## **Exam A**

### **QUESTION 1**

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a solution that provides users with the ability to update their user attributes in Active Directory.

What should you recommend?

**Exhibit:**

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

### **Active Directory Configurations**

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

### **Business Requirements**

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

### **Technical Requirements**

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

### **Security Requirements**

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. a User Profile Service Application
- B. Active Directory Federation Services (AD FS)
- C. Business Connectivity Services
- D. Active Directory Rights Management Services (AD RMS)

**Correct Answer: A**

**Section: (none)**  
**Explanation**

**Explanation/Reference:**

**QUESTION 2**

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to identify the minimum number of content databases required for the planned SharePoint Server 2010 deployment.

How many content databases should you identify?

- A. 50
- B. 11
- C. 1
- D. 5

**Correct Answer: A**  
**Section: (none)**  
**Explanation**

**Explanation/Reference:**

**QUESTION 3**

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a search solution that meets the company's business requirements.

What should you include in the solution?

**Exhibit:**

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

### **Active Directory Configurations**

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

### **Business Requirements**

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

### **Technical Requirements**

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

### **Security Requirements**

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. authoritative pages
- B. search scopes
- C. federated locations
- D. host distribution rules

**Correct Answer: A**

**Section: (none)**  
**Explanation**

**Explanation/Reference:**

**QUESTION 4**

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a strategy to manage access to SharePoint content. You must achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

**Exhibit:**

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

### **Active Directory Configurations**

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

### **Business Requirements**

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

### **Technical Requirements**

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

### **Security Requirements**

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. Configure managed accounts.
- B. Implement Active Directory Lightweight Directory Services (AD LDS).
- C. Add Active Directory groups to the SharePoint groups.
- D. Create user policies and permission policies for the Web application.

**Correct Answer: C**

**Section: (none)**  
**Explanation**

**Explanation/Reference:**

**QUESTION 5**

You are a SharePoint administrator for Litware, Inc.

The company has a main office and a branch office. The company has 14,000 employees.

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

You need to design an authentication solution to provide users with access to the SharePoint sites from the Internet.

What should you include in the solution?

**Exhibit:**

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

### **Network Configurations**

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

### **Search Requirements**

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

### **Monitoring Requirements**

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

### **Compliance Requirements**

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

### **Security Requirements**

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. The Secure Store Service application
- B. Active Directory Rights Management Services (AD RMS)
- C. Active Directory Certificate Services (AD CS)
- D. The Access Services service application

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 6**

You are a SharePoint administrator for Litware, Inc.

The company has a main office and a branch office. The company has 14,000 employees.

<http://www.gratisexam.com/>

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

You need to recommend a data recovery strategy that meets the company's compliance requirements. The strategy must use the minimum amount of administrative effort.

What should you include in the strategy?

**Exhibit:**

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

### **Network Configurations**

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.

- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. SharePoint Health Analyzer
- B. Performance Point Services
- C. Performance Monitor
- D. Microsoft System Center Configuration Manager

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 11**

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various partner companies.

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to identify the minimum number of site collections required for the planned deployment of SharePoint Server 2010.

How many site collections should you identify?

**Exhibit:**

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

### **Line of Business Applications**

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

### **Intranet Requirements**

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

### **Extranet Requirements**

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

### **Public Site Requirements**

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. 3
- B. 10
- C. 13
- D. 1

**Correct Answer: B**

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

**Public Site Requirements**

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. an e-mail-enabled document library
- B. a Content Organizer rule
- C. a new service connection
- D. an information management policy

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 15**

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to recommend a solution to grant partner company employees access to the extranet.

What should you include in the solution?

**Exhibit:**

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

### **Line of Business Applications**

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

### **Intranet Requirements**

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

### **Extranet Requirements**

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

### **Public Site Requirements**

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Forms-based authentication and Active Directory Lightweight Directory Services (AD LDS)
- B. Forms-based authentication and the Application Layer Gateway Service (ALG)
- C. Integrated Windows authentication and Active Directory Rights Management Services (AD RMS)
- D. Integrated Windows authentication and Active Directory Federation Services (AD FS)

**Correct Answer: A**

**Section: (none)**

**QUESTION 17**

You are a SharePoint administrator for Blue Yonder Airlines.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend a solution for migrating all PerformancePoint 2007 objects to SharePoint Server 2010.

What should you include in the solution?

**Exhibit:**

**SharePoint Server 2007 Configurations**

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

**Technical Requirements**

For Upgrade Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

**Security Requirements**

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

**User Requirements**

Users must be able to access all documents during the upgrade process.

- A. the Import PerformancePoint Server 2007 Content wizard
- B. SharePoint Designer 2010
- C. The Import Application Definition File wizard
- D. PerformancePoint Dashboard Designer

**Correct Answer: A**

**Section: (none)**

## Explanation

#### QUESTION 18

You are a SharePoint administrator for Blue Yonder Airlines.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to increase the available disk space on Server1 and Server2 before you upgrade the farm.

What should you do?

#### Exhibit:

##### SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

##### Technical Requirements

For Upgrade Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

##### Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

##### User Requirements

Users must be able to access all documents during the upgrade process.

- A. Take all of the content databases offline.

- B. Shrink the content database files.
- C. Reset the indexes and perform a full crawl.
- D. Activate the Content Organizer on all of the site collections.

**Correct Answer:** A

**Section:** (none)

**Explanation/Reference:**

**QUESTION 22**

You are a SharePoint administrator for Graphic Design Institute.

The institute has five departments. Each department offers 20 courses.

You plan to deploy SharePoint Server 2010 on the network.

You need to recommend a maintenance plan for the content databases that meets the institute's database requirements.

What should you include in the recommendations?

**Exhibit:**

The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network.

### **Technical Requirements**

Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.
- Each course site must contain a custom Web Part that retrieves data from a metadata search.
- Each course site must contain a custom navigation bar.
- Each course site must contain a proprietary file type.
- The load time for each course site must be minimized.

### **Database Requirements**

Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:

- The latency of search queries for metadata searches must be minimized.
- The server farm configuration must be backed up weekly.
- White space in the content databases must be minimized.
- The number of databases must be minimized.

### **Student Requirements**

Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:

- Students must be able to manage and organize content that is relevant to them.
- Students must be able to share documents with other students.

### **Security Requirements**

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

- Each department must be able to manage the security of its respective course sites.
- Each department must be able to manage its respective recycle bin.

- A. Shrink the database every six months.
- B. Defragment the hard disk drives of the Web server every three months
- C. Reset the search indexes every three months.
- D. Defragment the hard disk drives of the Web server every six months.

**Correct Answer:** A

## QUESTION 28

You are a SharePoint administrator for Wide World Importers.

You migrate all of the documents from the partner company to a new Web application. You configure the Web application to use Forms-based authentication.

You discover that search results exclude the migrated documents. The search results include all other documents.

You need to ensure that the search results include all of the migrated documents.

What should you create?

### Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

**Planned Server Configuration** As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

### Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. a crawl rule
- B. a search scope
- C. a host distribution rule
- D. a crawler impact rule

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 29**

You are a SharePoint administrator for Wide World Importers.

You need to identify the minimum number of Hyper-V servers required for the planned deployment of SharePoint Server 2010.

How many servers should you identify?

**Exhibit:**

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

**Planned Server Configuration** As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

### Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. 3
- B. 5
- C. 1
- D. 2

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 30**

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution that meets the company's monitoring requirements.

What should you recommend?

**Exhibit:**

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

**Planned Server Configuration** As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

**Technical Requirements**

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

**Monitoring Requirements**

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Web Analytics reports
- B. SharePoint Health Analyzer
- C. administrative reports
- D. Internet Information Services (IIS) logs

**Correct Answer: C**

**Section: (none)****Explanation****Explanation/Reference:****QUESTION 31**

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution to migrate all documents from the partner company to SharePoint-Farm.

What should you include in the solution?

**Exhibit:**

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

**Planned Server Configuration** As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized

**Explanation/Reference:**

**QUESTION 34**

You are a SharePoint administrator for Trey Research.

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

You need to design a maintenance strategy that meets the company's business continuity requirements.

What should you include in the strategy?

**Exhibit:**

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

### Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

The Current Environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

### Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts. SharePoint patches and service packs must be tested before they are deployed to the production environment.

### Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

### User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. separate site collections
- B. sandboxed solutions
- C. a separate server farm
- D. an additional Web server

**Correct Answer: C**

**Section: (none)**

**Explanation/Reference:**

**QUESTION 39**

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named [www.tailspintoys.com](http://www.tailspintoys.com).

You need to recommend a solution to filter the search results based on product category.

What should you include in the solution?

**Exhibit:**

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named [www.tailspintoys.com](http://www.tailspintoys.com).

### **Network Configurations**

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL\_SharePoint. Server4 hosts two non-SharePoint databases named SQL\_Toys and SQL\_Customers.

### **Database Configurations**

SQL\_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL\_Toys. The products are classified in SQL\_Toys by Category. SQL\_Customers contains the credentials that will be used by the customers.

### **User Access Requirements**

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

### **Technical Requirements**

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL\_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

### **Security Requirements**

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL\_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. content sources
- B. host distribution rules
- C. authoritative pages
- D. managed properties

**Correct Answer: D**  
**Section: (none)**

**Explanation****Explanation/Reference:****QUESTION 40**

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named [www.tailspintoys.com](http://www.tailspintoys.com).

You need to recommend a solution to display the company's product information on the SharePoint Web site.

What should you include in the solution?

**Exhibit:**

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named [www.tailspintoys.com](http://www.tailspintoys.com).

### **Network Configurations**

## **Explanation**

### **Explanation/Reference:**

#### **QUESTION 43**

You are a SharePoint administrator for Adventure Works.

You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site.

You need to recommend a solution to convert the catalogs.

What should you include in the solution?

#### **Exhibit:**

##### **Network Configuration**

The company has an internal network and a perimeter network.

##### **Technical Requirements**

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

##### **Security Requirements**

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

##### **Business Process**

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Microsoft SharePoint Designer
- B. InfoPath Forms Services
- C. Word Automation Services
- D. Access Services

**Correct Answer:** C

**Section:** (none)

- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

## Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. One server farm and three site collections
- B. Two server farms and two site collections
- C. Three server farms and two site collections
- D. One server farm and two site collections

**Correct Answer: B**

**Section: (none)**

**Explanation/Reference:**

### QUESTION 45

You are a SharePoint administrator for Adventure Works.

You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company.

You also plan to use SharePoint Server 2010 as the platform for the company's public Web site.

You need to recommend a strategy to prevent the deployment of SharePoint user solutions on the company's public Web site.

What should you recommend?

**Exhibit:**

**Network Configuration**

The company has an internal network and a perimeter network.

**Technical Requirements**

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

**Security Requirements**

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

**Business Process**

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Stop the Sandboxed Code Service.
- B. Disable the Data Retrieval Services.
- C. Disassociate the site from the Access Services service application
- D. Require that all assemblies in solutions be signed.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 46**

You are a SharePoint administrator for Adventure Works.

You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company.

You also plan to use SharePoint Server 2010 as the platform for the company's public Web site.

You need to plan the search requirements for the internal users.

What should you include in the plan?

**Exhibit:**

## Network Configuration

The company has an internal network and a perimeter network.

## Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

### QUESTION 47

You need to design a public Web site. The design must minimize costs and use the minimum amount of administrative effort.

What should you include in the design?

- A. Three Web servers and two Web applications
- B. One Web server and one Web application
- C. Two Web servers and one Web application
- D. One Web server and two Web applications

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 48**

You are a SharePoint administrator for A. Datum Corporation.

The company has a main office and a branch office.

<http://www.gratisexam.com/>

The company has 2,000 users.

You need to design a search solution to meet the company's user requirements. Your solution must minimize costs.

What should you include in the design?

**Exhibit:**

The company has a main office and a branch office. The company has 2,000 users.

### Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

### SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

### Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

### Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

### User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Two servers that have the Web Server role and query component installed, and two servers that have the crawl component installed
- B. Two servers that have the Web Server role and crawl component installed and two servers that have the query component installed
- C. Two servers that have the Web Server role, query component, and crawl component installed
- D. Two servers that have the Web Server role installed, two servers that have the query component installed,

and two servers that have the crawl component installed

**Correct Answer:** C

**QUESTION 55**

You are a SharePoint administrator for Lucerne Publishing.

The company has a main office. The main office is located in London. The company has 200 employees.

The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

You need to recommend a solution to limit search results based on the company's compliance requirements. You must achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

**Exhibit:**

The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

### **Server Configurations**

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

### **Business Requirements**

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

### **Compliance Requirements**

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

### **Capacity Planning**

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

### **Monitoring Requirements**

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

### **Development Process**

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

### **Security Requirements**

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

### **User Requirements**

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. content sources
- B. managed properties

- C. search scopes
- D. authoritative pages

**Correct Answer:** B

### **Capacity Planning**

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

### **Monitoring Requirements**

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

### **Development Process**

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

### **Security Requirements**

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

### **User Requirements**

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. content deployment jobs
- B. SharePoint farm solutions

- C. variations
- D. content deployment paths

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 59**

You need to recommend a multilingual solution for the Tokyo office users. You must achieve this goal by using the minimum amount of administrative effort.

What should you include in the solution?

- A. variations and content deployment
- B. language packs and variations
- C. a new site for the Tokyo users and language packs
- D. a new site for the Tokyo users and content deployment

**Correct Answer:** C

**Section:** (none)

**Explanation/Reference:**

#### **QUESTION 60**

You are a SharePoint administrator for Fabrikam, Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate

intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to recommend a solution to simplify the management of RFPs and related documents.

What should you recommend?

**Exhibit:**

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

### **Content Management Requirements**

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

### **Technical Requirements**

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

### **Security Requirements**

All servers that contain data used by the public site must be physically isolated from the internal servers.

- A. a custom Document Set content type
- B. content deployment paths
- C. the RecordCenter site template
- D. an information management policy

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

### **QUESTION 61**

You are a SharePoint administrator for Fabrikam, Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices

are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to recommend a solution to minimize the effort required to publish content from the intranet to the public Web site.

What should you include in the solution?

**Exhibit:**

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

#### **QUESTION 66**

You are a SharePoint administrator for Fourth Coffee.

The company has 40 offices.

You need to implement an authentication solution that meets the company's security requirements.

What should you do?

**Exhibit:**

#### **Current Environment**

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

#### **Technical Requirements**

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

#### **Business Requirements**

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

#### **Security Requirement**

All users must authenticate to the SharePoint server farm by using smart cards.

- A. Create a new Web application zone and create a new ISAPI filter.
- B. Create a new Web application zone and create an auto-enrollment policy for certificates.
- C. Enable SSL and configure certificate mapping.
- D. Enable SSL and create a new ISAPI filter.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 70**

You are a SharePoint administrator for Wingtip Toys.

The company has a main office and 10 distribution centers. The main office is located in Miami.

The company has 36 departments. Each department has a department manager.

You need to recommend which SharePoint Server 2010 feature meets the technical requirements of the distribution centers.

Which feature should you recommend?

**Exhibit:**

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

#### **Current Environment**

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

#### **SharePoint Server 2007 Configurations**

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

#### **Business Requirements**

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

#### **Taxonomy Requirements**

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

#### **Technical Requirements**

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

#### **Security Requirements**

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

#### **User Requirements**

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. the Application Registry Service
- B. the enterprise site collection feature
- C. the Content Type Syndication Hub
- D. the Publishing Infrastructure

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 71**

You need to recommend a search solution that meets the company's user requirements. You must minimize the amount of effort required to administer a search.

What should you include in the solution?

- A. ☐ two query servers
  - ☐ one crawl server
  - ☐ one mirrored index partition
  - ☐ two property databases
  - ☐ one crawl database
- B. ☐ two query servers
  - ☐ two crawl servers
  - ☐ two index partitions
  - ☐ one mirrored property database
  - ☐ one mirrored crawl database
- C. ☐ two query servers
  - ☐ two crawl servers
  - ☐ one mirrored index partition
  - ☐ one mirrored property database
  - ☐ one mirrored crawl database
- D. ☐ two query servers
  - ☐ two crawl servers
  - ☐ one mirrored index partition
  - ☐ two property databases
  - ☐ two crawl databases

**Correct Answer:** B

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

#### **Current Environment**

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

#### **SharePoint Server 2007 Configurations**

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

#### **Business Requirements**

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

#### **Taxonomy Requirements**

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

#### **Technical Requirements**

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

#### **Security Requirements**

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

#### **User Requirements**

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Active Directory Federation Services (AD FS)
- B. SQL Server authentication
- C. the Secure Store Service
- D. the Data Retrieval Service

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 74**

You are a SharePoint administrator for Wingtip Toys.

The company has a main office and 10 distribution centers. The main office is located in Miami.

The company has 36 departments. Each department has a department manager.

You need to identify which service applications are required to implement the company's taxonomy. The minimum number of service applications must be identified.

Which service applications should you identify?

**Exhibit:**

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

#### **Current Environment**

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

#### **SharePoint Server 2007 Configurations**

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Diagnostic logging
- B. Health Analyzer rule definitions
- C. Usage logging
- D. Microsoft System Center Operations Manager

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 76**

You are the administrator for a SharePoint 2010 farm.

You plan to deploy a Web Part as a sandbox solution in a production environment.

You need to identify the highest degree of isolation.

What should you do? (Choose the best answer.)

- A. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use remote load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use local load balancing and run sandboxed solutions only on specific servers

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 77**

You are the administrator for a SharePoint 2010 farm.

You need to plan the capacity workload for the web front-end servers.

What information should you collect? (Choose the best answer.)

- A. All users and peak load
- B. Concurrent users and peak load
- C. Concurrent users and average throughput each day
- D. All users and average throughput each day

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 78**

You have a SharePoint Server 2010 server farm that contains 10 Web servers.

You need to ensure that the processing of SharePoint user solutions is evenly distributed across the servers in the farm.

What should you do in the server farm?

- A. Configure the Data Retrieval Service
- B. Start the Sandboxed Code Service on all of the Web servers.

- C. Implement Windows Network Load Balancing on all of the web servers.
- D. Create a new Secure Store Service application.

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 79**

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff.

The network contains a single Active Directory domain.

You plan to deploy SharePoint Server 2010 to support both offices.

You need to recommend a solution that meets the following requirements:

- Network traffic across the WAN link must be minimized.
- All documents must be stored on servers located in the office where the documents were created.
- SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. a server farm in each office that has a Web server located in each office
- B. a single server farm that uses two site collections and a Web server in each office
- C. a server farm in each office and a search federation between the farms
- D. a single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 80**

You plan to implement a SharePoint Server 2010 server farm. The farm will be used to store documents that are as much as 100 MB.

You need to recommend a search solution to meet the following requirements:

- Provide security-trimmed search results.
- Provide thumbnail previews of search results.
- Provide the ability to filter searches by using metadata.
- Minimize costs.

What should you recommend?

- A. Microsoft SharePoint search server
- B. Microsoft FAST Search Server
- C. Microsoft Search Server Express

D. Microsoft SQL Server Full-Text Search

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 81**

You have a SharePoint Server 2010 server farm.

Every night, you perform a full backup of the farm and a backup of all the SharePoint databases.

You are planning the recovery strategy for the Secure Store Service.

You need to identify which information is required to recover the Secure Store Service.

What should you identify?

- A. the Secure Store service passphrase
- B. the Central Administration application pool identity
- C. the Secure Store Service application pool identity
- D. the farm passphrase

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 82**

You have a perimeter network and an internal network.

You plan to use SharePoint Server 2010 to host the company's public Web site.

You need to recommend a solution for the site that meets the following requirements:

- Content data must be stored inside the internal network.
- The number of servers must be minimized.

What should you include in the solution?

- A. °Deploy a Web server in the perimeter network.  
°Create a new Active Directory domain in the perimeter network.  
°Deploy a Microsoft SQL Server server in the internal network.
- B. °Deploy a Web server in the perimeter network.  
°Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.  
°Deploy a Microsoft SQL Server server in the internal network.
- C. °Deploy a Web server in the perimeter network.  
°Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.  
°Deploy a Microsoft SQL Server server in the perimeter network.
- D. °Deploy a Web server in the perimeter network.  
°Join the Web server to the internal Active Directory domain.  
°Deploy a Microsoft SQL Server server in the internal network.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

### QUESTION 83

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

- The farm must handle up to 15,000 users.
- The farm must be optimized for search and load balancing
- The farm must be cost-efficient.

Which farm deployment topology should you use? (Choose the best answer.)

- A.
  - ° A first web server that has the Query component
  - ° A second web server that has the Query component
  - ° A single application server that has all service components
  - ° A single database server that contains all SharePoint databases.
- B.
  - ° A first web server that has the Query component
  - ° A second web server that has the Query component
  - ° A single application server that has all other service components
  - ° A first database server that contains Search databases
  - ° A second database server that contains all other SharePoint databases
- C.
  - ° A first web server that does not have the Query component
  - ° A second web server that does not have the Query component
  - ° A third web server that has the Query component
  - ° A first application server that has the query and crawl component
  - ° A second application server that has all other application server components
  - ° A first database server that contains Search databases
  - ° A second database server that contains all other SharePoint databases
- D.
  - ° A first web server that has the Query component
  - ° A second web server that has the Query component and all other service components
  - ° A single database server that contains all SharePoint databases

**Correct Answer:** B

**Section:** (none)

**Explanation**

### QUESTION 84

You plan to deploy SharePoint Server 2010 and to enable self-service site creation.

You need to recommend a Web application configuration to meet the following requirements:

- Users must be allowed to create site collections.

<http://www.gratisexam.com/>

- Site collections created by Web developers must be deleted manually.
- Site collections created by managers must be deleted automatically if they are not used for 120 days.
- Site collections created by other users must be deleted automatically if they are not used for 60 days.
- The number of site collections must be minimized.

What should you include in the recommendations?

- A. one Web application that contains one site collection and one Web application that contains two site collections
- B. one Web application and one site collection
- C. three Web applications that each contains one site collection
- D. one Web application that contains three site collections

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 85**

You are the administrator for a SharePoint 2010 farm.

You need to design a restore plan for end users of documents to meet the following requirements:

- Each user must be able to recover documents that they have deleted.
- Deleted items must be retained for 30 days.
- End users must be able to permanently delete documents when needed.

What should you do? (Choose the best answer.)

- A. °Turn on the first-stage Recycle Bin.  
°Create a Windows Task Schedule for daily backup of sites.
- B. °Turn on the first-stage Recycle Bin.  
°Turn off the second-stage Recycle Bin.
- C. °Turn on the first-stage Recycle Bin.  
°Use Central Administration to back up and restore sites
- D. °Turn off the first-stage Recycle Bin.  
°Use the Microsoft STSADM command-line tool to perform the backup and restore of sites,

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 86**

You have a SharePoint Server 2010 server farm. The farm contains the servers configured as shown in the

following table.

Server name	Server role
Server1	Web
Server2	Web, query, crawl
Server3	Database

You need to ensure that Server2 never crawls SharePoint content through Server1.

What should you create?

- A. an alternate access mapping
- B. a crawl database
- C. a crawl component
- D. an entry in the Hosts file

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 87

You have a SharePoint Server 2010 server farm. The farm contains two Web servers.

The load between the two Web servers is distributed by using DNS round robin.

You need to ensure that the farm is available for all users if one of the web servers fails.

What should you do?

- A. Implement Windows Network Load Balancing.
- B. Add a new Web server to the farm.
- C. Configure netmask ordering.
- D. Configure alternate access mappings

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 88

You are the administrator for a SharePoint 2010 farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for internal users in the corporate network. The network also includes separate Active Directory accounts for external users in the perimeter network.

You want to prevent the perimeter network from accessing internal user accounts.

You need to design the extranet farm topology.

Which type of topology should you use? (Choose the best answer.)

- A. Configure a one-way domain trust where the corporate network trusts the perimeter network.

- B. Configure a one-way domain trust where the perimeter network trusts the corporate network.
- C. Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure.
- D. Configure a two-way domain trust.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 89**

You have a SharePoint Server 2010 server farm. The farm contains a single Web application.

The Web application contains 500 site collections.

You need to recommend a solution to ensure that a user can manage all of the site collections.

You must achieve this goal while meeting the following requirements:

- Ensure that the user cannot create Web applications.
- Use the minimum amount of administrative effort.

What should you recommend?

- A. Configure a managed account.
- B. Add the user to the Farm Administrators group.
- C. Define a policy for the Web application.
- D. Modify the site collection administrators.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 90**

You are the administrator for a SharePoint 2010 farm.

A research team manages documents, photos, video files, and metadata for a clinical case study.

You need to design a logical taxonomy for this clinical case study.

What should you implement? (Choose the best answer.)

- A. A document set.
- B. A document library
- C. A document workspace, a photo gallery, and an asset library.
- D. A set of folders within a document library.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 91**

You are the administrator for a SharePoint 2010 farm.

You need to implement an enterprise search technology that meets the following requirements:

- Allows users to search people and their expertise.
- Crawls content outside the SharePoint.
- Provides metadata-driven refinement in the top results.
- Provides phonetic searches.
- Provides search email alerts.

Which search technology should you use? (Choose the best answer.)

- A. SharePoint Server 2010 Search
- B. FAST Search Server 2010 for SharePoint
- C. Search Server 2010 Express
- D. User Profile Service

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 92**

You need to identify which factors must be considered when implementing site use confirmation and automatic deletion.

Which two factors should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. how often to notify the site owners
- B. the size of the documents stored in inactive sites
- C. the site template used to create the site collection
- D. the number of days a site is inactive

**Correct Answer:** CD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 93**

You have two SharePoint Server 2010 server farms named Farm1 and Farm2.

Farm1 is located in the internal network. Farm1 hosts an authoring site collection that was created by using a publishing site template.

Farm2 is located in the perimeter network, Farm2 hosts a production site collection that was created by using a publishing site template.

A standard content deployment job is scheduled to run every day to move content from Farm1 and Farm2.

You need to recommend a solution to ensure that users can immediately deploy content from Farm1 to Farm2.

The solution must use the minimum amount of administrative effort.

What should you include in the solution?

- A. site definitions
- B. a content deployment Quick Deploy job
- C. site templates
- D. Send to connections

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 94**

You plan to implement SharePoint Server 2010 for your company's public Website. The site will display information about the products that the company sells.

You need to ensure that all the Web pages in the site display the company logo at the top of the page and a copyright notice at the bottom of the page.

What should you implement?

- A. master pages
- B. variations
- C. page layouts
- D. site templates

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 95**

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

- The farm must handle up to 10,000 users.
- The farm must be optimized for search and load balancing
- The farm must be cost-efficient.

Which farm deployment topology should you use? (Choose the best answer.)

- A. ° A first web server that has the Query component
  - ° A second web server that has the Query component
  - ° A single application server that has all other service components
  - ° A first database server that contains Search data bases
  - ° A second database server that contains all other SharePoint databases
- B. ° A first web server that has the Query component
  - ° A second web server that has the Query component
  - ° A single application server that has all service components

- ° A single database server that contains all SharePoint databases.
- C. ° A first web server that has the Query component
  - ° A second web server that has the Query component and all other service components
  - ° A single database server that contains all SharePoint databases
- D. ° A first web server that does not have the Query component
  - ° A second web server that does not have the Query component
  - ° A third web server that has the Query component
  - ° A first application server that has the query and crawl component
  - ° A second application server that has all other application server components
  - ° A first database server that contains Search databases
  - ° A second database server that contains all other SharePoint databases

**Correct Answer:** A

**Explanation/Reference:**

#### **QUESTION 96**

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain three sites named Sales, Corp, and Test.

You plan to monitor the total storage used by each site.

You need to recommend a Web application and site collection configuration. The configuration must meet the following requirements:

- Provide the ability to track the storage used by each specific site.
- Minimize the number of Web applications and site collections.

Which configuration should you recommend?

- A. One Web application, one site collection, and two subsites
- B. One Web application and three site collections
- C. Three Web applications that each have one site collection
- D. One Web application, one site collection, and three subsites

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 97**

You are load testing a SharePoint Server 2010 server farm. You need to simulate 30,000 concurrent user connections.

Which tool should you use?

- A. Internet Information Services (IIS) Manager
- B. Microsoft Visual Studio
- C. Microsoft SQL Server Management Studio
- D. SQL Server Profiler

**Correct Answer:** B

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 98**

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain a Web application for an intranet site and a Web application for an extranet site.

The intranet will contain the following three content areas:

- Human resources
- Finance
- Operations

The extranet will contain the following two content areas:

- Partners
- Customers

All content databases will be backed up by using Microsoft SQL Server.

You need to recommend the minimum number of site collections required for the farm.

You must ensure that each content area can be restored independently.

How many site collections should you recommend?

- A. 2
- B. 7
- C. 1
- D. 5

**Correct Answer: D**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 99**

You plan to implement SharePoint Server 2010 on your company's intranet.

The company has a custom application that contains the contact information of all users.

You need to ensure that you can use the contact information to create custom audiences.

What should you implement?

- A. Access Services and the User Profile Service
- B. Business Connectivity Services and Access Services
- C. Business Connectivity Services and the User Profile Service
- D. The Managed Metadata Service and the User Profile Service

**Correct Answer: C**

**Section: (none)**

## **Explanation**

### **Explanation/Reference:**

#### **QUESTION 100**

You are the administrator for a SharePoint 2010 farm.

You need to plan the capacity workload for the web front-end servers.

What information should you collect? (Choose the best answer.)

- A. Concurrent users and average throughput
- B. Active users and peak load
- C. Active users and average throughput
- D. Concurrent users and peak load

**Correct Answer: B**

**Section: (none)**

## **Explanation**

### **Explanation/Reference:**

#### **QUESTION 101**

You have a SharePoint Server 2010 server farm that contains one Web server. The Web server has only one IP address.

You plan to implement the following separate Web applications:

- http://portal.contoso.com
- http://intranet.contoso.com
- http://www.contoso.com

You need to recommend a solution to ensure that users can access all three Web applications.

What should you include in the solution?

- A. host headers
- B. handler mappings
- C. extended zones
- D. alternate access mappings

**Correct Answer: A**

**Section: (none)**

## **Explanation**

### **Explanation/Reference:**

#### **QUESTION 102**

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do? (Choose the best answer.)

- A. Create a secure store application for the document types and a managed property that references the secure store. Add the new application to the search refinement panel definition.
- B. Create a new list that includes a column to store the document type. Add a lookup to this list in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition
- C. Create a choice column in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.
- D. Create a managed metadata term set for document types and include the managed metadata in the document content type. Add the new column to the search refinement panel definition.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 103**

You are the administrator for a SharePoint 2010 farm. The farm uses the user profile service to synchronize user profiles of employees from Active Directory. Your company stores contact information of employees in a separate Microsoft SQL Server database.

Currently, user profiles do not contain contact information of all employees.

You need to design a solution that will synchronize contact information of employees from the SQL database into user profiles.

What should you do? (Choose the best answer.)

- A. Create a Business Connectivity Services (BCS) external content type in Microsoft Visual Studio 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.
- B. Use the managed metadata service to create a term set for the employee contact fields. Then, configure the user profile service to use this term set, and start a full import
- C. Run the following SharePoint Management PowerShell commands:  
\$Model = Get-SPBusinessDataCatalogMetadataObject -BdcObjectType "Model" -Name "ContosoModel" -ServiceContext http://contoso  
Export-SPBusinessDataCatalogModel -Identity \$Model -Path "C:\folder\model.bdcmodel"
- D. Use Microsoft Visual Studio 2010 to create a timer job that synchronizes data between the SQL database and profile store.
- E. Create a Business Connectivity Services (BCS) external content type in SharePoint Designer 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.

**Correct Answer: E**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 104**

You have a SharePoint Server 2010 server farm.

You plan to implement My Sites.

You need to recommend a solution that prevents personal profile data from appearing in search results.

What should you recommend?

- A. Information management policies
- B. Audiences
- C. User Profile Services policies
- D. Access Services

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 105**

You are the administrator for a SharePoint 2010 farm.

The marketing team in your company manages documents, photos, video files, and metadata for an advertising campaign.

You need to design a logical taxonomy for the specific campaign.

What should you implement? (Choose the best answer.)

- A. A set of folders within a document library.
- B. A document library.
- C. A document set.
- D. A document workspace, a photo gallery, and an asset library

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 106**

You have 10 SharePoint Server 2010 Web servers. All of the servers have the query component installed. You need to ensure that search requests are distributed across all Web servers.

What should you implement?

- A. content sources
- B. a crawler impact rule
- C. a crawl rule
- D. index partitioning

**Correct Answer: D**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 107**

You have a SharePoint Server 2010 server farm that contains two servers.

You need to recommend a solution to ensure that both servers have a complete copy of the index.

What should you recommend?

- A. Add a mirror query component
- B. Add a new crawl database
- C. Add a new crawl component
- D. Add a new query component

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 108**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

°WebApp1 is used by the finance department and use s the URL <http://finance.contoso.com>.

°WebApp2 is used by the marketing department and u ses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to implement SSL in WebApp1.

You need to recommend a solution to ensure that the internal users can access WebApp1 by using HTTP and HTTPS.

What should you include in the recommendation?

- A. service application groups
- B. Remote BLOB Storage (RBS)
- C. the Access Services service application
- D. Microsoft Visual Studio 2010
- E. the Secure Store Service service application
- F. Information Rights Management (IRM)
- G. user policies
- H. managed accounts
- I. cross-firewall access zones
- J. Network Access Protection (NAP)
- K. SharePoint Health Analyzer
- L. a BLOB cache

- M. Active Directory Federation Services (AD FS)
- N. Network Load Balancing (NLB)
- O. an ASP.NET Membership Database
- P. alternate access mappings

**Correct Answer:** P

**Section:** (none)

**Explanation/Reference:**

#### **QUESTION 109**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

°WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.

°WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You need to recommend a solution to authenticate the external users by using the internal Active Directory infrastructure.

What should you include in the recommendation?

- A. Network Access Protection (NAP)
- B. Active Directory Federation Services (AD FS)
- C. The Access Services service application
- D. Network Load Balancing (NLB)
- E. Microsoft Visual Studio 2010
- F. an ASP.NET Membership Database
- G. Remote BLOB Storage (RBS)
- H. the Secure Store Service service application
- I. Information Rights Management (IRM)
- J. a BLOB cache
- K. managed accounts
- L. service application groups
- M. SharePoint Health Analyzer
- N. alternate access mappings

**Correct Answer:** N

#### **QUESTION 110**

You are the administrator for a SharePoint 2010 farm.

You need to grant the Self-Service Site Creation permission to users to create their own sites for the [www.adatum.com/win7](http://www.adatum.com/win7) web application. You also need to ensure that users provide a secondary contact.

What should you do? (To answer, configure the appropriate option or options in the dialog box in the answer area.)

**Hot Area:**

The screenshot shows a dialog box titled "Work Area". At the top, there is a "Web Application:" label followed by a dropdown menu. Below this, there is a text block explaining that enabling Self-Service Site Creation adds an announcement to the top-level Web site's home page, linking to the site creation page (scsignup.aspx). Underneath the text, there are two radio buttons: "On" (which is selected) and "Off". Below the radio buttons, there is a checkbox labeled "Require secondary contact". At the bottom of the dialog, there are "OK" and "Cancel" buttons.

**Correct Answer:**

This screenshot is identical to the one above, but with green highlights indicating the correct configuration. The "On" radio button and the "Require secondary contact" checkbox are both highlighted with green rectangular boxes, indicating they should be selected to meet the requirements.

**Explanation**

**Explanation/Reference:**

**QUESTION 111**

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Available actions:

- Create a managed metadata term set for document types.
- Add the new column to the search refinement panel definition.
- Create a choice column in the document content type.
- Create a new list and include a lookup in the document content type.
- Include the managed metadata in the document content type.
- Add the secure store application to the search refinement panel definition.

**Correct Answer:**

Correct answer sequence:

- Create a managed metadata term set for document types.
- Include the managed metadata in the document content type.
- Add the new column to the search refinement panel definition.

**Explanation**

**Explanation/Reference:**

**QUESTION 112**

You are the administrator for a SharePoint 2010 farm.

You need to move the content database from a Microsoft SQL Server named Server1 to an SQL Server named Server2 within the farm.

What should you do? (To answer, move the appropriate actions from the list of actions in the answer area and arrange them in the correct order.)

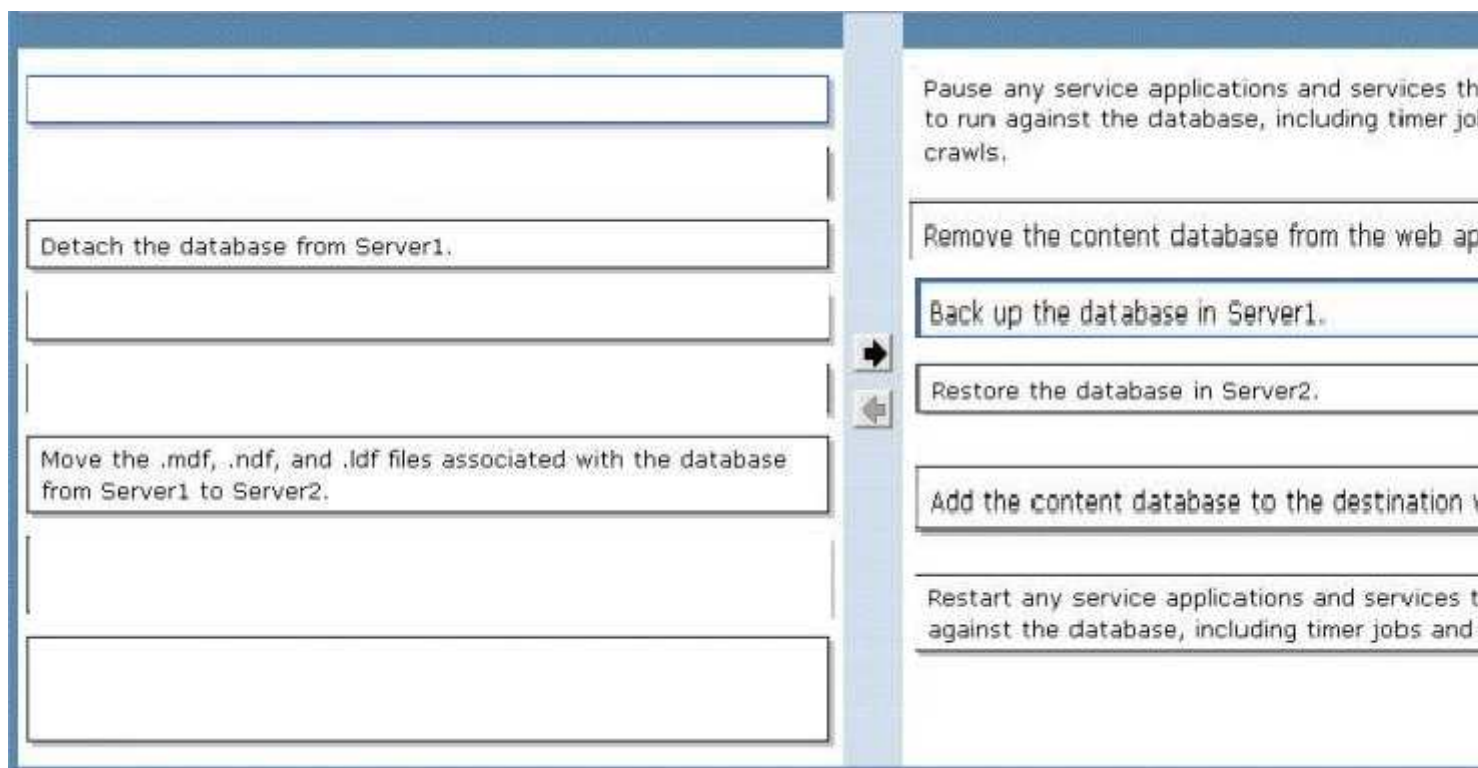

**Select and Place:**

The screenshot shows a 'Select and Place' interface. On the left, there is a list of actions in a scrollable container. The first action, 'Back up the database in Server1.', is highlighted with a blue border. To the right of the list are two arrow buttons: a right-pointing arrow and a left-pointing arrow. On the right side of the interface is a large, empty rectangular area for placing the selected actions.

- Back up the database in Server1.
- Restore the database in Server2.
- Detach the database from Server1.
- Remove the content database from the web application.
- Add the content database to the destination web application.
- Move the .mdf, .ndf, and .ldf files associated with the database from Server1 to Server2.
- Restart any service applications and services that must be run against the database, including timer jobs and search crawls.
- Pause any service applications and services that might attempt to run against the database, including timer jobs and search crawls.

**Correct Answer:**

### QUESTION 113

You are the administrator for a SharePoint 2010 farm.

The farm topology is as shown in the following table.

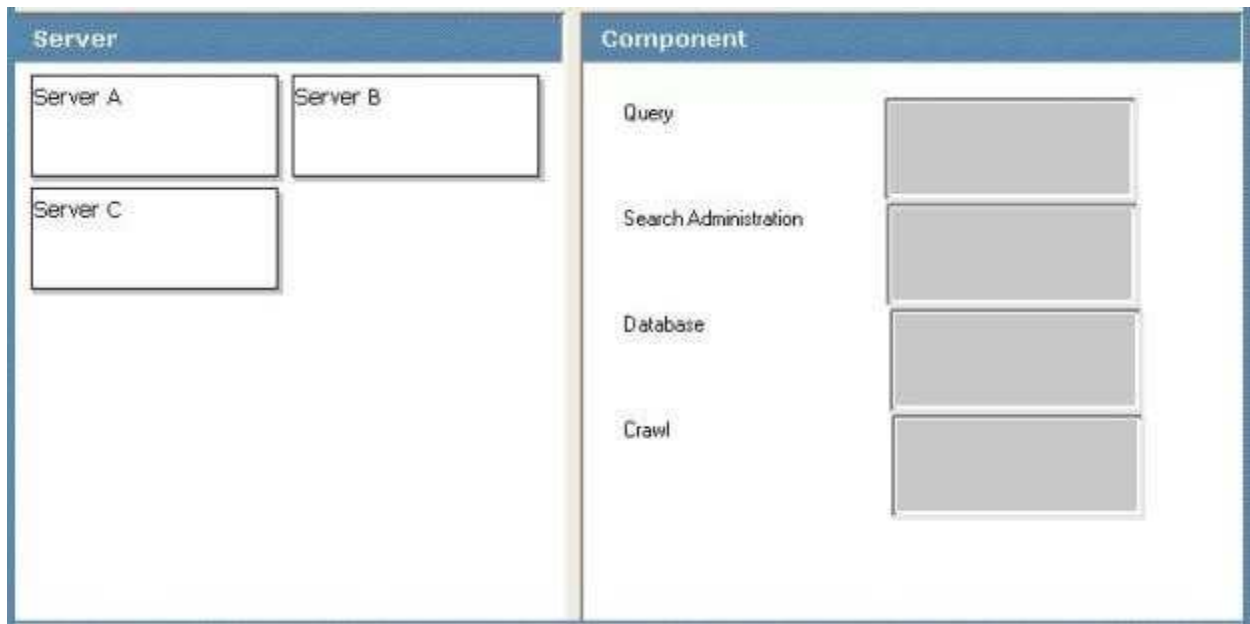

Servers	Roles
Server A	<ul style="list-style-type: none"> <li>Web Front End</li> <li>All service applications</li> </ul>
Server B	<ul style="list-style-type: none"> <li>Microsoft SQL Server 2008</li> </ul>

You want to improve the performance of the search.

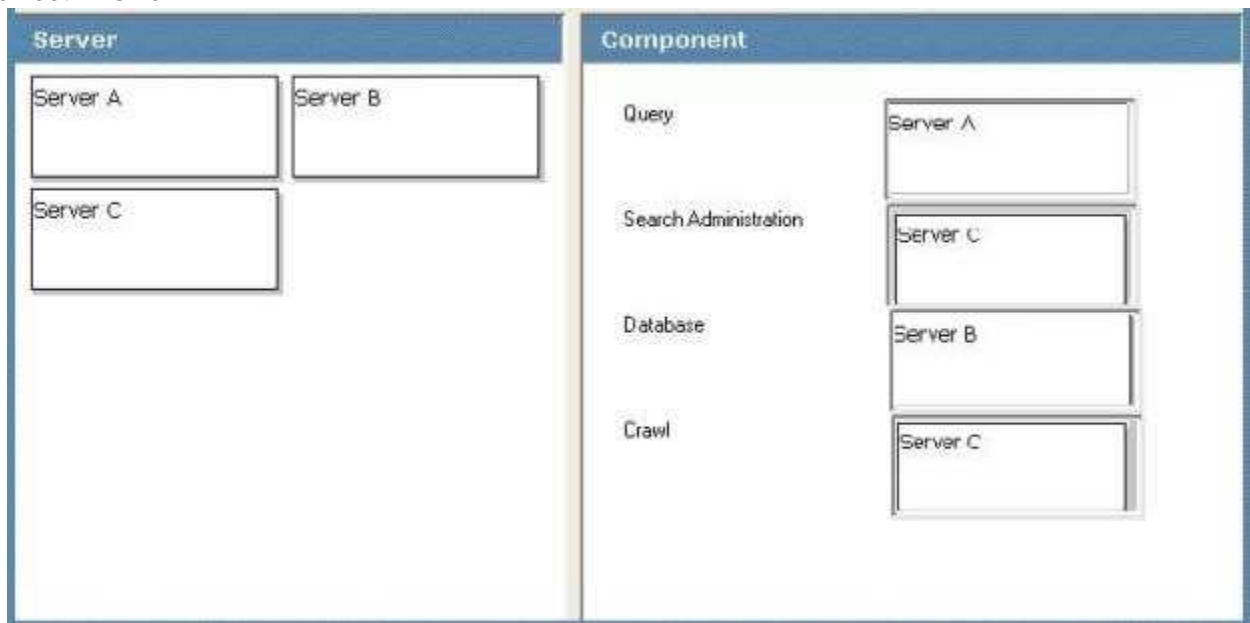

You need to add an application server named Server C.

Which component should you place on each of the three servers? (To answer, drag the appropriate server or server to the correct location or locations in the answer area.)

**Select and Place:**

**Correct Answer:**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 114**

You are the administrator for a SharePoint 2010 farm. You use Kerberos authentication and dedicated service accounts for each SharePoint 2010 service.

You want to use Microsoft Excel Services and Microsoft Visio Services service applications to analyze Line-of-Business (LOB) data located on a Microsoft SQL Server in the same domain.

Microsoft SQL Server Reporting Services (SSRS) in SharePoint Integrated mode will be used to report data located on another domain in the forest.

Which type of delegation should you use for the service accounts? (To answer, drag the appropriate delegation type or types to the correct location or locations in the answer area.)

**Select and Place:**

Delegation	Service Accounts
Constrained Delegation	Excel Services
Basic Delegation	c2WTS
	Visio Services
	SSRS

**Correct Answer:**

Delegation	Service Accounts
Constrained Delegation	Excel Services
Basic Delegation	c2WTS
	Visio Services
	SSRS

#### **QUESTION 115**

You are the administrator for a SharePoint 2010 farm.

You plan to acquire SharePoint 2010 licenses.

Which features are included in each version of SharePoint? (To answer, drag the appropriate version or versions to the correct location or locations in the answer area.)

**Select and Place:**

SharePoint Version	Feature
SharePoint 2010 Foundation	Document Libraries: <input type="text"/>
SharePoint 2010 Standard	Unique Document IDs: <input type="text"/>
SharePoint 2010 Enterprise	Document Sets: <input type="text"/>
	Content Types: <input type="text"/>
	Visio Services: <input type="text"/>

**Correct Answer:**

SharePoint Version	Feature
SharePoint 2010 Foundation	Document Libraries: SharePoint 2010 Foundation
SharePoint 2010 Standard	Unique Document IDs: SharePoint 2010 Standard
SharePoint 2010 Enterprise	Document Sets: SharePoint 2010 Standard
	Content Types: SharePoint 2010 Foundation
	Visio Services: SharePoint 2010 Enterprise

**Explanation**

**Explanation/Reference:**

**QUESTION 116**

You are the administrator for a SharePoint 2010 farm.

You create a top-level site named SiteA that uses Windows authentication and the default permission set.

You need to design the security schema for the following taxonomy:

Securable object	Description
SiteA/SubsiteA	Sensitive group
SiteA/SubsiteA/ListA	Non-sensitive data
SiteA/SubsiteA/LibraryA	Non-sensitive documents, but has one or more sensitive items
SiteA/SubsiteB	Group shared project information
SiteA/SubsiteB/ListB	Non-sensitive data, but has one or more sensitive items
SiteA/SubsiteB/LibraryB	Non-sensitive documents, but has a special folder that contains sensitive items

Which type of permissions should you implement? (To answer, drag the appropriate permission or permissions to the correct location or locations in the answer area.)

**Select and Place:**

Source Heading	Securable object
Inherited	SiteA/SubsiteA
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB
	SiteA/SubsiteB/ListB
	SiteA/SubsiteB/LibraryB

**Correct Answer:**

Source Heading	Securable object	
Inherited	SiteA/SubsiteA	Inherited
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA	Unique, has Copy permissions from SiteA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA	Inherited, has unique permissions at the item level
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB	Inherited
	SiteA/SubsiteB/ListB	Inherited, has unique permissions at the item level
	SiteA/SubsiteB/LibraryB	Inherited, has unique permissions at the folder and item levels

#### **QUESTION 117**

You are the administrator for a SharePoint 2010 farm.

You need to make a site collection publicly available at the following URL:  
<http://books.fabrikam.com>.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Extend the web application to a new website.	
Set the <b>Allow Anonymous</b> setting on the website extension to <b>Yes</b> .	
Set the <b>Allow Anonymous</b> setting on the new web application to <b>Yes</b> .	
Set the <b>Alternate Access Mapping</b> setting to <b>http://books.fabrikam.com</b> .	→
Set the <b>Anonymous Access Permission</b> setting on the site collection to <b>Entire Site</b> .	←
Set the <b>Host Header</b> setting on the website extension to <b>http://books.fabrikam.com</b> .	

Correct Answer:

Set the <b>Allow Anonymous</b> setting on the new web application to <b>Yes</b> .	
Set the <b>Alternate Access Mapping</b> setting to <b>http://books.fabrikam.com</b> .	→
	←

Extend the web application to a new website.
Set the <b>Host Header</b> setting on the website extension to <b>http://books.fabrikam.com</b> .
Set the <b>Allow Anonymous</b> setting on the new web application to <b>Yes</b> .
Set the <b>Anonymous Access Permission</b> setting on the site collection to <b>Entire Site</b> .

#### QUESTION 119

You are the administrator for a SharePoint 2010 farm.

You need to deploy a custom site to the top site of a site collection on the production farm.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Upload and activate the WSP file.	
Save the custom site as a site template.	
Create a site collection by using an empty site.	
Create a site collection by using a blank site definition.	
Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.	→
Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.	←

**Correct Answer:**

Create a site collection by using a blank site definition.	
Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.	→
Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.	←

Save the custom site as a site template.
Create a site collection by using an empty site.
Upload and activate the WSP file.

#### QUESTION 120

You are the administrator for a SharePoint 2010 server farm named Farm1.

You create a second farm named Farm2 that is publicly available to host a public website.

You need to design a solution that will allow you to deploy web content from Farm1 to Farm2 on a scheduled basis.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Create a quick deploy job in Central Administration on Farm1.	
Create a content deployment job in Central Administration on Farm1.	
Configure Farm1 to accept incoming content deployment jobs.	
Configure Farm2 to accept incoming content deployment jobs.	
Create a content deployment path in Central Administration on Farm1.	
Create a content deployment path in Central Administration on Farm2.	

**Correct Answer:**

Create a quick deploy job in Central Administration on Farm1.	Configure Farm2 to accept incoming content deployment jobs.
	Create a content deployment path in Central Administration on Farm1.
Configure Farm1 to accept incoming content deployment jobs.	Create a content deployment job in Central Administration on Farm1.
Create a content deployment path in Central Administration on Farm2.

**Explanation**

**Explanation/Reference:**

**QUESTION 121**

You are the administrator for a SharePoint 2010 farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

- High availability of the server
- Maximum response time

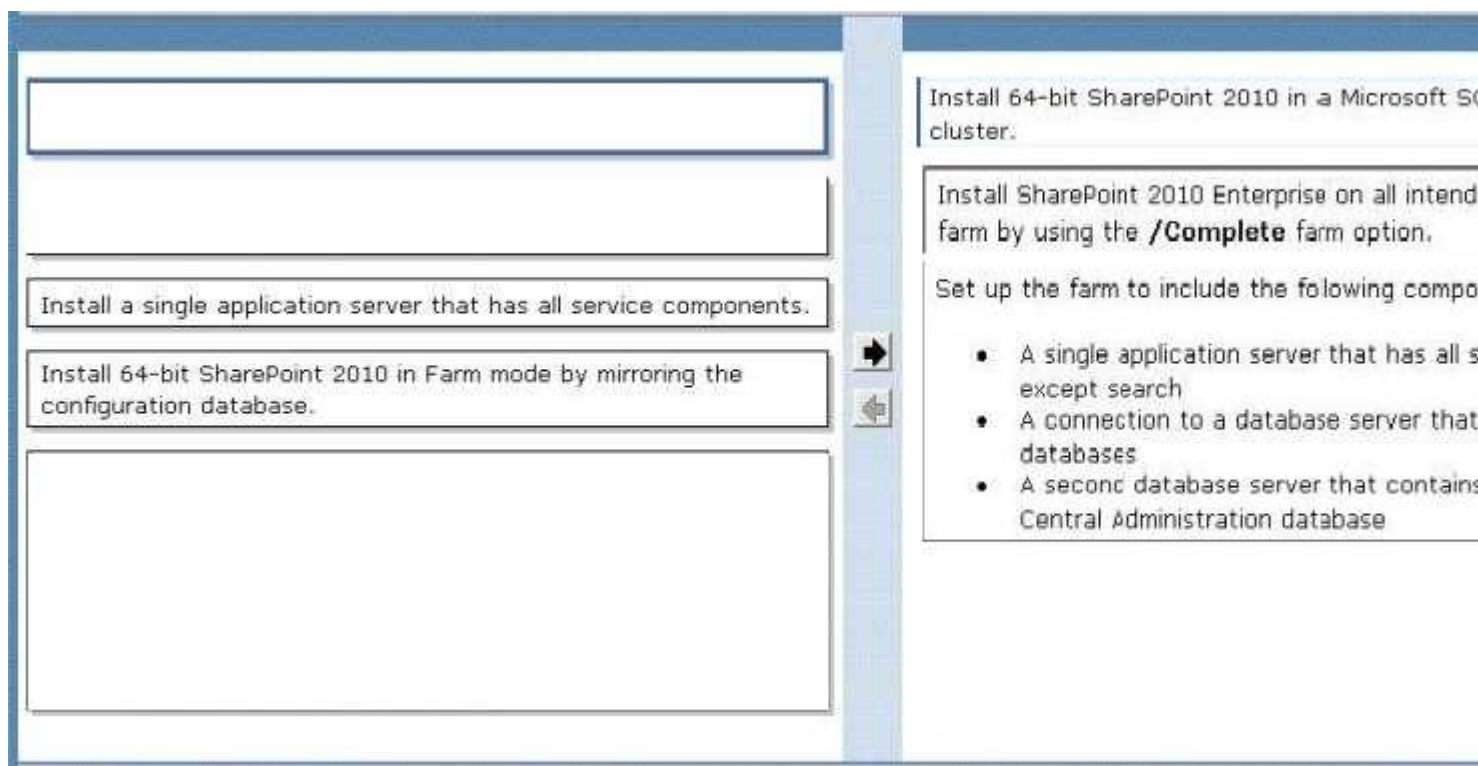

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

The screenshot shows a 'Select and Place' interface. On the left, there is a list of five actions in rectangular boxes. On the right, there is a large empty rectangular area for placing the selected actions. Between the list and the answer area are two arrows: a right-pointing arrow at the top and a left-pointing arrow at the bottom. The actions in the list are:

- Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.
- Install SharePoint 2010 Enterprise on all intended servers in the farm by using the **/Complete** farm option.
- Install a single application server that has all service components.
- Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.
- Set up the farm to include the following components:
  - A single application server that has all service components except search
  - A connection to a database server that contains Search databases
  - A second database server that contains the SharePoint Central Administration database

**Correct Answer:**

#### **QUESTION 122**

You are the administrator for a SharePoint 2010 server farm named Contoso Intranet.

You create a second farm named Contoso Public that is publicly available to host a public website.

You need to design a solution that will allow you to deploy web content from Contoso Intranet to Contoso Public on a scheduled basis.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Create a quick deploy job in Central Administration on Contoso Intranet.	 
Create a content deployment job in Central Administration on Contoso Intranet.	
Configure Contoso Intranet to accept incoming content deployment jobs.	
Configure Contoso Public to accept incoming content deployment jobs.	
Create a content deployment path in Central Administration on Contoso Intranet.	
Create a content deployment path in Central Administration on Contoso Public.	

**Correct Answer:**

Create a quick deploy job in Central Administration on Contoso Intranet.	 
Configure Contoso Intranet to accept incoming content deployment jobs.	
Create a content deployment path in Central Administration on Contoso Public.	

Configure Contoso Public to accept incoming content deployment jobs.
Create a content deployment path in Central Administration on Contoso Intranet.
Create a content deployment job in Central Administration on Contoso Intranet.
