Server+ (2010 Edition)

Last Update: Oct, 02, 2013

Exam A CompTIA SK0-003

QUESTION 1

Which of the following will corrupt the BIOS?

- A. Applying the BIOS settings in the incorrect order
- B. Power being lost during the upgrade process
- C. Installing the OS before applying the BIOS upgrade
- D. Imaging the system after performing a BIOS upgrade

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 2

An administrator reboots a ten drive server, with a RAID 10 array, after a power failure and receives an error logical drive failed. Which of the following is the MOST likely cause?

- A. Corrupt file system table
- B. Backplane failure
- C. Multiple drive failure
- D. Bad cable

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 3

Which of the following RAID levels would provide the BEST performance with no fault protection?

- A. RAID 0
- B. RAID 1
- C. RAID 3
- D. RAID 5

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 4

Which of the following internal storage technologies has the HIGHEST single drive storage capacity?

- A. SAS

- B. SATA
- C. Flash
- D. SCSI

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 5

Which of the following backup types will not reset the archive bit on backed up files?

- A. GFS
- B. Full
- C. Differential
- D. Incremental

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 6

A server has been assigned the 192.168.100.127/25 IP address. The server is experiencing strange network connectivity related problems. Which of the following would BEST describe the problem?

<http://www.gratisexam.com/>

- A. IP address is classful.
- B. IP address is a subnet broadcast address.
- C. IP address is a subnet network address.
- D. IP address is classless

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 7

An administrator is planning to bring a newly purchased server online. Which of the following should the administrator do FIRST?

- A. Follow the pre-installation plan and procedures.
- B. Review the system logs to check for errors.
- C. Notify all users that the old system will be taken offline.
- D. Apply all security updates to the system.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 8

Which of the following describes the purpose of a network topology diagram?

- A. To display the logical layout this can differ from the physical layout
- B. To enhance a user's understanding of the datacenter layout
- C. To create a physical map of the datacenter to provide to guests
- D. To provide a blueprint for recreating the same server setup for another client

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 9

Which of the following are ways to transport SAN traffic? (Select TWO)

- A. SATA
- B. iSCSI
- C. SCSI
- D. Fiber channel
- E. PAT A

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 10

Which of the following can limit cabling mistakes?

- A. Proper labeling
- B. Asset management
- C. Keeping good vendor logs
- D. Keeping up-to-date repair logs

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 11

In which of the following configurations should a SAS hard drive jumper be placed for single drive operation?

- A. The jumpers should be placed in the single/master position.
"Certification Depends on Only One Thing" - www.actualanswers.com 38 CompTIA SK0-003 Exam
- B. There are no configuration jumpers needed on a SAS hard drive.
- C. The jumpers should be placed to give the drive a SCSI ID of 1.
- D. The jumpers should be placed in the slave position.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 12

An administrator has purchased monitoring software that can be configured to send alerts when hardware and applications are having issues. Which of the following must be installed on the monitoring server so that it can properly monitor details on vendor specific devices?

- A. MIBs
- B. SMTP
- C. WMI
- D. DHCP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 13

A server will not power on. Which of the following devices should the administrator use FIRST to determine the problem?

- A. Loop back plugs
- B. Power supply tester
- C. System logs
- D. TDR

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 14

When troubleshooting hardware issues with a server, which of the following is MOST likely to cause a problem in receiving vendor support?

- A. Third party cables
- B. Third party memory
- C. Signed drivers
- D. Server type

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 15

Which of the following is BEST described as a storage system that can be connected to multiple servers through a fiber channel?

- A. JBOD
- B. SAN
- C. DAS
- D. NAS

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 16

Which of the following file systems are native to *nix?

- A. FAT
- B. EXT3
- C. NTFS
- D. FAT32

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 17

Which of the following will allow a server to continue to function if a stick of memory fails? (Select TWO)

- A. Chipkill
- B. Memory RAID

- C. Registered memory
- D. ECC
- E. Hot spare

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 18

An administrator is running proprietary server software that requires services to be reconfigured every time the server is upgraded to the latest vendor version. Which of the following is the BEST solution to address this problem?

- A. The current system configuration should be documented for future use.
- B. Server diagramming and environmental topologies should be documented.
- C. A copy of the latest pre-installation plan should be developed and utilized.
- D. Vendor support should be contacted so that they can correct the issue.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 19

An administrator identifies that a server is shutting down. The administrator powers up the server and OS loads but after a few minutes it powers down again. Which of the following is the cause?

- A. Redundant power supply failure
- B. CPU overheating
- C. Memory failure
- D. Hard disk failure

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 20

A new array of hard drives has been added to an existing server; however, when the server is booted into the Windows OS the new drives fail to appear in My Computer. From which of the following locations can the new storage drives be added? (Select TWO).

- A. Format command
- B. Hypervisor
- C. Computer Management
- D. Disk Management

E. Virtual Center

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 21

Which of the following RAID arrays performs mirroring of the disks first, then striping of the disks?

- A. RAID 1
- B. RAID 0+1
- C. RAID 6
- D. RAID 10

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 22

A server is experiencing an undetermined problem. Which of the following steps should the technician take in order to identify whether it is a software or hardware problem?

- A. Reseat all main components
- B. Try to replicate the problem
- C. Flash the BIOS
- D. Reinstall the operating system

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 23

After applying a new driver to a NIC, the server reboots and fails to restart. Which of the following is the BEST way to resolve the problem?

- A. Boot using recovery console and restore the previous driver.
- B. Boot the server, press F8 and access last known good configuration.
- C. Restore the server using last backup tape.
- D. Boot the server with ASR option.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 24

Which of the following should an administrator utilize FIRST after installing a new HBA?

- A. New Technology File Systems (NTFS)
- B. Digitally signed device drivers
- C. Virtual machine components
- D. Multiple RAID configurations

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 25

An administrator is required to backup 250GB nightly utilizing a single LTO2 tape. The administrator reports that the tape drive is running out of available space before the job completes. Which of the following would allow the administrator to backup this data? (Select TWO).

- A. Enable compression on the LTO2 drive
- B. Utilize LTO3 tapes in the existing drive
- C. Reduce the amount of data on the backup
- D. Replace the LTO2 with LTO3 drive and tapes
- E. Divide the data and back up half one night and half the next

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 26

Which of the following bottlenecks would MOST likely cause excessive hard drive activity?

- A. Inadequate RAM
- B. Slow processor
- C. PCI bus
- D. Excessive network traffic

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 27

A technician has found that the uninterruptible power supply (UPS) connected to a server does not have sufficient battery power to allow the server to shutdown gracefully. Which of the following is the MOST cost effective way to allow this server to shutdown gracefully?

- A. Install a second UPS.
- B. Increase the size of the swapfile.
- C. Increase the size of the pagefile.
- D. Install an extended battery pack into the UPS

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 28

Fibre channel requires which of the following elements?

- A. FC Initiator
- B. Multi-Mode fibre
- C. Physical Adapter
- D. Fibre Target Management Agent

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 29

Which of the following is an environmental server maintenance task that should be performed every three months?

- A. Replace the rubber mats in the server room
- B. Clean the servers to limit dust buildup
- C. Wash the outside of the servers
- D. Replace the server fans

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 30

Which of the following is a disadvantage of RAID 10?

- A. Poor performance
- B. No fault tolerance
- C. Not supported by many RAID controllers
- D. Higher cost

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 31

Which of the following will allow devices to be added without turning the server off?

- A. Plug and Play
- B. Warm site
- C. Hot plug
- D. Hot site

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 32

Which of the following is a bus mastering method? (Select TWO).

- A. A device transfers data directly to the memory.
- B. A device handles mediation between the northbridge and the processor.
- C. A device connects to another device without involving the processor.
"Certification Depends on Only One Thing" - www.actualanswers.com 45 CompTIA SK0-003 Exam
- D. A device transfers data to the processor and then on to the memory.
- E. A device handles mediation between the southbridge and the processor

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 33

N NO: 133

Which of the following would an administrator use to configure a server's BIOS settings even if the OS crashes?

- A. VPN
- B. KVM over IP

- C. Telnet
- D. Remote Desktop

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 34

A technician wants to increase the reliability of a DHCP server. Which of the following components should be installed to increase the server's uptime on the network?

- A. Increase the amount of RAM
- B. Use a lower voltage power supply
- C. Add a hardware firewall
- D. Install redundant NICs

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 35

NO: 135

Which of the following should be done before and after a service or repair is performed on a server?

- A. Defrag
- B. IPCONFIG /release
- C. Firmware update
- D. Baseline

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 36

A SAN attached production file server is required to be backed up nightly according to company policy. Recently the data to be backed up has increased to approximately 4TB. Currently, the server has a single attached LTO2 tape drive. Which of the following should the server administrator do to provide enough backup capacity for the nightly job?

- A. Replace the backup software with a more efficient application.
- B. Reduce the amount of data to be backed up.
- C. Replace the LTO2 tape drive with an LTO3 tape drive.

D. Replace the single tape drive with a tape library

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 37

Weekly backups of the system are done on Sundays, and daily backups are done the rest of the week. Which of following backup methods were used if the system crashes on Friday and only requires two backup sets to recover the system?

- A. Incremental and snapshot
- B. Full and differential
- C. Full and incremental
- D. Differential and incremental

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 38

Which of the following is a public IP address?

- A. 172.31.254.40
- B. 10.100.11.1
- C. 192.168.100.1
- D. 172.15.16.76

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 39

A tape drive containing a jammed tape must be taken off-site to be repaired. Which of the following should be considered FIRST?

- A. Downtime necessary to reinstall the repaired drive
- B. Data security policies and procedures
- C. Potential cooling problems due to the missing drive
- D. Redundant or replacement data backup solutions

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 40

Which of the following BEST describes RAID 0?

- A. Striping with parity
- B. Striping with mirroring
- C. Mirroring
- D. Striping

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 41

A user is reporting that access to a file server is much slower than it has been. The system administrator completes a test of the server using a system monitoring tool and compares it to the previously taken baseline. The comparison shows that there are no significant changes in the use of system resources. Which of the following actions should be taken to resolve this user problem?

- A. Add additional RAM to the user PC
- B. Troubleshoot the user PC
- C. Add additional RAM to the server
- D. Add additional hard drive space to the server

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 42

A server has a processor that allows it to calculate two applications at the same time. Which of the following describes this capability of the processor?

- A. Dual processing
- B. Multi-processing
- C. Multi-tasking
- D. Multi-threading

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 43

An administrator recently installed a new array controller into a server. When the server is running POST the controller does not appear as present. Which of the following could be the reason for this?

- A. The server BIOS firmware is out-of-date.
- B. The server does not have the correct drivers.
- C. The server hard drives have not begun to spin.
- D. The server has too little memory installed.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 44

A system administrator needs to maintain 1.2TB of storage for a database server. There are six 250GB drives available in the server for storage space. Which of the following RAID configurations would be the BEST choice given that performance and fault tolerance are important factors?

- A. RAID 1 across drive pairs totaling 3 pairs
- B. RAID 5 across all 6 drives
- C. RAID 10 across all 6 drives
- D. RAID 0 across all 6 drives

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 45

Which of the following offers the MOST redundancy for a system but is also very costly?

- A. RAID implementation
- B. Disk-to-disk replication
- C. Server-to-server clustering
- D. Hot site replication

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 46

Which of the following RAID levels would be the BEST choice if performance was the only determining factor?

- A. RAID 0
- B. RAID 1
- C. RAID 5
- D. RAID 10

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 47

At which of the following times should the administrator refer to the HCL?

- A. Prior to purchasing hardware
- B. Before installation
- C. When installing drivers
- D. After installation

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 48

Which of the following Windows Server 2003 technologies can help with making backups of open files?

- A. Differential backup
- B. Snapshot
- C. VSS
- D. Incremental backup

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 49

STION NO: 149

Which of the following defines memory interleaving?

- A. The distribution of data written across all the memory DIMMs and the L1 cache
- B. The distribution of data written across all the memory DIMMs in one bank
- C. The distribution of data written across all the memory DIMMs and the processor
- D. The distribution of data written across all the memory DIMMs and the L2 cache

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 50

Which of the following BEST describes RAID 10?

- A. Mirroring with striping
- B. Mirroring with fault tolerance
- C. Striping
- D. Striping with distributed parity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 51

An administrator is creating a redundant environment for a current data center. A backup site must be available if the entire data center site should become unavailable. To reduce costs, this backup site does not need to be up and running at all times ready for failover. It must contain equipment and the ability to restore data from the data center. Which of the following site types should be considered to meet these requirements?

- A. Hot site
- B. Warm site
- C. Cold site
- D. Active failover site

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 52

Which of the following is the BEST recovery method for a server that only aggregates report data and stores data on separate servers?

- A. Full
- B. Disk imaging
- C. Incremental
- D. Tape backup

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 53

Which of the following will attach to an EIDE connector?

- A. SATA-2
- B. SAT A
- C. ATA-2
- D. SCSI

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 54

According to best practices, which of the following should be the FIRST step after a full boot into a newly installed Windows Server OS?

- A. Remove the Internet Explorer Enhanced Security configuration.
- B. Disable the Guest account.
- C. Apportion additional storage.
- D. Apply all relevant updates and patches.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 55

A technician wants to compare a new server performance over a period of time. Which of the following should the technician do FIRST?

- A. Monitor processor performance logs
- B. Constantly check the task manager
- C. Use performance server logs
- D. Establish a baseline for the server

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 56

Which of the following is the MOST important factor when considering environmental factors?

- A. Server room access should be limited to authorized personnel.
- B. Servers should be kept in a warm and dark environment.
- C. Remove the floppy drives from the system.
- D. The server administrator should ensure adequate levels of cooling.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 57

In a workgroup, all of the following steps are required for a DHCP server EXCEPT

- A. activate the scopes.
- B. authorize the server.
- C. configure the scopes.
- D. install DHCP service.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 58

Which of the following technologies causes a single processor to appear as multiple processors within System Properties in a Windows Server?

- A. RISC
- B. Multicore
- C. Symmetric multi-processing
- D. Hyper-V

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 59

A company would like to upgrade an old server to a multi-processor box. The server currently has a single 3.0GHz 1Mb cache processor in it with a single empty socket. The only processor that is available from a manufacturer is a 3.0GHz 2Mb cache model. Which of the following is the BEST reason why this upgrade will not work?

- A. The socket size does not match
- B. The cache is from a different manufacturer
- C. The processors do not match
- D. Processors cannot be upgraded after server has been deployed

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 60

A user cannot access files on /deps/it directory, the administrator verifies permissions are set for the directory. Which of the following actions need to be performed to only grant read access to the user on the IT directory?

- A. Set folder permissions to 760.
- B. Set folder permissions to 770.
- C. Set folder permissions to modify
- D. Set folder permissions to full control

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 61

A server is having problems booting into the operating system. Which of the following can provide important information to begin to troubleshoot the cause?

- A. System logs
- B. Firmware updates
- C. POST messages
- D. Application logs

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 62

An administrator is troubleshooting a problem on an application server, but has not determined the cause of the problem and is not able to replicate the problem. Which of the following should the administrator do prior to escalating the issue?

- A. Gather information from users.
- B. Reboot the server.

- C. Apply the latest service packs to the operating system.
- D. Perform a root cause analysis

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 63

In order to provide the lowest access latency, the optimal place for the system swap file is on

- A. an external USB 1.1 4200RPM drive with 8MB of Cache.
- B. the fastest storage device available in the system.
- C. a 10K RPM SCSI Drive with 2MB of Cache.
- D. the operating system partition.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 64

Which of the following is the correct term for a virtual machine?

- A. Hypervisor
- B. Guest OS
- C. Virtual Center
- D. Host OS

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 65

Which of the following actions will prevent a driver from being reinstalled automatically?

- A. Run the disable command.
- B. Disable the device using Device Manager.
- C. Review manufacturer manual.
- D. Reboot the server, logon in Safe Mode, uninstall the driver.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 66

Which of the following is an appropriate reason for adjusting the SNMP thresholds?

- A. To eliminate excessive alerts
- B. To increase the number of threads
- C. To monitor use of VPN traffic
- D. To allow more email to come through

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 67

Which of the following storage interface protocols has the FASTEST speeds?

- A. Ultra2 SCSI
- B. SAT A
- C. Ultra320 SCSI
- D. SAS

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 68

Which of the following protocols is responsible for the resolution of IP addresses to MAC addresses?

- A. DHCP
- B. ARP
- C. DNS
- D. RARP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 69

Users have reported that they cannot access certain Internet sites. An administrator wants to test that the sites are properly resolving to an IP address. Which of the following tools would allow the administrator to test name

resolution?

- A. net view
- B. ipconfig
- C. dig
- D. ifconfig

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 70

Which of the following expansion cards would be necessary to increase fault tolerance in a VoIP server?

- A. Second Modem
- B. Second CPU
- C. Second HBA
- D. Second PBX card

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 71

An administrator needs to add fault tolerance capabilities to a server. Which of the following is the BEST solution to accomplish this?

- A. Move the architecture from 32-bit to 64-bit.
- B. Install a PBX card.
- C. Install a second NIC card.
- D. Install a fail-over cable.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 72

A NAS differs from a SAN because NAS:

- A. is attached to a local disk controller.
- B. does support multipath I/O.
- C. never uses an IP address for network connectivity

D. always uses an IP address to access data.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 73

A company has had problems with their HVAC system being able to cool their datacenter as they have grown. Which of the following could BEST be used to help reduce the load on the HVAC system?

- A. Replacing the CAT5 cables with CAT6 cables
- B. Replacing traditional racks with water cooled racks
- C. Turning off non-critical application servers during non-business hours
- D. Taking the second power supply out of non-critical servers

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 74

Which of the following is the FIRST thing that should be done in order to begin reinstalling TCP/IP on the server?

- A. Configure netsh settings in case of backup
- B. Restart the server
- C. Notify users
- D. Uninstall TCP/IP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 75

A data center has had a power outage. Which of the following should the administrator do FIRST once the power is restored?

- A. Identify which systems are the most critical and bring them up by level of importance.
- B. Retrieve the latest backup tapes for immediate system restore using the GFS rotation.
- C. Identify the least critical systems and then power those systems on first.
- D. Determine the cause of the power outage and install UPS systems to prevent its reoccurrence.

Correct Answer: A

Section: (none)

Explanation**Explanation/Reference:**

Explanation:

QUESTION 76

Which of the following backup methods should be used nightly to ensure backups capture all necessary data in the LEAST amount of time?

- A. Daily
- B. Incremental
- C. Normal
- D. Differential

Correct Answer: B

Section: (none)

Explanation**Explanation/Reference:**

Explanation:

QUESTION 77

Which of the following types of DNS records enables support for email?

- A. A
- B. MX
- C. PTR
- D. AAAA

Correct Answer: B

Section: (none)

Explanation**Explanation/Reference:**

Explanation:

QUESTION 78

Click on the Exhibit button. Which of the following connectors is image D?

- A. 80 Pin SCSI Connector
- B. 68 Pin SCSI Connector, High Density
- C. 50 Pin SCSI Connector, High Density
- D. 50 Pin SCSI Connector, Low Density

Correct Answer: A

Section: (none)

QUESTION 80

A Windows file server has run out of space. In the interim the administrator is moving several archived confidential folders that have been encrypted off the file server and onto an older server file shares. After the move, a manager reports that they are able to access and modify some of the items that have been moved. Which of the following is the MOST likely issue?

- A. The temporary server was formatted as NTFS.
- B. The manager is a power user on the temporary server.
- C. The temporary server was formatted as FAT32.
- D. The manager is an administrator on the temporary server "Certification Depends on Only One Thing" - www.actualanswers.com 61 CompTIA SK0-003 Exam

QUESTION 311

An administrator has just upgraded a server from non-hot plug storage to all hot plug storage. The administrator powers up the server, during POST the RAID controller is recognized but none of the drive lights flash. Which of the following should the administrator do FIRST to troubleshoot the problem?

- A. Check the backplane cabling.
- B. Check the server BIOS.
- C. Update the RAID controller firmware.
- D. Install the latest hard drive firmware

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 312

An administrator has just installed a new NIC into the server. The system POSTs fine and the NIC is recognized by the OS, but it does not receive an IP address. Which of the following is the MOST likely cause of this?

- A. The NIC is not on the HCL.

- B. The driver is incorrect on the server.
- C. The patch cable has not been seated properly.
- D. The NIC is not seated properly.
