Microsoft 70-410 Questions & Answers

Installing and Configuring Windows Server 2012

Version: 50.3  
Microsoft 70-410 Exam

## Exam A

### QUESTION 1

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

ABC.com has a server, named ABC-SR07, which has the ADDS, DHCP, and DNS server roles installed. ABC.com also has a server, named ABC-SR08, which has the DHCP, and Remote Access server roles installed. You have configured a server, which has the File and Storage Services server role installed, to automatically acquire an IP address. The server is named ABC- SR09.

You then create reservation on ABC-SR07, and a filter on ABC-SR08.

Which of the following is a reason for this configuration?

- A. It allows ABC-SR09 to acquire a constant IP address from ABC-SR08 only.
- B. It configures ABC-SR09 with a static IP address.
- C. It allows ABC-SR09 to acquire a constant IP address from ABC-SR07 and ABC-SR08.
- D. It allows ABC-SR09 to acquire a constant IP address from ABC-SR07 only.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

### QUESTION 2

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed and all client computers have Windows 8 installed.

You install the DHCP server services on a server named ABC\_SR02 and configure a DHCP scope for the ABC.com network. You want ABC\_SR02 to automatically assign IP configurations to all client computers on the network.

How would you accomplish this task? (Choose all that apply)

- A. You should activate the DHCP scope on ABC\_SR02.
- B. You should authorize ABC\_SR02 in Active Directory.
- C. You should configure the client computers to Obtain an IP address automatically.
- D. You should configure the client computers to with an alternative IP address.

**Correct Answer:** BC

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

A DHCP server must be authorized before it can assign IP configurations to client computers. Client computers must be configured to receive IP addresses automatically. [http://technet.microsoft.com/en-us/library/ee941131\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/ee941131(v=ws.10).aspx) [http://technet.microsoft.com/en-us/library/gg722802\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/gg722802(v=ws.10).aspx)

### QUESTION 3

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

ABC.com has a server, named ABC-SR13, which is configured as the primary DNS server in the ABC.com domain. ABC.com has another server, named ABC-SR14, which makes use of ABC- SR13 for DNS queries.

You want to make sure that running nslookup.exe from ABC-SR14 produces a result that shows the proper

name of the default server.

Which of the following actions should you take?

- A. You should consider creating a reverse lookup zone on ABC-SR14.
- B. You should consider creating a forward lookup zone on ABC-SR14.
- C. You should consider creating a reverse lookup zone on ABC-SR13.
- D. You should consider creating a forward lookup zone on ABC-SR13.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 4

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

ABC.com has a domain controller, named ABC-DC01, which contains the ABC.com domain's primary DNS zone. ABC.com's workstations refer to ABC-DC01 as their primary DNS server.

You have been instructed to make sure that any DNS requests that are not for the ABC.com domain, is resolved by ABC-DC01 querying the DNS server of ABC.com's Internet Service Provider (ISP).

Which of the following actions should you take?

<http://www.gratisexam.com/>

- A. You should consider configuring a reverse lookup zone.
- B. You should consider configuring forward lookup zone.
- C. You should consider configuring Forwarders.
- D. You should consider configuring 019 IP Layer Forwarding.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 5

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing Group Policy preference.

Which of the following is TRUE with regards to Group Policy preference?

- A. It supports applications and operating system features that are not compatible with Group Policy
- B. It does not support item-level targeting.
- C. It is the same as Group Policy filtering.

- D. It does not cause the application or operating system feature to disable the user interface for the settings they configure.

**Correct Answer:** AD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 6**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have been instructed to make sure that ABC.com users are not able to install a Windows Store application. You then create a rule for packaged apps.

Which of the following is the rule based on? (Choose all that apply.)

- A. The publisher of the package.
- B. The publisher of the application.
- C. The name of the package
- D. The name of the application
- E. The package version.
- F. The application version.

**Correct Answer:** ACE

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 7**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing connection security rules.

Which of the following is TRUE with regards to connection security rules? (Choose all that apply.)

- A. Connection security rules allows for traffic to be secured via IPsec.
- B. Connection security rules do not allow the traffic through the firewall.
- C. Connection security rules are applied to programs or services.
- D. Connection security rules are applied between two computers.

**Correct Answer:** ABD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 8**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

ABC.com's user accounts are located in an organizational unit (OU), named ABCStaff. ABC.com's

managers belong to a group, named ABCManagers.

You have been instructed to create a new Group Policy object (GPO) that should be linked to the ABCStaff OU, but not affect ABC.com's managers.

Which of the following actions should you take?

- A. You should consider removing the user accounts of the managers from the ABCStaff OU.
- B. You should consider configuring the new GPO's WMI filter.
- C. You should consider adding the user accounts of ABC.com's managers to the Admins group.
- D. You should consider adding the user accounts of ABC.com's managers to the localAdministrators group.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 9

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have been instructed to remove a domain controller named ABC\_DC05 from the domain. You ascertain that ABC\_DC05 does not have the DNS Server Role installed.

You want to determine which service location (SRV) records are registered in DNS for ABC\_DC05.

Which of the following actions should you take?

- A. You should run the dcdiag /v command on ABC\_DC05.
- B. You should run the netdiag /v command on ABC\_DC05.
- C. You should run the Install-ADDSDomainControllercmdlet with the -InstallDns parameter on ABC\_DC05.
- D. You should open the netlogon.dns file on ABC\_DC05.
- E. You should configure the Integration Services settings on ABC\_DC05.
- F. You should run the Dnscmd command on ABC\_DC05.
- G. You should run the Nslookup command on ABC\_DC05.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 10

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have been instructed to modify an Active Directory computer object.

Which of the following actions should you take?

- A. You should consider making use of the Get-ADComputer Windows PowerShell cmdlet.
- B. You should consider making use of the Set-ADComputer Windows PowerShell cmdlet
- C. You should consider making use of the New-ADComputer Windows PowerShell cmdlet
- D. You should consider making use of the Get-ADComputerServiceAccount Windows PowerShell cmdlet

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 11**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have been instructed to add a new domain controller to ABC.com's existing environment.

Which of the following actions should you take?

- A. You should consider making use of Server Manager.
- B. You should consider making use of Authorization Manager.
- C. You should consider making use of Remote Desktop Gateway Manager.
- D. You should consider making use of Network Load Balancing Manager.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 12**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have just executed the `Uninstall-WindowsFeature Server-Gui-Shell Remove` cmdlet on a ABC.com server, named ABC-SR13.

Which of the following is the reason for doing this?

- A. To only remove Windows Explorer from ABC-SR13.
- B. To only remove the Windows Internet Explorer from ABC-SR13.
- C. To only remove the components and files related to Windows Explorer from ABC-SR13.
- D. To remove Windows Explorer, Windows Internet Explorer, and all associated components and files from ABC-SR13.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 13**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing spanned volumes.

Which of the following is TRUE with regards to spanned volumes? (Choose all that apply.)

- A. Spanned volumes do not provide fault tolerance.

- B. Spanned volumes are a fault tolerant solution.
- C. You can extend a spanned volume onto a maximum of 16 dynamic disks.
- D. You cannot create a spanned volume using a system volume or boot volume.

**Correct Answer:** AD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 14**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing NIC Teaming.

Which of the following is TRUE with regards to NIC Teaming? (Choose all that apply.)

- A. It allows for traffic failover to prevent connectivity loss if a network component fails.
- B. It prevents bandwidth aggregation.
- C. The Windows Server 2012 R2 implementation of NIC Teaming supports a maximum of 5 NICs in a team.
- D. The Windows Server 2012 R2 implementation of NIC Teaming supports a maximum of 32 NICs in a team.

**Correct Answer:** AD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 15**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing Storage Spaces.

Which of the following is TRUE with regards to Storage Spaces?

- A. Mirroring and parity are optional resilient storage modes of Storage Spaces.
- B. Failover clustering is not supported by Storage Spaces.
- C. Storage spaces are virtual disks with associated attributes such as a preferred level of resiliency, and thin or fixed provisioning.
- D. Storage spaces are a collection of physical disks with associated attributes such as a preferred level of resiliency, and thin or fixed provisioning.

**Correct Answer:** AC

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 16**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

A server named, ABC-SR13, has a Server Core Installation of Windows Server 2012 R2 installed. You are instructed to convert ABC-SR13's installation to a Server with GUI installation.

You want to use a Windows PowerShell cmdlet that uses Windows Update as a source.

Which of the following actions should you take?

- A. You should consider making use of the Install-WindowsFeature Server-Gui-Mgmt-Infra,Server-Gui-Shell Restart cmdlet.
- B. You should consider making use of the Install- Install-WindowsFeature Server-Gui-Mgmt- Infra,Server-Gui-Shell Restart Source c:\mountdir\windows\winsxs cmdlet.
- C. You should consider making use of the Install- Uninstall-WindowsFeature Server-Gui-Shell Remove cmdlet.
- D. You should consider making use of the Set-ExecutionPolicy cmdlet.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 17

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

ABC.com has a server, named ABC-SR07, which has four network adapters. ABC.com has two local area networks (LANs). Two of ABC-SR07's network adapters are connected to the one LAN, while the other two are connected to the other LAN.

You are required to configure one of the network adapter pairs into a network adapter team.

Which of the following actions should you take?

- A. You should consider accessing the Group Policy Management Console (GPMC) on ABC-SR07.
- B. You should consider accessing the TS Manager console on ABC-SR07.
- C. You should consider accessing the Server Manager console on ABC-SR07.
- D. You should consider accessing the Remote Desktop Gateway Manager console on ABC-SR07.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 18

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

ABC.com has its headquarters in London, and several widespread satellite offices. When ABC.com releases a new written policy stating that the graphical user interface (GUI) should not be installed on any servers deployed to ABC.com's satellite offices.

It is reported that a server in one of the satellite offices are not compliant with the new written policy. You are required to remedy the situation, while using the least amount of user interaction.

<http://www.gratisexam.com/>

Which of the following actions should you take?

- A. You should consider uninstalling the User Interfaces and Infrastructure feature using a PowerShell cmdlet.
- B. You should consider uninstalling the User Interfaces and Infrastructure feature via TS Manager.
- C. You should consider uninstalling the User Interfaces and Infrastructure feature via Server Manager.
- D. You should consider uninstalling the User Interfaces and Infrastructure feature using the Dsrms.exe command from the command prompt.

**Correct Answer: C**

#### QUESTION 19

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2008 R2 installed.

Most of the ABC.com servers have 64 bit CPU's installed, while the rest have 32 bit CPU's installed. You are informed that ABC.com wants to deploy Windows Server 2012 R2 on all their servers.

You need to make recommendations to ensure that this is possible.

Which of the following would you recommend?

- A. You should inform ABC.com that the deployment can proceed without any changes.
- B. You should inform ABC.com that the servers with 32 bit CPU's must be upgraded to include 64 bit CPU's for the deployment to proceed.
- C. You should inform ABC.com that the servers with 64 bit CPU's must be upgraded to include 32 bit CPU's for the deployment to proceed.
- D. You should inform ABC.com that the deployment is not in any way possible.

**Correct Answer: B**

**Section: (none)**

#### QUESTION 20

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You have been instructed to make sure that a server, named ABC-SR07, is configured to be managed remotely from ABC-SR01 using Server Manager.

Which of the following is not a valid option to take? (Choose all that apply.)

- A. You could access the server manager on ABC-SR01.
- B. You could access the server manager on ABC-SR13.
- C. You could run the %windir%\system32\Configure-SMRemoting.exe from an elevated command prompt.

on ABC-SR13.

D. You could run the Configure-SMRemoting.exe enable cmdlet on ABC-SR01.

**Correct Answer:** AD

#### QUESTION 21

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain have Windows Server 2012 R2 installed.

You have logged on to a server, named ABC-SR07, and would like to obtain the IP configurations of a server, named ABC-SR13.

Which of the following actions should you take?

- A. You should consider making use of the Winrs.exe command.
- B. You should consider making use of the Winsat.exe command.
- C. You should consider making use of the Winpop.exe command.
- D. You should consider making use of the Dsrm.exe command.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 22

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

A domain controller named ABC\_DC04 has the DNS Server Role installed and hosts the standard primary DNS zone.

You want to prevent computers that are not members of the ABC.com domain from adding their DNS records to the ABC.com zone.

Which of the following actions should you take?

- A. You should change the ABC.com zone to an Active Directory-Integrated DNS zone.
- B. You should run the netdiag /v command on ABC\_DC04.
- C. You should enable Secure dynamic updates on ABC\_DC04.
- D. You should configure the Integration Services settings on ABC\_DC05.
- E. You should run the Dnscmd /config command on ABC\_DC05.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Reference:

[http://technet.microsoft.com/en-us/library/ee941211\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/ee941211(v=ws.10).aspx)

#### QUESTION 23

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named

ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You add the DHCP Server Role on a server named ABC\_SR04. You configure DHCP to support two subnets named Subnet A and Subnet B. Subnet A has a network ID of 172.16.0.0/16 and Subnet B has a network ID of 172.16.1.0/24.

All client computers are reconfigured to receive IP addresses from DHCP. However, clients on Subnet B cannot access clients on Subnet A.

What is the most likely cause of this problem?

- A. The Server Options are not configured correctly.
- B. The IP address for the Router is not correctly specified in the Scope Options.
- C. The IP address for the DNS Server is not correctly specified in the Scope Options.
- D. The IPv6 has not been disabled on ABC\_SR04.

**Correct Answer: B**

#### **QUESTION 24**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have installed the DNS Server Role on a ABC.com server, named ABC-SR13. ABC.com's workstations make use of a web proxy to access the Internet, and refer to ABC-SR13 as a primary DNS server.

You have been instructed to make sure that Internet host names for ABC.com's workstations are not resolved by ABC-SR13.

Which of the following actions should you take?

- A. You should consider configuring a primary zone on ABC-SR13.
- B. You should consider configuring a secondary zone on ABC-SR13.
- C. You should consider configuring a reverse lookup zone on ABC-SR13.
- D. You should consider configuring a forward lookup zone on ABC-SR13.

**Correct Answer: A**

**Section: (none)**

Explanation:

#### **QUESTION 25**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The network as a server named ABC\_SR05 that provides DHCP services. You need to create the DHCP scopes to support a subnet that has 800 hosts. You want to minimize the number of unused IP addresses on each subnet.

How would you configure DHCP to support these subnets?

- A. You should assign the network 172.16.0.0/16.

- B. You should assign the network 172.16.0.0/17.
- C. You should assign the network 172.16.0.0/18.
- D. You should assign the network 172.16.0.0/19.
- E. You should assign the network 172.16.0.0/20.
- F. You should assign the network 172.16.0.0/21.
- G. You should assign the network 172.16.0.0/22.
- H. You should assign the network 172.16.0.0/23.
- I. You should assign the network 172.16.0.0/24.

**Correct Answer:** G

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 26**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

ABC.com has a server, named ABC-SR07, which has the AD DS, DHCP, and DNS server roles installed. ABC.com also has a server, named ABC-SR08, which has the DHCP, and Remote Access server roles installed. You have configured a server, which has the File and Storage Services server role installed, to automatically acquire an IP address. The server is named ABC- SR09.

You then create a filter on ABC-SR07.

Which of the following is a reason for this configuration?

- A. To make sure that ABC-SR07 issues ABC-SR09 an IP address.
- B. To make sure that ABC-SR07 does not issue ABC-SR09 an IP address.
- C. To make sure that ABC-SR09 acquires a constant IP address from ABC-SR08 only.
- D. To make sure that ABC-SR09 is configured with a static IP address.

**Correct Answer:** B

**Section:** (none)

**Explanation**

Explanation:

#### **QUESTION 27**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain have Windows Server 2012 R2 installed, while domain controllers have Windows Server 2008 R2 installed.

You are then tasked with deploying a new Windows Server 2012 R2 domain controller. You are preparing to install the DNS Server role, and enable the global catalog server option.

Which of the following actions should you take?

- A. You should consider making use of Server Manager.
- B. You should consider making use of the Active Directory Installation Wizard.  
"Leading the way in IT Testing & Certification Tools" - [www.testking.com](http://www.testking.com) 26 Microsoft 70-410 Exam
- C. You should consider making use of the DHCP Installation Wizard
- D. You should consider making use of TS Manager

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 28**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com.

ABC.com has a Windows Server 2012 R2 domain controller, named ABC-DC01, which has the Domain Naming master and the Schema master roles installed. ABC.com also has a Windows Server 2008 R2 domain controller, named ABC-DC02, which has the PDC Emulator, RID master, and Infrastructure master roles installed.

You have deployed a new Windows Server 2012 R2 server, which belongs to a workgroup, in ABC.com's perimeter network. You then executed the djoin.exe command.

Which of the following is the purpose of the djoin.exe command?

- A. It sets up a computer account in a domain and requests an offline domain join when a computer restarts.
- B. It sets up a user account in a domain and requests an online domain join when a computer restarts.
- C. It sets up a computer account in a domain and requests an offline domain join immediately.
- D. It sets up a computer account in a domain and requests an online domain join immediately.

**Correct Answer: A**

**QUESTION 30**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing the Virtual Fibre Channel SAN feature.

Which of the following is TRUE with regards to the Virtual Fibre Channel SAN feature? (Choose all that

apply.)

- A. It prevents virtual machines from connecting directly to Fibre Channel storage.
- B. It allows for virtual machines to connect to Fibre Channel storage directly.
- C. It includes support for virtual SANs, live migration, and multipath I/O.
- D. It includes support for virtual SANs, and live migration, but not multipath I/O.

**Correct Answer:** BC

**Section:** (none)

**Explanation**

#### **QUESTION 31**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing what happens when you run the Remove-NetLbfoTeam Windows PowerShell cmdlet.

Which of the following describes the results of running this cmdlet?

- A. It removes one or more network adapters from a specified NIC team.
- B. It removes a team interface from a NIC team.
- C. It removes a specified NIC team from the host.
- D. It removes a network adapter member from a switch team.

**Correct Answer:** C

#### **QUESTION 32**

You work as a senior administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing the use of Non-Uniform Memory Architecture (NUMA).

Which of the following is TRUE with regards to Non-Uniform Memory Architecture (NUMA)? (Choose two.)

- A. It is a computer architecture used in multiprocessor systems.
- B. It is a computer architecture used in single processor systems.
- C. It allows a processor to access local memory faster than it can access remote memory.
- D. It allows a processor to access remote memory faster than it can access local memory.

**Correct Answer:** AC

**Section:** (none)

#### **QUESTION 33**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

ABC.com has a Hyper-V server, named ABC-SR13, which hosts multiple virtual machines.

You have enabled the use of Single-root I/O virtualization.

Which of the following is TRUE with regards to using Single-root I/O virtualization? (Choose all that apply.)

- A. It maximizes network throughput, while minimizing network latency.
- B. It maximizes network throughput, as well as network latency.
- C. It avoids the virtual switch stack and allows the virtual machine direct access to the actual network switch.
- D. It prevents the virtual machine from accessing the network switch directly.

**Correct Answer:** AC

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 34

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain, including domain controllers, have Windows Server 2012 R2 installed.

ABC.com has a domain controller, named ABC-DC01. You have been instructed to make sure that the Group Policy Administrative Templates are available centrally.

Which of the following actions should you take?

- A. You should consider copying the policies folder to the PolicyDefinitions folder in the ABC.com domain's SYSVOL folder.
- B. You should consider copying the PolicyDefinitions folder to the policies folder in the ABC.com domain's SYSVOL folder.
- C. You should consider copying the PolicyDefinitions folder to the policies folder in the ABC.com domain's systemroot folder.
- D. You should consider copying the PolicyDefinitions folder to the policies folder in the ABC.com domain's logonserver folder.

**Correct Answer:** B

### QUESTION 64

Which of the following options allows you to review the default root hints in on a DNS server that runs Windows 2012 Server?

- A. You should run the dcdiag /v command at an elevated command prompt.
- B. You should open the netlogon.dns file in Notepad.
- C. You should open the cache.dns file in NotePad.
- D. You should run the dnscmd command from the command prompt.

**Correct Answer: C**

### QUESTION 65

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The ABC.com network contains a network attached printer named HPNet01. You share HPNet01 from a server named ABC\_SR02 and publish the printer in Active Directory.

How would you ensure that members of a group named PrinterAdmin can manage HPNet01?

- A. You should enable Branch Office Direct Printing.
- B. You should configure the Printer defaults.
- C. You should share HPNet01 from a domain controller.
- D. You should configure the Security settings.

**Correct Answer: D**

### QUESTION 66

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The ABC.com network contains an iSCSI storage area network (SAN) as well as a server named ABC\_SR02 that runs the Hyper-V server role. ABC\_SR02 hosts several virtual machines.

You are required to create a LUN on the SAN that will only be used by a virtual machine named ABC\_VT01.

How would you ensure that the other virtual machines cannot use the LUN?

- A. You should create a Differencing Virtual Hard Disk on ABC\_VT01.
- B. You should configure Router Guard on ABC\_SR02.
- C. You should make use of the VHDX disk format on ABC\_VT01.
- D. You should create a pass-through disk on ABC\_VT01.

**Correct Answer:** D

#### **QUESTION 67**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed and all client computers have Windows 8 installed.

The ABC.com network has a single DNS server named ABC\_SR09. The client computers are located in an organizational unit (OU) named ABCPCs. You add a new Windows Server 2012 R2 computer named ABC\_SR10 to the network and configure the computer as an Intrasite Automatic Tunnel Addressing Protocol (ISATAP) router.

How would you enable the client computers to locate the ISATAP router through DNS? (Choose all that apply.)

- A. You should run the netsh interface ipv6 install command on the client computers.
- B. You should run the netsh interface ipv6 install command on ABC\_SR10.
- C. You should add the host (A) record isatap.ABC.com to the DNS zone.
- D. You should add an IPv6 host (AAA) record for ABC\_SR10 to the DNS zone.
- E. You should run the Set-DnsServerGlobalQueryBlockList cmdlet on ABC\_SR09.
- F. You should run the Set-NetIsatapConfiguration cmdlet on ABC\_SR10.

**Correct Answer:** CE

#### **QUESTION 68**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2.

The ABC.com network contains a server named ABC\_SR04 that has a Hyper-V Virtual Switch and several Hyper-V virtual machines. You upgrade the network interface cards (NICs) on ABC\_SR04 with NICs that have support for single-root I/O virtualization (SR-IOV).

How would you ensure that the virtual machines on ABC\_SR04 are able to use the SR-IOV NICs? (Choose all that apply.)

- A. You should run the New-NetSwitchTeam cmdlet on ABC\_SR04.
- B. You need to create an internal virtual network on ABC\_SR04.
- C. You need to install Integration Services on ABC\_04.
- D. You should configure the Hardware Acceleration settings on the virtual machines.
- E. You need to add a new Hyper-V Virtual Switch on ABC\_SR04.
- F. You need to remove the existing Hyper-V Virtual Switch from ABC\_SR04.
- G. You should run the Set-NetIsatapConfiguration cmdlet on ABC\_SR04.

**Correct Answer:** DEF

**QUESTION 69**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The ABC.com network contains a network attached printer named HPNet01. Only members of a group named ABCUsers and members of the Administrators group will be allowed to use HPNet01. You publish the HPNet01 in Active Directory and share it from a domain controller named ABC\_DC02. You then assign the deny Print permissions to HPNet01 for the Everyone group.

What else should you do to meet the requirements for HPNet01?

- A. You should disable Branch Office Direct Printing
- B. You should grant the Print permission to the ABCUsers group.
- C. You should configure the Printer defaults.
- D. You should grant the Print permission to the Administrators group.
- E. You should grant the Print permission to the ABCUsers group and the Administrators group.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation: The Server Operators group, the Administrators group, and the Print Operators group are all built-in and already have permissions to send print jobs.

**QUESTION 70**

You work as an administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers in the ABC.com domain have Windows Server 2012 R2 installed.

A ABC.com server named ABC\_SR12 hosts a Windows Server 2012 R2 virtual machine named ABC\_VT02. A ABC.com user named RoyMoses must be allowed to add and remove Windows features on ABC\_VT02.

Which of the following options will allow RoyMoses to complete his duties without giving him too much permissions?

- A. You should make RoyMoses a member of the Power Users group on ABC\_SR12.
- B. You should make RoyMoses a member of the Administrators group on ABC\_VT02.
- C. You should make RoyMoses a member of the Local Administrators group on ABC\_SR12.
- D. You should make RoyMoses a member of the Hyper-V Administrators group on ABC\_SR12.
- E. You should make RoyMoses a member of the Creator Owner group on ABC\_VT02.
- F. You should assign RoyMoses the Allow log on locally permission to ABC\_VT02.
- G. You should run the Delegation of Control Wizard on ABC\_VT02.

**Correct Answer:** B

#### **QUESTION 73**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The ABC.com network contains a server named ABC\_SR27 that runs the File Server server role. You create a new shared folder named ABCData on ABC\_SR27. ABCData will store files and folder for several ABC.com users.

How would you configure ABCData so users can only view the files and folders on ABCData that they have access to?

- A. You should disable Dynamic Access Control on ABC\_SR27.
- B. You should enable Access-based Enumeration on ABC\_SR27.
- C. You should enable File Access Auditing on ABC\_SR27.
- D. You should make use of Central access policies on ABC\_SR27.
- E. You should configure the NTFS permissions on ABC\_SR27.

**Correct Answer:** B

#### **QUESTION 74**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed.

The ABC.com network contains a DHCP server named ABC\_SR02 and a file server named ABC\_SR14. ABC\_SR14 has a reservation in DHCP.

You install a new network interface card (NIC) on ABC\_SR14.

How would you configure the DHCP reservation to ensure that ABC\_SR14 continues to use the same IP address?

- A. You should run the ipconfig command on ABC\_SR14.
- B. You should MAC address of the reservation.
- C. You should add an exclusion range for ABC\_SR14.
- D. You should configure the IP address of the reservation.
- E. You should configure the reservation to use BOOTP.

**Correct Answer: B**

#### **QUESTION 75**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed and all client computers have Windows 8 installed.

The client computers consist of both desktop computers and laptop computers. All client computers are located in an organizational unit (OU) named ABCComputers.

An administrator named Mia Hamm created a GPO named MSec and linked it to the ABCComputers OU. However, the settings in MSec must only be applied to laptop computers.

What should you do to have MSec applied appropriately, using the least amount of administrative effort?

- A. You should create an OU for the laptops and link the MSec to that OU.
- B. You should enable WMI filtering on MSec.
- C. You should configure the Apply Group Policy permissions for MSec.
- D. You should configure Group Policy Caching for MSec.

#### **QUESTION 76**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 R2 installed and all client computers have either Windows 7 or Windows 8 installed.

All client computers are located in an organizational unit (OU) named ABCComputers. You create a new GPO named Win8 and linked it to the ABCComputers OU. However, the settings in Win8 must only be applied to client computers that have Windows 8 installed.

What should you do to have Win8 applied appropriately, using the least amount of administrative effort?

- A. You should create an OU for the Windows 8 client computers and link the Win8 to that OU.
- B. You should configure WMI filtering for Win8.
- C. You should configure Security filtering for Win8.
- D. You should enable Group Policy Caching on the Windows 8 client computers.
- E. You should configure Audit filtering for Win8.

**QUESTION 78**

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All computers on the ABC.com network are configured to receive their IPv4 configuration from a DHCP server named ABC\_SR05.

The ABC.com network contains server named ABC\_SR17 has a Server Core Installation of Windows Server 2012 R2.

How would you configure ABC\_SR17 to have a static IP address?

- A. You should run the ipconfig command on ABC\_SR17.
- B. You should create a DHCP exclusion range for ABC\_SR17.
- C. You should run the netdiag command on ABC\_SR17.
- D. You should run the netcfg command on ABC\_SR17.
- E. You should run the netsh command on ABC\_SR17.
- F. You should run the wdsutil command on ABC\_SR17.
- G. You should run the wecutil command on ABC\_SR17.

You work as a network administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. All servers on the ABC.com network have Windows Server 2012 installed. The domain has a single domain controller named ABC\_DC01.

You have a Microsoft Excel spreadsheet that contains a list of new ABC.com employees for whom user accounts must be created.

Which of the following will allow you to create the new user accounts using the least administrative effort?

- A. You should use Active Directory Users and Computers on ABC\_DC01.
- B. You should run the adsiedit command from the command prompt on ABC\_DC01.

- C. You should run the csvde command from the command prompt on ABC\_DC01.
- D. You should run the ldifde command from the command prompt on ABC\_DC01.
- E. You should run the Import-Csv cmdlet in Windows PowerShell on ABC\_DC01.
