Number: SKO-003
Passing Score: 800
Time Limit: 120 min
File Version: 14.5

<http://www.gratisexam.com/>

Exam Code: SK0-003

Exam Name: CompTIA Server+ (2010 Edition)

Exam A

QUESTION 1

A technician would like to ensure that when users connect to a web server in a server farm, they connect to the server with the lowest CPU utilization. Which of the following technologies would accomplish this?

- A. Load balancing
- B. High availability
- C. Virtual machine
- D. Reverse proxy

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 2

Changing the boot order of devices can be configured from which of the following?

- A. DIP switches
- B. BIOS
- C. Chipset
- D. Control Panel

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 3

Which of the following is an advantage of using non-ECC memory over ECC memory?

- A. ECC is faster than non-ECC
- B. Non-ECC is faster than ECC
- C. Non-ECC is more expensive than ECC
- D. Non-ECC checks for memory errors

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 4

Before installing a new device, a technician checks to make sure the device is on the HCL. Which of the following is the advantage of having an HCL device?

- A. It is supported by other vendors
- B. Increases performance

- C. Decreases cost
- D. Meets vendor standards

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 5

When building a computer with a 32 bit processor, which of the following is the MAXIMUM amount of memory supported?

<http://www.gratisexam.com/>

- A. 1GB
- B. 2GB
- C. 4GB
- D. 8GB

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 6

A technician has installed an additional NIC on a server. Which of the following can now be setup?

- A. Teaming
- B. VLANs
- C. Port forwarding
- D. Full duplex

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 7

A technician is setting up a network and wants to automatically assign IP addresses. Which of the following will need to be configured to automatically assign IP addresses?

- A. WINS
- B. DNS

- C. DHCP
- D. NTP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 8

A technician is building a Windows 2008 server and has installed a motherboard, processor, and power supply. Which of the following optical drives should the technician install?

- A. Flash Drive
- B. DVD-RW
- C. CD-ROM
- D. SSD

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 9

Typically, warranty information can be found on a vendor's website by looking up which of the following?

- A. Original hardware configuration
- B. Service manual
- C. Service tag
- D. Model number

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 10

When purchasing a UPS for a server room, which of the following are important factors to consider? (Select TWO).

- A. Network card configuration
- B. Remote access procedures
- C. Estimated runtime
- D. Maximum load
- E. Power cord length

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 11

A new server must be configured to provide fault tolerant connectivity to the DMZ and the backend database. Which of the following is the MOST cost effective way to accomplish this?

- A. A total of six NICs: two pairs of teamed NICs for the DMZ and two NICs for the backend database.
- B. One NIC can be configured with VLANs for the DMZ and backend database.
- C. A total of eight NICs to be teamed with the appropriate VLANs configured for the DMZ and backend database.
- D. A total of four NICs: two NICs for the DMZ and two NICs for the backend database.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 12

Which of the following is TRUE about a caching name server? (Select TWO).

- A. They must have a trusted SSL certificate
- B. They can be authoritative
- C. They cannot be load-balanced
- D. They can be recursive
- E. They require DHCP

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 13

A technician needs to deploy a new Internet facing web server and internal database server. The web server will use the database backend to retrieve shopping cart information. Which of the following configuration utilizes the LEAST resources?

- A. Both servers will be virtualized on the same host server. The web server will be configured with an Internet facing NIC connected to the host's hardware NIC and a backend NIC connected to a virtual switch. The database server NIC will be connected to the same virtual switch.
- B. The database server will be created on the existing virtual farm and configured with one physical NIC. The web server will be installed on new hardware and will utilize two physical NICs to separate backend traffic from frontend Internet communication.
- C. The web server will be created on the existing virtual farm and configured with two physical NICs, one NIC for backend and one for backend communication. The database server will be installed on new hardware to ensure maximum performance.
- D. Both servers will be virtualized on a pair of redundant host servers. Both the web server and the database server will share the same hardware resources. The web server will be configured with one NIC for both frontend and backend communication and the databases server will also have one NIC.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 14

A technician has fixed a reported issue with a heavily used software program and users have verified that the program is working correctly. Which of the following should the technician do NEXT?

- A. Document the process and update the baseline.
- B. Test the theory of probable cause and verify with the software vendor.
- C. Establish a plan of action to be included in the business impact analysis.
- D. Implement the software manufacturer workaround.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 15

After installing a new hard drive into a server for the purpose of mirroring the data from the first drive to the second one, the server displays an "operating system not found" error. Which of the following should the technician do to boot the server from the original drive?

- A. Replace the second drive with a hot swappable one.
- B. Swap the drive boot order in the BIOS.
- C. Make the second disk active under the disk management tool.
- D. Rebuild the array using the hardware RAID tool at boot.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 16

Which of the following MUST be done when imaging a Windows Server that will be used as a template?

- A. Remove software
- B. Run Windows Updates
- C. Update drivers
- D. Sysprep

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 17

A technician works for a company that has recently been affected by a virus. The virus entered the network by using port 6000. Port 6000 is used by an application located on a server. The technician has been asked to block this port on all servers and computers except for the one server which uses this port. Which of the following should the technician do?

- A. Update the antivirus application
- B. Install critical update security patches
- C. Adjust the software firewall settings
- D. Replace the current antivirus program

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 18

A technician manages a server that contains sensitive data. The server currently has two hard drives, one hosting the operating system and other generic files and the second hosting sensitive data. The technician needs to implement a technology that would guard against data loss for only the sensitive data, while adding only one additional hard drive. Which of the following should the technician implement to avoid reformatting any drives?

- A. RAID 0
- B. RAID 1
- C. RAID 3
- D. RAID 5

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 19

When planning for redundant power sources in a server deployment, which of the following should be purchased? (Select TWO).

- A. RAID controllers
- B. Multiple UPSs
- C. Redundant cooling
- D. Dual NICs
- E. Redundant power supplies

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 20

Which of the following is an advantage of RAID 0?

- A. Mirrors data
- B. Redundancy
- C. Speed
- D. Automatic hot spare

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 21

A technician is installing a server with sixteen 1 TB drives. They want the benefit of both speed and redundancy. Which of the following RAID configurations should be used?

- A. RAID 0
- B. RAID 1
- C. RAID 3
- D. RAID 50

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 22

Which of the following types of UPS would be used with equipment that is very sensitive to power fluctuations?

- A. Offline / Standby
- B. Line interactive
- C. Rackmount
- D. Online / Double Conversion

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 23

When a technician left the server room Monday evening everything was operational. When the technician returned Tuesday morning, the front bezel was off of the mail server, and it had been powered off. Which of the following should be checked FIRST

- A. TCP/IP settings
- B. RAID configuration

- C. Whether the power cord is attached
- D. Server room access log

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 24

Which of the following server roles allows a server to translate fully qualified domain names into IP addresses?

- A. Directory services server
- B. NTP server
- C. DHCP server
- D. DNS server

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 25

A technician has just finished installing a new server into a server rack. Which of the following should the technician do NEXT to complete the installation documentation?

- A. Update drivers, update operating system (e.g. Windows Update), create server baseline, create a new network diagram, update change management procedures
- B. Create server baseline, label server, store vendor-specific documentation, update network diagrams, update asset tracking information
- C. Create server baseline, assign server roles, install tape drive, delete network diagram, label server, update operating system (e.g. Windows Update)
- D. Install applications on server, install external drives, toss vendor-specific documentation, update network diagrams

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 26

A small business has had unauthorized people enter their server room and damage their servers. Which of the following locks for the door would BEST prevent unauthorized people from accessing the server room?

- A. Biometric
- B. Keypad
- C. Barcode
- D. Key lock

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 27

A technician is troubleshooting a lack of Internet connectivity affecting their entire office. The technician suspects the issue is with their Internet Service Provider failing to provide service. Which of the following command line tools should the technician use to BEST test this theory?

- A. tracert
- B. ipconfig
- C. netstat
- D. nslookup

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 28

An administrator needs to install a 2U server into a rack. Which of the following shows how much space, in height, needs to be available for the server to fit in the rack?

- A. 1.75 inches (4.45 cm)
- B. 2.5 inches (6.35 cm)
- C. 3.5 inches (8.89 cm)
- D. 4.25 inches (10.8 cm)

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 29

A customer has purchased a triple channel memory kit containing three DDR3 RAM modules. The server the RAM is intended for only has a dual channel capable motherboard. Which of the following is the BEST action to perform?

- A. Install only two modules as the RAM has to be installed in pairs
- B. Purchase one additional RAM module to make it even. Three modules will function as triple channel and the additional module will be for parity
- C. Purchase dual channel memory. The triple channel memory may be incompatible with the server motherboard
- D. Install the RAM. Two modules will perform as dual channel and one as single channel

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 30

Which of the following processor technologies is typically supported on current enterprise class UNIX servers but not enterprise class Windows Servers?

- A. RISC
- B. CISC
- C. Multi-threading
- D. 64-bit

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 31

An administrator needs to connect servers to the Fiber Channel SAN. Which of the following should the administrator install in the servers to allow this connection?

- A. Riser
- B. HBA
- C. SCSI card
- D. SAS card

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 32

An administrator creates a new directory then shares it on the Windows server. The administrator sets the permissions for everyone to "Modify" but users report they are unable to create or delete documents. Which of the following is the cause?

- A. The administrator forgot to change the share permissions
- B. The users were not part of the "Everyone" built in group
- C. The administrator shared the files but not the folder
- D. "Modify" only allows users to change existing documents

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 33

An administrator needs a network that can support up to 800 hosts on the same subnet. Which of the following is the MINIMUM subnet mask that should be used?

- A. 255.0.0.0
- B. 255.255.0.0
- C. 255.255.252.0
- D. 255.255.255.0

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 34

In a system with high CPU utilization, which of the following will help the MOST to minimize the performance impact of parity overhead in RAID 5?

- A. Use all SAS Drives
- B. Triple Channel RAM
- C. Use all Solid State Drives
- D. Hardware RAID Controller

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 35

An administrator has removed a SATA hard drive from a failed server. Which of the following adapters would MOST likely be used by the administrator to transfer files from the drive to a laptop?

- A. SATA to SCSI
- B. SATA to HBA
- C. SATA to USB
- D. SATA to SAS

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 36

Which of the following can transmit block level storage over Ethernet?

- A. SAS
- B. iSCSI
- C. USB
- D. SATA

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 37

Which of the following uses a switching fabric to connect storage LUNs to hosts?

- A. Fiber Channel
- B. SCSI
- C. SATA
- D. Ethernet

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 38

An administrator has experienced minor electrical shocks when touching metal surfaces in the datacenter. Which of the following is the MOST likely cause?

- A. The UPS is using 220-240V rather than 110-120V
- B. The humidity is too low
- C. The temperature is too low
- D. The datacenter is experiencing EMI

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 39

An administrator has encountered an error while patching a virtualized guest machine. Which of the following technologies would allow the administrator to restore to a pre-patched state the FASTEST?

- A. Cloning
- B. Bare Metal Restore
- C. OS Restore
- D. Snapshot

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 40

A datacenter manager would like to ensure that all fire suppression in the datacenter is safe for the equipment in the room. Which of the following classifications should be listed on the fire

suppression system?

- A. A
- B. B
- C. C
- D. D

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 41

A server administrator implements a solution that should fix an issue. Which of the following should the administrator do NEXT in the troubleshooting process?

- A. Notify users impacted by the problem
- B. Verify full system functionality
- C. Document the actions and outcomes
- D. Identify the scope of the problem

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 42

An administrator is troubleshooting a power supply that is believed to have failed. Which of the following tools will BEST help test the power supply?

- A. ESD Equipment
- B. Multimeter
- C. POST Card
- D. Toner Probe

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 43

An administrator is testing setting the IP address on a Linux server from command line. Which of the following commands is used to set the default gateway for the server?

- A. route
- B. traceroute
- C. ipconfig
- D. nmap

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 44

An administrator has replaced a faulty drive in a server using software RAID. The drive needs to now be partitioned before being added back to the array. Which of the following tools should the administrator use to accomplish this?

- A. chkdsk
- B. mount
- C. fsck
- D. diskpart

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 45

Which of the following server types allows resolution of domain names to IP addresses?

- A. DHCP server
- B. DNS server
- C. Web server
- D. VLAN server

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 46

Which of the following backup media would be MOST appropriate for router configuration files?

- A. Optical
- B. Tape
- C. Flash drive
- D. Hard disk

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 47

A user reports that they are unable to print to a remote printer. Which of the following should the

technician check FIRST?

- A. Printer driver
- B. Protocol stack
- C. Network connectivity
- D. Correct patch application

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 48

A user reports that they are unable to reach a particular website. The user had no issues reaching the site earlier in the day. Which of the following is the MOST likely cause of the lack of access?

- A. The VLAN is misconfigured
- B. The user has an improperly configured NIC
- C. The DHCP server is down
- D. The DNS server is down

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 49

Which of the following should be done FIRST before installing NOS patches in a production environment?

- A. Install patches on non critical servers
- B. Install patches in test environment
- C. Install patches on a PC
- D. Install patches on critical servers

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 50

A hypervisor is used to do which of the following?

- A. Create server baselines
- B. Manage virtual machines
- C. Monitor network traffic
- D. Manage disk space

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 51

A technician needs to build a server with at least 16GB of RAM and Windows 2008R2 as the operating system. Which of the following processors should the technician choose?

- A. 32-bit AMD processor
- B. 32-bit Intel P4 processor
- C. 64-bit Intel processor
- D. 64-bit ARM processor

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 52

A technician supports users in a client/server environment. A user suddenly cannot access any network resources. The user tried to logon to a known working computer but was unsuccessful. Which of the following should the technician check FIRST?

- A. Check if the user account is locked
- B. Check group policy
- C. Check the drive for fragmentation
- D. Check NTFS permissions

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 53

A company wants to expand their storage capacity in a flexible manner over their existing network. Which of the following storage solutions would they consider?

- A. External RAID array on an existing server
- B. Network Attached Storage
- C. Storage Area Network
- D. Tape library

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 54

A systems administrator has a high performance server with a file share full of data that has not been used in a long time, but is still important and might be used in the future. Which of the following should they do to reclaim the space off the high performance server?

- A. Audit the data
- B. Delete the data
- C. Back up the data
- D. Archive the data

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 55

A technician has been given a task to create a separate location for disaster recovery. The company has very high uptime requirements and will lose money if there is any downtime. Which

of the following deployments should the technician consider?

- A. Hot site
- B. Warm site
- C. Fault tolerant site
- D. Cold site

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 56

Which of the following are attributes of a hardware-based RAID controller? (Select THREE).

- A. Backs up data
- B. Less expensive than software RAID
- C. Vendor neutral implementation
- D. Accessible through a BIOS interface
- E. More host CPU usage than software RAID
- F. Accessible through a system utility after the OS has been loaded
- G. May retain data in the event of a power outage

Correct Answer: DFG

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 57

Which of the following can help prevent data loss on a RAID array in the event of a power failure?

- A. Using a RAID mirror
- B. A battery backed write cache
- C. Using RAID with parity
- D. A battery backed read cache

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 58

Which of the following are storage technologies that can be hot swappable? (Select TWO).

- A. SCSI
- B. SAS
- C. ATA
- D. IDE
- E. CMOS

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 59

Which of the following virtualization technologies can save time during provisioning?

- A. Cloning
- B. Snapshots
- C. Clustering
- D. Virtual memory

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 60

A Windows server's backup jobs keep failing with an error message stating that the source drive is not available. After reviewing the logs, which of the following should a technician do FIRST to troubleshoot this issue?

- A. Verify the backup media has enough storage space for the backup job
- B. Verify the volume shadow copy service is running
- C. Close all terminal services sessions on the server
- D. Reboot the Windows server and re-run the backup job

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 61

A technician notices the storage space available on a data server is rapidly decreasing. A few users seem to be storing considerably more data than the other users. Which of the following should the technician implement to give all users the same amount of available storage space?

- A. Disk quotas
- B. Group memberships
- C. Logon scripts
- D. Shadow volumes

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 62

A user is receiving an error about not having enough virtual memory. A technician wants to manually set the amount of available virtual memory for the computer. At a MINIMUM, the technician should set the virtual memory to be which of the following?

- A. 0.5 times the amount of physical memory
- B. 1.5 times the amount of physical memory
- C. 2 times the amount of physical memory
- D. Equal to the amount of physical memory

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 63

A technician with a Windows server would like to use Windows Software Update Services (WSUS) to deploy patches. Which of the following **MUST** the technician assign to the server to install WSUS?

- A. DHCP
- B. IMAP
- C. DNS
- D. IIS

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 64

A company backs up their data using daily, weekly, and monthly tape backups. The weekly backups are also known as which of the following?

- A. Son
- B. Father
- C. Grandfather
- D. Great-grandfather

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 65

A technician at a small business goes into the server room to perform maintenance on a server and notices it is very hot and audible alarms are going off. The technician is unsure of how to remedy the situation. Which of the following should the technician do?

- A. Turn off all the equipment in the server closet
- B. Install a fan in the server closet
- C. Turn off the power to the server closet
- D. Follow escalation procedures for emergencies

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 66

Which of the following should a technician use to remove dust from the inside of a server case?

- A. Compressed air
- B. Vacuum
- C. Soap and water
- D. Disinfecting wipes

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 67

The warranty expiration date of each server should be recorded in which of the following documents?

- A. Asset management
- B. Network diagram

- C. Server baseline
- D. List of vendors

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 68

Which of the following connectors identifies that a motherboard has onboard video capabilities?
(Select TWO).

- A. DB-15
- B. DB-9
- C. DB-25
- D. RJ-45
- E. DVI

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 69

Which of the following accurately describes the meaning of redundant cooling?

- A. The source of cooling to a RAID system
- B. The cooling system in a redundant power supply
- C. A cooling system that can be installed in case of failure
- D. A second cooling system in case of a failure

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 70

A technician has to populate a server motherboard with memory. The board has a memory bus speed of 800 MHz. Which of the following memory types should be used?

- A. DDR3
- B. SDRAM
- C. DDR
- D. DDR2

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 71

A server in a manufacturing environment needs to receive input from multiple measurement devices on the production line. Which of the following would be needed on the server?

- A. HBA card
- B. SCSI card
- C. Serial card
- D. Video card

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 72

A server technician has been attempting to install an operating system on the company test server for several days. The technician has experienced error messages at several points of the installation and the system has frozen during various parts of the boot process. The technician has replaced the power supply, graphics card and installation disk with known good components. Which of the following could be causing these issues? (Select TWO).

- A. Storage driver not loaded
- B. Fragmented hard drive
- C. Damaged or faulty NIC chipset
- D. Damaged or faulty system board
- E. Memory incompatible with the processor
- F. Missing voltage regulator

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 73

A Windows user is trying to get to a shared folder on a server but is receiving an error message that multiple connections to the same resource are not allowed. Which of the following tools can the technician use from the user's workstation to get the user reconnected as quickly as possible?

- A. nbtstat with the /reload parameter
- B. nbtstat with the /resolved parameter
- C. net use with the /delete parameter
- D. net use with the /persistent parameter

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 74

Which of the following BEST describes a Blade server?

- A. Provides higher levels of physical redundancy than a typical server
- B. Provides better rack space utilization than a typical server
- C. Is 1.75 inches in height to fit properly in a rack
- D. Uses an unshared backplane

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 75

An administrator is working on a rack mount server with all newly installed equipment. The uninterruptible power supply (UPS) in the rack starts beeping loudly. Which of the following is the FIRST troubleshooting step that should be taken?

- A. Ensure that the power cable for the UPS is plugged in.
- B. Ensure the battery in the UPS is still good.
- C. Check the smart cable connecting the UPS to the server.
- D. Reset the UPS to determine if the problem persists.

Correct Answer: A

Section: (none)

Explanation

Explanation:

QUESTION 77

An administrator needs to explain to management why updates are needed for the server. Which of the following is the BEST explanation to give?

- A. The updates guarantee that the server will work smoothly.
- B. The updates show management that IT is working diligently.

- C. The updates address driver and security issues.
- D. The updates are needed to allow the system monitoring agents to connect to the system.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 78

An administrator has just installed a new NIC into the server. The system POSTs fine and the NIC is recognized by the OS, but it does not receive an IP address. Which of the following is the MOST likely cause of this?

- A. The NIC is not on the HCL.
- B. The driver is incorrect on the server.
- C. The patch cable has not been seated properly.
- D. The NIC is not seated properly.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 79

A file server is setup in a RAID 5 configuration. Recently there was a power failure in the server room while a user was transferring a document from one drive on the server to another drive on the same server. Unfortunately their UPS was in repair during this outage, and the file is now corrupt. Which of the following can be done to prevent this situation in the future?

- A. Increase the memory on the server.
- B. Reconfigure drives to a RAID 0+1.
- C. Install a battery backed write cache module in the system.
- D. Instruct the user to save to the local system instead of to the server.

Correct Answer: C

Explanation

Explanation/Reference:

Explanation:

QUESTION 80

An administrator has a single 14U rack. The administrator needs to install fifteen servers; rack-mounted redundant uninterruptible power supplies (UPSs), a network switch, and a KVM. Which of the following server types would be BEST suited for this scenario?

- A. Blade servers
- B. Rackmount servers
- C. Tower servers
- D. Web servers

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 81

A company has a policy that states that all servers will be fully backed up on the weekend. Additionally, all changed items will be backed up each night. In the event of a server failure, the administrator wants to be able to fully recover the system using two restore jobs. Which of the following backup levels should be used nightly?

- A. Incremental
- B. Normal
- C. Differential
- D. Full

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 82

An administrator is getting reports that a file server is responding slowly. Which of the following steps should the administrator take FIRST?

- A. Remove unnecessary files on the server to free up hard disk space.
- B. Defragment the server's hard disks.
- C. Compare monitoring results with the server baseline.
- D. Add additional memory to reduce paging.

Correct Answer: C

Section: (none)

QUESTION 90

An administrator is configuring RAID 1 in a server. The administrator has been given two matching 80GB SATA-2 hard drives, two SATA-2 cables, and a SATA-2 RAID adapter. How should the administrator BEST configure these drives?

- A. Install one drive on the first channel and install the second drive on the second channel.
- B. Install one drive on the first cable, on the first channel. Install the second drive on the second cable, on the second channel.
- C. Install both drives on the same channel. Cable both drives as the primary master on the same

cable.

- D. Install both drives on the same channel. On the same cable one drive should be set as primary slave and the other drive as the primary master.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 91

Recently traffic to the company web server has more than doubled, resulting in slower response times from the server. An administrator has decided to add a second, identical 10/100/1000 NIC to the server. The server is presently connected to a 10/100/1000 switch, with four open ports on the switch. Which of the following is the BEST solution to speed up web traffic?

- A. Free up more ports on the switch
- B. Enable server load balancing
- C. Move the second network adapter to a new subnet
- D. Enable network adapter teaming

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 92

An administrator gets a call that multiple users do not have network access to the company server that they have been using for five years. Users can access the other servers and computers in the building and check their home email accounts. The administrator tests the server's Ethernet cable, verifies it works, and plugs it back into the NIC only to receive no status lights. Which of the following BEST indicates the problem?

- A. The DNS server is down.
- B. The NIC driver on the server is malfunctioning.
- C. The DHCP server is down.
- D. The server's NIC is malfunctioning.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 93

A web server has to be available all the time. It has its own redundant power source and uninterruptible power supply (UPS). Which of the following actions will provide additional fault tolerance?

- A. Add a second DVD drive
- B. Add an extended runtime module (ERM) to the UPS

- C. Configure automated system recovery (ASR)
- D. Add a second NIC

Correct Answer: D

QUESTION 151

Which of the following is the MOST important data retention consideration when creating a backup system?

- A. Utilizing disk-to-disk clustering and hot site replication
- B. If the GFS backup system will cover all potential data breaches
- C. The process to move the data backup to an offsite location
- D. The individual laws and legal requirements of the data

Correct Answer: D

QUESTION 153

Which of the following is the MOST important consideration when purchasing a new server for a mission critical application?

- A. RAID 0 compliant
- B. Notifying all stakeholders of the server upgrade
- C. Service Level Agreement
- D. KVM access

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 154

Which of the following is an advantage of hardware RAID over software RAID?

- A. Hardware RAID costs less than software RAID.
- B. Hardware RAID is built into the operating system's software.
- C. Hardware RAID has better performance than software RAID.
- D. Hardware RAID requires no configuration and software RAID does.

Correct Answer: C

Explanation/Reference:

Explanation:

QUESTION 155

After a server has been installed into a rack, an administrator must ensure which of the following?

- A. Warm air flow is permitted through the front bezel
- B. The system is labeled so that it can be identified
- C. Verify the change control process can be implemented
- D. Determine the correct power requirements

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 156

A server is overheating. Which of the following is the MOST likely cause?

- A. The RAM used was an incorrect brand.
- B. The boot sequence was set improperly.
- C. Dust has gathered up inside the server.
- D. The server is being overclocked.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 157

During a routine maintenance visit to a client, an administrator noticed that the last full backup did not complete. Which of the following should the administrator do FIRST?

- A. Schedule and perform an incremental backup as soon as possible.
- B. Inspect backup report logs.
- C. Schedule and perform a full backup as soon as possible.
- D. Inspect alert notification settings.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 158

An administrator is adding memory to a server. Once the system boots up, the same amount of memory appears as before the upgrade. Which of the following is the MOST likely cause?

- A. The memory is not the correct CAS latency.
- B. The memory is not installed in the correct slot.
- C. The memory does not have the correct timing.
- D. The memory is not the correct speed.

Correct Answer: B

Explanation/Reference:

Explanation:

QUESTION 161

An administrator has just finished physically replacing the system board in a Windows domain controller. Which of the following must be done before booting the server back into Windows?

- A. Update the time and date in the BIOS.
- B. Update the firmware on the SCSI controller.
- C. Update the firmware to the latest version.
- D. Configure IPMI on the new board.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 162

A server was recently updated with the latest antivirus definitions. Immediately after the update, the server begins to report 'file not found' errors for a mission critical application. Which of the following is the MOST likely reason for this?

- A. The update was done incorrectly and now the server needs to be restarted.
- B. The update has discovered viruses on the server and removed those virus files.
- C. The update requires a reboot for the files to process correctly.
- D. The update has quarantined files that are false positives.

Explanation

Explanation/Reference:

Explanation:

QUESTION 228

Which of the following protocols would be used to test if one host is reachable by another host, by sending echo requests and waiting for echo replies?

- A. SNMP
- B. ICMP
- C. TCP
- D. UDP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 229

A workstation is added to a newly created subnet using 192.168.100.0/24. A DHCP server is available on subnet 192.168.101.0/24. The user is unable to lease an address from the DHCP server. Which of the following would BEST resolve the problem?

- A. Assign the workstation a static IP address.
- B. Add a second DHCP server to the 192.168.101.0/24 subnet.
- C. Add a DHCP relay to the 192.168.100.0/24 subnet.
- D. Add a DHCP server to the 192.168.100.0/24 subnet.

Correct Answer: C

QUESTION 240

Which of the following allows users to recover their deleted files on file shares by themselves?

- A. Windows restore
- B. Windows backup
- C. Shadow copies
- D. Shadow backup

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 241

An administrator installed new components on a server. After the device installation, two of the components fail. Which of the following is the cause of the problem?

- A. The server was not powered off correctly.
- B. The proper ESD procedures were not used.
- C. The devices were installed in the incorrect sequence.
- D. The devices are incompatible with the system.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 242

An administrator installs a new server with five 146GB drives and implements RAID 5 for hardware redundancy. How much disk space will be available for the OS, tools and regular files?

- A. 146GB
- B. 438GB
- C. 584GB
- D. 730GB

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 243

Which of the following statements is true about L3 cache?

- A. L3 cache operates faster than the system processor.
- B. L3 cache runs at the speed of the processor.
- C. L3 cache can deliver data in as little as 15ns.
- D. L3 cache runs at the speed of the system bus.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 247

Which of the following features should a technician consider when purchasing a KVM switch for a datacenter?

- A. PCI slots available
- B. Scalability and flexibility
- C. Number of analog modems provided
- D. Number of video conference devices connected

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 248

While reviewing the backup logs a server administrator notices that a backup job for an application server on the same subnet has failed. Which of the following is MOST likely the problem?

- A. The remote agent was not running.
- B. The management card has failed.
- C. The proxy server was blocking access.
- D. The hardware firewall was blocking access.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 249

Which of the following is an advantage of using a KVM with multiple servers?

- A. Eliminates the need for backup tapes
- B. Increases redundancy
- C. Saves physical space in the racks
- D. Offers additional runtime for the UPS

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 250

An administrator sees that smoke is coming from the UPS. Which of the following should they do FIRST?

- A. Use a Class A fire extinguisher.
- B. Evacuate personnel.
- C. Install additional fans in the UPS.
- D. Backup the servers.

Correct Answer: B

QUESTION 251

Which of the following is MOST likely the reason a technician would implement software RAID for a SOHO environment?

- A. CPU efficiency
- B. High availability
- C. High redundancy
- D. Cost effective

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 252

A technician is unable to eject a tape from a drive when pressing the eject button. Which of the following is MOST likely the cause?

- A. Corrupt OS
- B. Array is rebuilding
- C. Driver problem
- D. Drive failure

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 253

A system administrator is trying to troubleshoot company wide email problems that may be related to DNS. Which of the following network tools would be MOST useful to determine if it is a DNS issue?

- A. netstat
- B. tracert
- C. nslookup
- D. ping

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 254

Several remote sales employees, who have come into the office this week, report that they are unable to get on the Internet, but no other users have reported similar issues. The helpdesk has escalated the issue and the case notes state that the users have IP addresses that begin with 169. Which of the following should the system administrator check FIRST?

- A. DHCP server
- B. Network switches
- C. DNS server
- D. Core router

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 255

A system administrator needs to specify a set of FQDN to IP address mappings for a legacy server; the administrator does not want the legacy server to be referenced by other servers. Which of the following should the administrator use to set this?

- A. DHCP server
- B. DNS server
- C. Host file
- D. Route statements

Correct Answer: C
