CertifyMe-70-668

Exam A

QUESTION 1

You are a SharePoint administrator for Proseware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a monitoring solution that meets the company's technical requirements. What should you recommend?

Exhibit:

The company has more than 50,000 electronic books stored on a file server. Each electronic book contains two files. One file contains the content and the other file contains a high-resolution image of the book cover. The image files are larger than 50 MB. You plan to deploy a SharePoint Server 2010 server farm and to migrate all of the electronic books to SharePoint.

Server Configurations

Proseware has 10 unused servers that run Windows Server 2003 (64-bit). Two of the servers run Microsoft SQL Server 2005 (64-bit).

Technical Requirements

Proseware administrators have the following technical requirements for the planned SharePoint Server 2010 deployment:

- Must be able to monitor search queries and identify which queries do not return results.
- Must have access to self-service reports on average page usage and average site usage.
- Must be able to minimize the amount of disk I/O on the SQL databases when users retrieve the book cover images.

Availability Requirements

Proseware has the following availability requirements for the planned SharePoint Server 2010 deployment:

- Crawling fault tolerance is not required.
- Crawling of content must not affect the performance of Web servers.
- Users must be able to access SharePoint sites and content if a single server fails.
- Users must be able to access and search SharePoint sites if a single SharePoint server fails.

User Requirements

Proseware has the following user requirements for the planned SharePoint Server 2010 deployment:

- Managers must be able to monitor ongoing business metrics by using scorecards.
- Managers must be able to view aggregate data from multiple sources by using dashboards.

- A. Web Analytics reports
- B. PerformancePoint Services
- C. Information management policy usage reports
- D. Diagnostic logging

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q001

BURGOS MNEMO: = "**Web Analytics** reports" (if you have not Administrative Reports)

BURGOS COMMENTS:

About "Web Analytics" in Q001, Q041:

IF exhibit talks about "query latency" THEN "Admin reports"

ELSE "Web Analytics"

About "PerformancePoint" in Q001, Q049, Q078, Q098, Q111, Q113:

IF "to gather KPIs" OR "business intelligence strategy" OR APPEARS "Import" in same choice THEN "PerformancePoint Services"

ELSE other

About "Information management policies" in Q001, Q017, Q025, Q036, Q090, Q098, Q105:

IF HAVE "Web Analytics" OR "UPS" OR "Document Set" OR "use confirmation" OR "document library" OR "PerformancePoint" THEN is this,

OTHERWISE "Information management policies"

ORIGINAL COMMENTS:

To be able to access self-service reports on average page usage and average site usage you must use Web Analytics reports.

QUESTION 2

You have a SharePoint Server 2010 server farm that contains one Web server. The Web server has only one IP address. You plan to implement the following Web applications:

- http://portal.contoso.com
- http://intranet.contoso.com
- http://www.contoso.com

You need to recommend a solution to ensure that users can access all three Web applications. What should you include in the solution?

- A. Host headers
- B. Handler mappings
- C. Extended zones
- D. Alternate access mappings

Correct Answer: A

Section: (none)

Explanation**Explanation/Reference:**

Q002

BURGOS MNEMO: = "**Host headers**"

ORIGINAL COMMENTS:

Due to the fact that the Web server only has one IP address and you want to host multiple applications/web sites, you can only use host headers to accomplish this.

QUESTION 3

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain a Web application for an intranet site and a Web application for an extranet site. The intranet will contain the following three content areas:

- Human resources
- Finance
- Operations

The extranet will contain the following two content areas:

- Partners
- Customers

All content databases will be backed up by using Microsoft SQL Server. You need to recommend the minimum number of site collections required for the farm. You must ensure that each content area can be restored independently. How many site collections should you recommend?

- A. 7
- B. 5
- C. 2
- D. 1

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q003

BURGOS MNEMO: "number of site collection" = "5"

BURGOS COMMENTS:

About Numeric Questions Q003, Q047, Q059, Q080, Q086, Q088, Q089, Q110, Q118:

THEN = "2" IF "number of Hyper-V servers" OR "number of zones" OR number of index partitions (Q047, Q080, Q089)

THEN = "2" IF "number of WEB servers" (Q118)

THEN = "3" IF "number of servers" (if apperas on exhibit "crawling fault tolerance is not required") (Q110)

THEN = "4" IF "number of servers" (SQL fault tolerance) (Q086)

THEN = "5" IF "number of site collection 3+2" (Q003)

THEN = "13" IF "number of site collection 10+1+1+1" (Q089)

ELSE > "20" ("40" OR "50") IF "number of content databases" (Q059, Q088)

ORIGINAL COMMENTS:

To be able to restore each application independantly, you need to create separate site collections. Three internal and two external site collections, five in total.

QUESTION 4

You plan to deploy SharePoint Server 2010 and to enable self-service site creation. You need to recommend a Web application configuration to meet the following requirements:

- Users must be allowed to create site collections.
- Site collections created by Web developers must be deleted manually.
- Site collections created by managers must be deleted automatically if they are not used for 120 days.
- Site collections created by other users must be deleted automatically if they are not used for 60 days.
- The number of site collections must be minimized.

What should you include in the recommendations?

- A. Three Web applications that each contains one site collection
- B. One Web application that contains three site collections
- C. One Web application that contains one site collection and one Web application that contains two site collections
- D. One Web application and one site collection

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q004

BURGOS MNEMO: "minimize site" = "3 WebApp, 1 site"

BURGOS COMMENTS:

About pair Q004, Q018:

Q004: 3/1 - asks for "minimize site"

Q018: 1/3 - asks for "minimize app"

ORIGINAL COMMENTS:

Because of the requirements that

a) state that a certain group must be allowed to manually delete site collections

b) state that site collections created by managers must be deleted if not used for 120 days

c) state that site collections created by other users must be deleted if not used for 60 days

you cannot create less than 3 web applications. The requirements simply cannot fit into one web application.

QUESTION 5

You have a SharePoint Server 2010 server farm that contains two servers. You need to recommend a solution to ensure that both servers have a complete copy of the index. What should you recommend?

<http://www.gratisexam.com/>

- A. Add a new query component
- B. Add a new crawl database
- C. Add a new crawl component
- D. Add a mirror query component

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q005

BURGOS MNEMO: "both servers have a complete copy of the index" = "**mirror query**"

BURGOS COMMENTS:

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

OTHERWISE, crawl component (see that in this case, "components" appear in plural).

--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

To allow both servers to have a copy of the index, create a mirror query component.

Add or remove a query component

<http://technet.microsoft.com/en-us/library/ff428118.aspx>

QUESTION 6

You have multiple SharePoint Server 2010 server farms located in the following cities:

- Lisbon

- New York
- Auckland

You need to recommend a solution to aggregate all SharePoint application events. The solution must minimize the amount of network traffic. What should you recommend?

- A. Replicate the trace logs and the logging databases to a central location.
- B. Implement Microsoft Systems Center Operations Manager.
- C. Implement Microsoft SQL Server log shipping.
- D. Configure usage and health data collection.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q006

BURGOS MNEMO: = "Configure **usage and health** data collection"

BURGOS COMMENTS:

About "Systems Center Operations Manager" in Q006, Q048, Q066, Q104, Q113, Q123:

IF "monitoring solution for the crawl" THEN "Systems Center Operations Manager"
ELSE other

ORIGINAL COMMENTS:

Since the solution must minimize network traffic, it is best to localize the monitoring of the SharePoint environment by utilizing SharePoint Health Analyzer.

Configure usage and health data collection

<http://technet.microsoft.com/en-us/library/ee663480.aspx>

If there was a requirement to be able to centrally monitor all servers outside of the SharePoint environment, Systems Center Operations Manager would be a better option. However, nothing in the question seems to indicate this requirement.

Microsoft Systems Center helps you deliver and ensure a reliable end-user experience with your SharePoint services by monitoring, managing, and protecting the SharePoint environment.

Solutions for Optimizing SharePoint

<http://www.microsoft.com/systemcenter/en/us/optimizing-sharepoint.aspx>

QUESTION 7

You have a perimeter network and an internal network. You plan to use SharePoint Server 2010 to host the company's public Web site. You need to recommend a solution for the site that meets the following requirements:

- Content data must be stored inside the internal network.
- The number of servers must be minimized.

What should you include in the solution?

- A. Deploy a Web server in the perimeter network.
Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
Deploy a Microsoft SQL Server server in the perimeter network.
- B. Deploy a Web server in the perimeter network.
Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
Deploy a Microsoft SQL Server server in the internal network.
- C. Deploy a Web server in the perimeter network.
Join the Web server to the internal Active Directory domain.

- Deploy a Microsoft SQL Server server in the internal network.
- D. Deploy a Web server in the perimeter network.
Create a new Active Directory domain in the perimeter network.
Deploy a Microsoft SQL Server server in the internal network.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q007

BURGOS MNEMO: = "Deploy ... Join ... Deploy" (with "**perimeter network**" in choices with tree phrases)

BURGOS COMMENTS:

About "AD LDS" in Q007, Q060, Q092

IF OTHER COICES ("AD RMS", "AD FS", "ALG") THEN is "AD LDS"

ELSE other

ORIGINAL COMMENTS:

Using existing resources, such as an AD domain, is what leads to answer C. Both C and D are plausible, with C as using the least number of servers.

QUESTION 8

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff. The network contains a single Active Directory domain. You plan to deploy SharePoint Server 2010 to support both offices. You need to recommend a solution that meets the following requirements:

- Network traffic across the WAN link must be minimized.
- All documents must be stored on servers located in the office where the documents were created.
- SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. A single server farm that uses two site collections and a Web server in each office
- B. A single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices
- C. A server farm in each office that has a Web server located in each office
- D. A server farm in each office and a search federation between the farms

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q008

BURGOS MNEMO: = "**search federation**"

ORIGINAL COMMENTS:

To comply to the requirement of storing documents on localized servers, you should create a server farm in each office. To be able to search both farms/offices for documents, you should implement a search federation between both farms.

QUESTION 9

You have a SharePoint Server 2010 server farm that contains 10 Web servers. You need to ensure that the processing of SharePoint user solutions is evenly distributed across the servers in the farm.

What should you do in the server farm?

- A. Implement Windows Network Load Balancing on all of the Web servers.
- B. Start the Sandboxed Code Service on all of the Web servers.
- C. Create a new Secure Store Service application.
- D. Configure the Data Retrieval Service.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q009

BURGOS MNEMO: = "**Sandboxed Code Service**"

BURGOS COMMENTS:

About "Sandboxed" in Q009, Q052, Q061, Q101:

IF HAVE "separate server farm" (Trey researchs) THEN is this
ELSE "Sandboxed".

About "NLB" in Q009, Q014, Q058:

IF "distributed across" only THEN Sandboxed
IF cluster solution for Web THEN "NLB",
IF for SQL THEN Failover Cluster

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this
("SSS")
ELSE no.

ORIGINAL COMMENTS:

User code solutions are made available by using the Sandboxed Code Service.

Sandboxed solutions administration

<http://technet.microsoft.com/en-us/library/ee704542.aspx>

QUESTION 10

You need to identify which factors must be considered when implementing site use confirmation and automatic deletion. Which two factors should you identify? (Each correct answer presents part of the solution. Choose two)

- A. The site template used to create the site collection
- B. The size of the documents stored in inactive sites
- C. The number of days a site is inactive
- D. How often to notify the site owners

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

Q010

BURGOS MNEMO: = "**number of days**" and "**often to notify**"

BURGOS COMMENTS:

@Junkie put AC, but the correct is CD according @LAG, @Dizzlin, @msamy508, @Offspringer

After, @vs2010junkie agree after comment and put the following explanation:

Site Use Confirmation and Automatic Deletion: Stsadm properties

[http://technet.microsoft.com/en-us/library/cc263074\(office.12\).aspx](http://technet.microsoft.com/en-us/library/cc263074(office.12).aspx)

QUESTION 11

You have two SharePoint Server 2010 server farms named Farm1 and Farm2. Farm1 is located in the internal network. Farm1 hosts an authoring site collection that was created by using a publishing site template.

Farm2 is located in the perimeter network. Farm2 hosts a production site collection that was created by using a publishing site template. A standard content deployment job is scheduled to run every day to move content from Farm1 and Farm2.

You need to recommend a solution to ensure that users can immediately deploy content from Farm1 to Farm2. The solution must use the minimum amount of administrative effort. What should you include in the solution?

- A. Site templates
- B. Site definitions
- C. Send To connections
- D. A content deployment Quick Deploy job

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q011

BURGOS MNEMO: "immediately deploy content" = "Quick Deploy job"

BURGOS COMMENTS:

About "Site definitions" in Q011, Q122:

IF HAVE "Quick Deploy job" choice THEN is this

ELSE "Site definitions"

About "content deployment" in Q011, Q025, Q028, Q031, Q055, Q056, Q061, Q081, Q104, Q114:

IF APPEARS WITH "quick deploy" in same choice OR HAVE "Log Shipping" in other choice THEN "Content deployment",

OTHERWISE, no.

ORIGINAL COMMENTS:

To be able to immediately deploy content (thus not having to wait for the scheduled deployment) you must use a Quick Deploy job.

Manage Quick Deploy jobs

<http://technet.microsoft.com/en-us/library/cc262560.aspx>

QUESTION 12

You plan to implement SharePoint Server 2010 for your company's public Website. The site will display information about the products that the company sells. You need to ensure that all the Web pages in the site display the company logo at the top of the page and a copyright notice at the bottom of the page. What should you implement?

- A. Variations
- B. Site templates
- C. Page layouts
- D. Master pages

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q012

BURGOS MNEMO: "Logo on **top of the page**" = "Master page"**BURGOS COMMENTS:**

About "Master Page" in Q012, Q122:

IF HAVE "Site definitions" THEN "Site definitions"

ELSE "Master Page" choice.

About "Page Layouts" in Q012: Instead of 70-667, "Page Layouts" never appears as correct answer.

ORIGINAL COMMENTS:

Since all pages should contain the company logo and a copyright notice at the bottom, you can only accomplish this using modified master pages.

QUESTION 13

You have a SharePoint Server 2010 server farm. The farm contains a single Web application. The Web application contains 500 site collections. You need to recommend a solution to ensure that a user can manage all of the site collections. You must achieve this goal while meeting the following requirements:

- Ensure that the user cannot create Web applications.
- Use the minimum amount of administrative effort.

What should you recommend?

- A. Add the user to the Farm Administrators group.
- B. Modify the site collection administrators.
- C. Define a policy for the Web application.
- D. Configure a managed account.

Correct Answer: C**Section: (none)****Explanation****Explanation/Reference:**

Q013

BURGOS MNEMO: = "**Define a policy**"**ORIGINAL COMMENTS:**

Allowing or denying the ability to create a Web application can be done by using policies.

QUESTION 14

You have a SharePoint Server 2010 server farm. The farm contains two Web servers. The load between the two Web servers is distributed by using DNS round robin. You need to ensure that the farm is available for all users if one of the Web servers fails. What should you do?

- A. Configure alternate access mappings.
- B. Implement Windows Network Load Balancing.
- C. Configure netmask ordering.
- D. Add a new Web server to the farm.

Correct Answer: B**Section: (none)****Explanation****Explanation/Reference:**

Q014

BURGOS MNEMO: "DNS **round robin**" ... "**if one of the Web servers fails**" = "NLB"

BURGOS COMMENTS:

About "NLB" in Q009, Q014, Q058:

- IF "distributed across" only THEN Sandboxed
- IF cluster solution for Web THEN "NLB",
- IF for SQL THEN Failover Cluster

ORIGINAL COMMENTS:

Since DNS round robin is used to distribute the load to each of the servers, you should configure NLB and add the two Web servers to the NLB cluster group.

QUESTION 15

You plan to implement SharePoint Server 2010 on your company's intranet. The company has a custom application that contains the contact information of all users. You need to ensure that you can use the contact information to create custom audiences. What should you implement?

- A. The Managed Metadata Service and the User Profile Service
- B. Business Connectivity Services and the User Profile Service
- C. Business Connectivity Services and Access Services
- D. Access Services and the User Profile Service

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q015

BURGOS MNEMO: "create custom audiences" = "BCS / User Profile Service"

BURGOS COMMENTS:

About 2 services ("BCS", "UPS," "SSS") in Q015, Q077:

- IF "BCS" stand alone THEN other
- ELSE ALWAYS "BCS" with
- IF "SSS" THEN is this
- ELSE "UPS"

About "MMS" in Q015, Q030, Q055, Q067, Q070:

- IF "Taxonomy" or "Research department": THEN "MMS".
- IF HAVE "create custom audiences" THEN is this instead of "MMS".

About "UPS" in Q015, Q017, Q064, Q077, Q093:

- IF HAVE TOGETHER ("BCS" and "SSS") OR HAVE "Disassociate the extranet" THEN is this
- ELSE "UPS" (with "BCS" if have two services)

ORIGINAL COMMENTS:

The fact that the company uses a custom application that contains contact information leads to using Business Connectivity Services. Being able to create audiences is done by using the User Profile Service.

QUESTION 16

You plan to implement a SharePoint Server 2010 server farm. The farm will be used to store documents that are as much as 100 MB. You need to recommend a search solution to meet the following requirements:

- Provide security-trimmed search results.
- Provide thumbnail previews of search results.
- Provide the ability to filter searches by using metadata.
- Minimize costs.

What should you recommend?

- A. Microsoft SQL Server Full-Text Search

- B. Microsoft Search Server Express
- C. Microsoft FAST Search Server
- D. Microsoft SharePoint search server

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q016

BURGOS MNEMO: = "Microsoft **FAST Search Server**"

ORIGINAL COMMENTS:

Because of the need to be able to filter searches by using metadata, the only applicable solution is using FAST Search Server.

QUESTION 17

You have a SharePoint Server 2010 server farm. You plan to implement My Sites. You need to recommend a solution that prevents personal profile data from appearing in search results. What should you recommend?

- A. User Profile Services policies
- B. Information management policies
- C. Audiences
- D. Access Services

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q017

BURGOS MNEMO: "**prevents personal profile** data from appear..." = "**User Profile Services policies**"

BURGOS COMMENTS:

About "Audiences" in Q017, Q021, Q125:

IF "WebParts may be visible to an specific department" THEN "Audiences"

ELSE no

About "UPS" in Q015, Q017, Q064, Q077, Q093:

IF HAVE TOGETHER ("BCS" and "SSS") OR HAVE "Disassociate the extranet" THEN is this

ELSE "UPS" (with "BCS" if have two services)

About "Information management policies" in Q001, Q017, Q025, Q036, Q090, Q098, Q105:

IF HAVE "Web Analytics" OR "UPS" OR "Document Set" OR "use confirmation" OR "document library" OR "PerformancePoint" THEN is this,

OTHERWISE "Information management policies"

ORIGINAL COMMENTS:

Profile data is pulled from the User Profile Service. In order to prevent this (or certain parts, items or objects) you should use the User Profile Services policies.

QUESTION 18

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain three sites named Sales, Corp, and Test. You plan to monitor the total storage used by each site. You need to recommend a Web application and site collection configuration. The configuration must meet the following requirements:

- Provide the ability to track the storage used by each specific site.
- Minimize the number of Web applications and site collections.

Which configuration should you recommend?

- A. Three Web applications that each have one site collection
- B. One Web application, one site collection, and three subsites
- C. One Web application, one site collection, and two subsites
- D. One Web application and three site collections

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q018

BURGOS MNEMO: "minimize WebApp" = "1 WebApp, 3 site"

BURGOS COMMENTS:

About pair Q004, Q018:

Q004: 3/1 - asks for "minimize site"

Q018: 1/3 - asks for "minimize app"

Since one of the requirements is minimizing the number of Web applications, you should create just one. In order to track the storage used by each specific site, you should create three site collections in the Web application.

QUESTION 19

You have 10 SharePoint Server 2010 Web servers. All of the servers have the query component installed. You need to ensure that search requests are distributed across all Web servers. What should you implement?

- A. Index partitioning
- B. Content sources
- C. A crawl rule
- D. A crawler impact rule

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q019

BURGOS MNEMO: "search requests are distributed across all Web servers" = "Index partitioning"

BURGOS COMMENTS:

About "Index Partition" in Q019, Q044, Q096:

IF "distributed across web servers" THEN "Index Partition"

ELSE no.

About "crawl rule" and "crawler impact rule" in Q019, Q042, Q051, Q072:

IF HAVE "Index partition" OR "Authoritative pages" THEN is this,

ELSE IF "include all of the migrated documents" THEN "crawl rule"

ELSE IF "minimize the amount of resources" THEN "crawler impact rule"

ORIGINAL COMMENTS:

Add or remove an index partition

<http://technet.microsoft.com/en-us/library/ee805955.aspx>

QUESTION 20

You have a SharePoint Server 2010 server farm. Every night, you perform a full backup of the farm and a backup of all the SharePoint databases. You are planning the recovery strategy for the Secure Store Service.

You need to identify which information is required to recover the Secure Store Service. What should you

identify?

- A. The Secure Store Service passphrase
- B. The Secure Store Service application pool identity
- C. The farm passphrase
- D. The Central Administration application pool identity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q020

BURGOS MNEMO: = "Secure Store Service **passphrase**"

BURGOS COMMENTS:

About "Central Administration" in Q020, Q026, Q123:

IF "backup requirement" THEN "Central Administration"

ELSE other

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")

ELSE no.

ORIGINAL COMMENTS:

Configure the Secure Store Service

<http://technet.microsoft.com/en-us/library/ee806866.aspx>

QUESTION 21

You have a SharePoint Server 2010 server farm. You create a Web Part page that contains a custom Web Part for the finance department. You need to ensure that only users in the finance department can access the finance Web Part. All other users must have access to the Web Part page.

What should you implement?

- A. Variations
- B. User policies
- C. Organization profiles
- D. Audiences

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q021

BURGOS MNEMO: "Web Part (to an especific department)" = "Audiences"

BURGOS COMMENTS:

About "Audiences" in Q017, Q021, Q125:

IF "WebParts may be visible to an specific department" THEN "Audiences"

ELSE no

ORIGINAL COMMENTS:

When using web parts that should only be visible to certain users or groups, you should use audiences.

QUESTION 22

You are load testing a SharePoint Server 2010 server farm. You need to simulate 30,000 concurrent user

connections. Which tool should you use?

- A. SQL Server Profiler
- B. Microsoft Visual Studio 2008
- C. Microsoft SQL Server Management Studio
- D. Internet Information Services (IIS) Manager

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q022

BURGOS MNEMO: = "Microsoft **Visual Studio** 2008"

ORIGINAL COMMENTS:

Visual Studio 2008 is the only tool of the ones mentioned that can perform such an action by using the Visual Studio 2008 Load Testing capabilities available through Visual Studio 2008 Team Suite edition.

QUESTION 23

You have a Microsoft Office SharePoint Server 2007 server farm. The farm contains the servers configured as shown in the following table.

Server name	Server component	Server operating system
Server1	SharePoint Server 2007	Windows Server 2008 (64-bit)
Server2	Microsoft SQL Server 2008	Windows Server 2008 R2 (64-bit)

You need to recommend a solution to migrate to SharePoint Server 2010. Your solution must meet the following requirements:

- Prevent the need for additional hardware.
- Minimize downtime.

What should you recommend?

- A. An in-place upgrade
- B. Alternate access mappings
- C. A database attach upgrade
- D. A backup and restore

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q023

BURGOS MNEMO: "Minimize downtime" = "in-place upgrade"

BURGOS COMMENTS:

About "in-place upgrade" in Q023, Q057, Q085:

IF IN EXHIBIT "does not use Excel Services (and others)" and require "minimal admin effort",
THEN "attach",
ELSE "in-place".

QUESTION 24

You have a SharePoint Server 2010 server farm. The farm contains the servers configured as shown in the following table.

Server name	Server role
Server1	Web
Server2	Web, query, crawl
Server3	Database

You need to ensure that Server2 never crawls SharePoint content through Server1. What should you create?

- A. An entry in the Hosts file
- B. An alternate access mapping
- C. A crawl database
- D. A crawl component

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q024

BURGOS MNEMO: = "**Hosts** file"

BURGOS COMMENTS:

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

QUESTION 25

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to simplify the management of RFPs and related documents. What should you recommend?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

- A. The Record Center site template
- B. Content deployment paths
- C. An information management policy
- D. A custom Document Set content type

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q025

BURGOS MNEMO: = "custom **Document Set**"

BURGOS COMMENTS:

QUESTION 26

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan a backup strategy for the server farm. Your solution must minimize costs. What should you include in the backup strategy?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

- A. Windows Backup
- B. The backup-spfarm cmdlet and Task Scheduler
- C. Microsoft Systems Center Data Protection Manager
- D. Backups from Central Administration

QUESTION 27

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

A. Four Web servers and four Microsoft SQL Server servers

- B. Four Web servers and two Microsoft SQL Server servers
- C. Two Web servers and two Microsoft SQL Server servers
- D. Two Web servers and one Microsoft SQL Server server

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q027

BURGOS MNEMO: = "**Four Web servers** and four SQL"

ORIGINAL COMMENTS:

Since Administrators need to backup and restore each site separately and there are four different office (Paris, New York, Tokyo and Toronto), 4 Web servers and 4 SQL Servers are required.

QUESTION 28

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to minimize the effort required to publish content from the intranet to the public Web site. What should you include in the solution?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.

QUESTION 29

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to ensure that ProjectSite.wsp is the only template used to create collaboration sites. What should you do?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

A. Modify the Subsite Template settings for the collaboration environment.

- B. Deactivate the SharePoint Server Publishing feature.
- C. Deploy ProjectSite.wsp to the root site collection.
- D. Rename ProjectSite.wsp as Default.wsp.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q029

BURGOS MNEMO: = "Subsite Template"

QUESTION 30

You are a SharePoint administrator for Fabrikam, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to manage the taxonomy. You must achieve this goal by using the minimum amount of administrative effort. What should you include in the solution?

Exhibit:

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP.
- These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese.
- The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Plan for multilingual sites

<http://technet.microsoft.com/en-us/library/cc262055.aspx>

QUESTION 32

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend changes to Server3 to support the SharePoint Server 2010 deployment. Your solution must minimize costs. What should you recommend?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Install Microsoft SQL Server 2000 Data Transformation Services (DTS) on Server3.
- B. Upgrade the SQL server on Server3 to Microsoft SQL Server 2005.
- C. Upgrade Server3 to Windows Server 2003 R2 (64-bit).
- D. Upgrade Server3 to Windows Server 2008 (64-bit).

Correct Answer: B

Section: (none)
Explanation

Explanation/Reference:

Q032

BURGOS MNEMO: (if you have SQL2000) = **Upgrade SQL to 2005**

ORIGINAL COMMENTS:

Database requirement for SharePoint 2010 is SQL2k5 SP3 or SQL2k8, Server3 have WinServer2k3 .
only update to SQL2k5.

Hardware and software requirements

<http://technet.microsoft.com/en-us/library/cc262485.aspx#section3>

QUESTION 33

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend an authentication method for the planned SharePoint Server 2010 deployment that meets the company's security requirements. Which authentication method should you recommend?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Digest authentication
- B. Claims-based authentication
- C. Certificate-based authentication
- D. Basic authentication

Correct Answer: B

Section: (none)
Explanation

Explanation/Reference:

Q033

BURGOS MNEMO: = "**Claims-based authentication**"

ORIGINAL COMMENTS:

Since the deployment must support all branch office users and changes cannot be made to the client computers, certificate-based authentication is not possible. Since the authentication must also use a cryptographic exchange, this eliminates Basic authentication. Therefore, the only remaining answer choice is **Claims-based authentication**.

QUESTION 34

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design a search solution to meet the company's user requirements. Your solution must minimize costs. What should you include in the design?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Two servers that have the Web Server role installed, two servers that have the query component installed, and two servers that have the crawl component installed
- B. Two servers that have the Web Server role and crawl component installed and two servers that have the query component installed
- C. Two servers that have the Web Server role and query component installed, and two servers that have the crawl component installed

D. Two servers that have the Web Server role, query component, and crawl component installed

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q034

BURGOS MNEMO: "minimize cost" = only 2 servers with all tree parts.

BURGOS COMMENTS:

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

OTHERWISE, crawl component (see that in this case, "components" appear in plural).

--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

Two front-end server for main office and brand with all role (web, query, crawl).

QUESTION 35

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to manage the company's pricing information that meets the company's technical requirements. What should you include in the solution?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Term Store Management
- B. Site library and lists
- C. Site collection policies
- D. A SharePoint Recycle Bin

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

You need to recommend a solution to manage the site collections that meets your company's requirements. What should you include in the recommendations?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Site use confirmation and deletion
- B. An information management policy
- C. A Web Application user policy
- D. A Web Application permission policy

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q036

BURGOS MNEMO: = "Site **use confirmation** and deletion"

BURGOS COMMENTS:

About "Information management policies" in Q001, Q017, Q025, Q036, Q090, Q098, Q105:

IF HAVE "Web Analytics" OR "UPS" OR "Document Set" OR "use confirmation" OR "document library" OR "PerformancePoint" THEN is this,

OTHERWISE "Information management policies"

ORIGINAL COMMENTS:

Site Use Confirmation and Automatic Deletion: Stsadm properties

QUESTION 37

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a server upgrade strategy that meets the company's requirements. Your solution must minimize costs. What should you recommend?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- Replace the servers that run SharePoint Server 2007 to servers that have IA64 hardware. Install Windows Server 2003 (64-bit).
- Replace the servers that run SharePoint Server 2007 to servers that have x64 hardware. Install Windows Server 2003 (64-bit).
- Replace the servers that run SharePoint Server 2007 to servers that have IA64 hardware. Install Windows Server 2008 (64-bit).

D. Replace the servers that run SharePoint Server 2007 to servers that have x64 hardware. Install Windows Server 2008 (64-bit).

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q037

BURGOS MNEMO: = "x64 ... Win2008"

ORIGINAL COMMENTS:

SharePoint 2010 does not support Windows Server 2003--only Windows Server 2008 and above. X64 hardware is cheaper than IA64 based hardware.

Hardware and software requirements

<http://technet.microsoft.com/en-us/library/cc262485.aspx#section3>

QUESTION 38

You are a SharePoint administrator for A. Datum Corporation. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to delegate site creation. Your solution must meet the company's security requirements. What should you include in the solution?

Exhibit:

The company has a main office and a branch office. The company has 2,000 users.

Current Environment

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained. Every 120 days, site collection administrators must confirm that their site collections are still in use.

If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:

- Users must be assigned the most restrictive permissions possible.
- The deployment must support authentication for all branch office users.
- Support for the branch office users must not require changes to the client computers.
- All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to create sites without any help from an administrator.
- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

- A. Site collection administrators permissions
- B. Self-service site creation
- C. Designer permissions
- D. Farm administrators permissions

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q038

BURGOS MNEMO: "**delegate site creation**" = "Self-Service"

BURGOS COMMENTS:

About "Self-Service" in Q038, Q094:

IF HAVE "extranet content DB"

THEN is this correct,

ELSE "Self-Service".

ORIGINAL COMMENTS:

Users must be able to create sites without any help from an administrator . Self-service.

QUESTION 39

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to ensure that users can receive search results for all content in the organization if a single server fails. What should you do?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Create multiple server name mappings.
- B. Implement query component mirroring.
- C. Implement host distribution rules.
- D. Add a new crawl component.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q039

BURGOS MNEMO: "query component mirroring"

BURGOS COMMENTS:

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

OTHERWISE, crawl component (see that in this case, "components" appear in plural).

--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

Add or remove a query component

<http://technet.microsoft.com/en-us/library/ff428118.aspx>

QUESTION 40

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to migrate all documents from the partner company to SharePoint- Farm. What should you include in the solution?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Site Collection policies
- B. Read-only databases
- C. Offline databases
- D. Information Rights Management (IRM)

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q040

BURGOS MNEMO: = "Read-only DB"

BURGOS COMMENTS:

About "Site collection policy(ies)" in Q035, Q040, Q067, Q094:

IF HAVE "SharePoint Recycle Bin"

THEN "collection policies"

ELSE other.

ORIGINAL COMMENTS:

All migrated documents must be read-only. Therefore **read-only databases** must be used.

QUESTION 41

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution that meets the company's monitoring requirements. What should you recommend?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Web Analytics reports
- B. SharePoint Health Analyzer
- C. Internet Information Services (IIS) logs
- D. Administrative reports

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q041

BURGOS MNEMO: "query latency" in exhibit" = "**Administrative reports**"

BURGOS COMMENTS:

About "Web Analytics" in Q001, Q041:

IF exhibit talks about "query latency" THEN "Admin reports"

ELSE "Web Analytics"

About "Health Analyzer" in Q041, Q049, Q066:

IF HAVE "Administrative reports" THEN is this

ELSE "Health Analyzer"

ORIGINAL COMMENTS:

Use search administration reports

<http://technet.microsoft.com/en-us/library/ee808861.aspx>

QUESTION 42

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You migrate all of the documents from the partner company to a new Web application. You configure the Web application to use Forms-based authentication. You discover that search results exclude the migrated documents. The search results include all other documents. You need to ensure that the search results include all of the migrated documents. What should you create?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. A search scope
- B. A host distribution rule
- C. A crawler impact rule
- D. A crawl rule

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q042

BURGOS MNEMO: = "crawl rule"

BURGOS COMMENTS:

About "crawl rule" and "crawler impact rule" in Q019, Q042, Q051, Q072:

IF HAVE "Index partition" OR "Authoritative pages" THEN is this,
ELSE IF "include all of the migrated documents" THEN "crawl rule"
ELSE IF "minimize the amount of resources" THEN "crawler impact rule"

ORIGINAL COMMENTS:

Manage crawl rules

<http://technet.microsoft.com/en-us/library/ee792871.aspx>

QUESTION 43

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of Hyper-V servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. 4
- B. 3
- C. 2
- D. 1

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q043

BURGOS MNEMO: "number of **H**yper-**V** servers" = "2"

ORIGINAL COMMENTS:

If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization. . 2 hyper-V server for 2 WFE role.

QUESTION 44

You are a SharePoint administrator for Wide World Importers. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to ensure that new content added to the SharePoint sites is included in all search results within 30 minutes of being added. What should you include in the solution?

Exhibit:

The company uses Windows Server 2008 Hyper-V for server virtualization. The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection. You plan to implement SharePoint Server 2010.

Planned Server Configuration As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm.

You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint-Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Property databases
- B. Index partitions

- C. Crawl databases
- D. Crawl components

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q044

BURGOS MNEMO: = "**Crawl components**"

About Q044 and Q096: they are different, but they have the same choices and the same answer.

About "Index Partition" in Q019, Q044, Q096:

IF "distributed across web servers" THEN "Index Partition"

ELSE no.

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

OTHERWISE, crawl component (see that in this case, "components" appear in plural).

--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

Add or remove a crawl component

<http://technet.microsoft.com/en-us/library/ee805950.aspx>

QUESTION 45

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design an authentication solution to provide users with access to the SharePoint sites from the Internet. What should you include in the solution?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. The Secure Store Service application
- B. The Access Services service application
- C. Active Directory Rights Management Services (AD RMS)
- D. Active Directory Certificate Services (AD CS)

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q045

BURGOS MNEMONIC: = "Active Directory **Certificate Services** (AD CS)"

BURGOS COMMENTS:

About "AD RMS" in Q045, Q048, Q064, Q092, Q116

IF HAVE "AD CS" OR "UPS" OR "AD LDS" OR "Recycle Bin" THEN is this

ELSE "AD RMS"

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")

ELSE no.

ORIGINAL COMMENTS:

Since SharePoint sites exposed on the Internet should be secured over SSL, **Active Directory Certificate Services (AD CS)** should be used.

QUESTION 46

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a data recovery strategy that meets the company's compliance requirements. The strategy must use the minimum amount of administrative effort. What should you include in the strategy?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. SharePoint Recycle Bin
- B. SharePoint granular backups
- C. Microsoft SQL Server differential backups
- D. Microsoft SQL Server database snapshots

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q046

BURGOS MNEMO: "minimal amount of administrative effort" = "SharePoint Recycle Bin"

BURGOS COMMENTS:

About "granular backup" in Q046, Q056, Q107, Q112:

IF HAVE IN SAME CHOICE "SharePoint farm" OR "Scheduled"

THEN is this

ELSE no.

About "SharePoint Recycle Bin" in Q035, Q046, Q116:

IF HAVE "collection policies"

THEN "collection policies"

ELSE "SharePoint Recycle Bin".

ORIGINAL COMMENTS:

Since Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as 2 years, the only way to ensure that the users can directly restore this content is to implement the **SharePoint Recycle Bin**.

Plan to protect content by using recycle bins and versioning

<http://technet.microsoft.com/en-us/library/cc263011.aspx#Section1>

QUESTION 47

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You are evaluating whether to implement a single server farm for the SharePoint Server 2010 deployment. You need to identify the minimum number of zones required for the single server farm.

How many zones should you identify?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. 6
- B. 4
- C. 2
- D. 1

Correct Answer: C

QUESTION 48

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution that meets the company's compliance requirements. What should you include in the solution?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. Windows Server 2008 Security Compliance Management Toolkit
- B. Microsoft Systems Center Operations Manager
- C. Active Directory Rights Management Services (AD RMS)
- D. Active Directory Federation Services (AD FS)

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

ELSE other

ORIGINAL COMMENTS:

"Users must not be able to print confidential documents that are stored in SharePoint sites". Rights Management Services (RMS)

QUESTION 49

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a monitoring solution for the planned deployment of SharePoint Server 2010. Your solution must minimize costs. Which solution should you recommend?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. SharePoint Health Analyzer
- B. PerformancePoint Services
- C. Performance Monitor
- D. Microsoft Systems Center Configuration Manager

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q049

BURGOS MNEMO: = "Health Analyzer"

BURGOS COMMENTS:

QUESTION 52

You are a SharePoint administrator for Trey Research. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design a maintenance strategy that meets the company's business continuity requirements. What should you include in the strategy?

Exhibit:

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

The Current Environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts. SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Separate site collections
- B. Sandboxed solutions
- C. An additional Web server
- D. A separate server farm

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q052

BURGOS MNEMO: = "A **separate server farm**"

BURGOS COMMENTS:

About "Sandboxed" in Q009, Q052, Q061, Q101:

IF HAVE "separate server farm" (Trey researchs) THEN is this
ELSE "Sandboxed".

QUESTION 53

You are a SharePoint administrator for Trey Research. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan a search strategy that meets the company's user requirements. What should include in the strategy?

Exhibit:

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

The Current Environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts. SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Search scopes
- B. Dedicated crawl servers
- C. Additional crawl databases
- D. A federated search

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q053

BURGOS MNEMO: = "A **federated search**"

Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Windows Network Load Balancing
- B. SQL Server log shipping
- C. Hardware load balancing
- D. Failover clustering

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q058

BURGOS MNEMO: "if a single database server fails" = "Failover clustering"

BURGOS COMMENTS:

About "NLB" in Q009, Q014, Q058:

IF "distributed across" only THEN Sandboxed
IF cluster solution for Web THEN "NLB",
IF for SQL THEN Failover Cluster

ORIGINAL COMMENTS:

Failover clustering is the only solution that can be used by SQL Server databases to ensure accessibility after a single database server fails.

QUESTION 59

You are a SharePoint administrator for Northwind Traders. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of content databases required for the planned SharePoint Server 2010 deployment. How many content databases should you identify?

Exhibit:

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. 50
- B. 11
- C. 5
- D. 1

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q059

BURGOS MNEMO: "number content database" = "50" (more than 20)

BURGOS COMMENTS:

About Numeric Questions Q003, Q047, Q059, Q080, Q086, Q088, Q089, Q110, Q118:

ORIGINAL COMMENTS:

"must support as much as 5 terabytes of content" . $5000/100=50$ DB

QUESTION 60

You are a SharePoint administrator for Northwind Traders. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a strategy to manage access to SharePoint content. You must achieve this goal by using the minimum amount of administrative effort. What should you recommend?

Exhibit:

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. Implement Active Directory Lightweight Directory Services (AD LDS).
- B. Create user policies and permission policies for the Web application.
- C. Add Active Directory groups to the SharePoint groups.
- D. Configure managed accounts.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q060

BURGOS MNEMO: = "Add Active Directory groups to the SharePoint groups"

BURGOS COMMENTS:

About "AD LDS" in Q007, Q060, Q092

QUESTION 61

You are a SharePoint administrator for Northwind Traders. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a deployment solution for the customizations that meets the company's user requirements. What should you include in the solution?

Exhibit:

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. Sandboxed solutions
- B. Farm solutions
- C. Farm features
- D. Content deployment

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q061

BURGOS MNEMO: = "Farm features"

BURGOS COMMENTS:

About "Sandboxed" in Q009, Q052, Q061, Q101:

IF HAVE "separate server farm" (Trey researchs) THEN is this

ELSE "Sandboxed".

About "content deployment" in Q011, Q025, Q028, Q031, Q055, Q056, Q061, Q081, Q104, Q114:

IF APPEARS WITH "quick deploy" in same choice OR HAVE "Log Shipping" in other choice THEN "Content deployment",

OTHERWISE, no.

I changed this question with @PTuser cos he take 1000/1000, but another comments didn't agree (neither disagree) with @PTuser.

ORIGINAL COMMENTS:

Based on the User Requirements

All customizations must be authored by a single team of developers

All customizations must be deployed by the site collection administrators

There is no need to grant additional development groups the ability to deploy their own custom solutions, therefore, sandboxed solutions are not required.

Since all of the content is being centrally managed, the easiest method to allow site collection administrators to individually deploy the required features is to utilize **Farm features**.

QUESTION 62

You are a SharePoint administrator for Northwind Traders. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution for creating the custom workflows. What should you include in the solution?

Exhibit:

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. The out-of-box SharePoint workflows
- B. Microsoft Visio 2010
- C. Microsoft SharePoint Designer 2010
- D. Microsoft InfoPath Designer 2010

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q062

BURGOS MNEMO: "**custom workflows**" = "SharePoint Designer"

BURGOS COMMENTS:

About "SharePoint Designer" in Q062, Q078, Q099, Q104:

IF "PerformancePoint" OR "WAS" OR "SharePoint solution" THEN is this

ELSE "SharePoint Designer"

ORIGINAL COMMENTS:

Custom workflows can only be published either through SharePoint Designer 2010 or Visual Studio 2010. Visio 2010 can only be used to design custom workflows, however, they must still be imported into SharePoint Designer 2010 in order to be published to the site. Therefore, the correct answer is **Microsoft SharePoint Designer 2010**.

QUESTION 63

You are a SharePoint administrator for Northwind Traders. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a search solution that meets the company's business requirements. What should you include in the solution?

Exhibit:

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. Search scopes
- B. Host distribution rules
- C. Federated locations
- D. Authoritative pages

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q63

BURGOS MNEMO: = "Authoritative pages" (if not have "Managed properties")

BURGOS COMMENTS:

About "Authoritative pages" in Q063, Q072, Q076, Q115:

IF HAVE "Managed Properties" THEN is this

ELSE "Authoritative pages"

ORIGINAL COMMENTS:

Since one of the business requirements is that Human resources content must always have the highest relevancy in search results, **authoritative pages** must be used.

Configure authoritative Web pages

QUESTION 65

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a search solution that meets the company's user requirements. You must minimize the amount of effort required to administer a search. What should you include in the solution?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Two query servers
Two crawl servers
Two index partitions
One mirrored property database
One mirrored crawl database
- B. Two query servers

- Two crawl servers
- One mirrored index partition
- Two property databases
- Two crawl databases
- C. Two query servers
 - Two crawl servers
 - One mirrored index partition
 - One mirrored property database
 - One mirrored crawl database
- D. Two query servers
 - One crawl server
 - One mirrored index partition
 - Two property databases
 - One crawl database

Correct Answer: B

Section: (none)

Explanation

Q065

BURGOS MNEMO: = "2/2/1/2/2"

QUESTION 66

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a monitoring solution that meets the company's technical requirements. What should you include in the recommendations?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Usage logging
- B. Microsoft Systems Center Operations Manager
- C. Health Analyzer rule definitions
- D. Diagnostic logging

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q066

BURGOS MNEMO: = "Health Analyzer"

BURGOS COMMENTS:

About "Health Analyzer" in Q041, Q049, Q066:

IF HAVE "Administrative reports" THEN is this

QUESTION 67

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan a solution that meets the company's taxonomy requirements. You must ensure that the taxonomy for the legal documents is isolated. What should you include in the solution?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Multiple Site Collection policies
- B. Multiple Managed Metadata Service applications
- C. A Web application zone
- D. A Legal site collection

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q067

BURGOS MNEMO: "**Taxonomy**" = "Managed Metadata Service"

BURGOS COMMENTS:

About "Site collection policy(ies)" in Q035, Q040, Q067, Q094:

IF HAVE "SharePoint Recycle Bin"

THEN "collection policies"

ELSE other.

About "MMS" in Q015, Q030, Q055, Q067, Q070:

IF "Taxonomy" or "Reserarch department": THEN "MMS".

IF HAVE "create custom audiences" THEN is this instead of "MMS".

PS: I know that "Reserarch department" is weak mnemo, sorry!

QUESTION 68

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

<http://www.gratisexam.com/>

You need to recommend which SharePoint Server 2010 feature meets the technical requirements of the distribution centers. Which feature should you recommend?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. The Publishing Infrastructure
- B. The enterprise site collection features
- C. The Content Type Syndication Hub
- D. The Application Registry Service

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q068

BURGOS MNEMO: "= "The **Publishing Infrastructure**"

ORIGINAL COMMENTS:

Work with pages in a publishing site

<http://office.microsoft.com/en-us/sharepoint-server-help/work-with-pages-in-a-publishing-site-HA010099663.aspx?CTT=3>

QUESTION 69

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to ensure that you can upgrade to SharePoint Server 2010. What should you do?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. On Server5, upgrade from SQL Server 2005 to SQL Server 2008.
- B. On Server1 and Server2, upgrade to Windows Server 2008.
- C. On Server5, upgrade to Windows Server 2008.
- D. On Server3, uninstall SharePoint Server 2007.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q069

BURGOS MNEMO: "upgrade to SharePoint Server 2010" = "**upgrade to Windows** Server 2008" (Web Servers)

BURGOS COMMENTS:

@Junkie put D, but the correct is B according @GiGi, @Heady, @Dizzlin, @msamy508, @Offspring, After, @vs2010junkie agree.

About choice A: "On the database back end, SharePoint 2010 requires SQL Server 2005 with SP2 or later or SQL Server 2008. SQL must be 64-bit also." (by @Madri in my dump 70-667).

QUESTION 70

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify which service applications are required to implement the company's taxonomy. The minimum number of service applications must be identified. Which service applications should you identify?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. Four Search Service Applications
- B. Four Managed Metadata Services
- C. Three Search Service Applications
- D. Three Managed Metadata Services

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q070

BURGOS MNEMO: "**T**axonomy" = "**T**hree **M**anaged **M**etadata **S**ervice" (remember: TREE)

BURGOS COMMENTS:

About "MMS" in Q015, Q030, Q055, Q067, Q070: "Taxonomy" or "Research department": always "Managed Metadata Services". Only if have "create custom audiences" is this instead of "MMS".

PS: I know that "Research department" is weak mnemonic, sorry!

QUESTION 71

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design an authentication solution that meets the company's business requirements. What should you include in the design?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. The Secure Store Service
- B. The Data Retrieval Service
- C. SQL Server authentication
- D. Active Directory Federation Services (AD FS)

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q071

BURGOS MNEMO: "authentication solution ...business requirement " = "Secure Store Service"

BURGOS COMMENTS:

Exhibit talks about Taxonomy, but between choices we have no Managed Metadata Services, so, I choose Secure Store Service because security requirements.

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")

ELSE no.

ORIGINAL COMMENTS:

Plan the Secure Store Service

<http://technet.microsoft.com/en-us/library/ee806889.aspx>

QUESTION 72

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to rank the search results that meets the company's requirements.

What should you include in the solution?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. Search scopes
- B. Host distribution rules
- C. Crawl rules
- D. Authoritative pages

Correct Answer: D
Section: (none)

Explanation

Explanation/Reference:

Q72

BURGOS MNEMO: = "Authoritative pages" (if not have "Managed properties")

BURGOS COMMENTS:

About "Authoritative pages" in Q063, Q072, Q076, Q115:

IF HAVE "Managed Properties" THEN is this

ELSE "Authoritative pages"

About "crawl rule" and "crawler impact rule" in Q019, Q042, Q051, Q072:

IF HAVE "Index partition" OR "Authoritative pages" THEN is this,

ELSE IF "include all of the migrated documents" THEN "crawl rule"

ELSE IF "minimize the amount of resources" THEN "crawler impact rule"

ORIGINAL COMMENTS:

Configure authoritative Web pages

<http://technet.microsoft.com/en-us/library/cc262796.aspx>

QUESTION 73

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan the search topology for the Web site. What should you implement?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. A query component on Server2 and a crawl component on Server1
- B. A query component on Server1 and a crawl component on Server2
- C. A query component on Server1 and Server2
- D. A crawl component on Server1 and Server2

Correct Answer: B
Section: (none)

Explanation

Explanation/Reference:

Q073

BURGOS MNEMO: "Server1 = user searches, Server2 = index" (from exhibit) = "Server1 = Query, Server2 = crawl"

BURGOS COMMENTS:

About "crawl component" in Q005, Q024, Q039, Q044, Q096: IF mirror EXISTS THEN mirror is correct, IF hosts EXISTS, THEN hosts, OTHERWISE, crawl (see that in this case, "components" appear in plural). Q034 and Q073 just say about crawl, but it is not focus of choice.

QUESTION 74

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

The company's security team reports that the firewall has too many open ports. You need to identify the port or ports required by SharePoint to access Server4. Which port or ports should you identify?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. TCP port 1521
- B. TCP port 1433
- C. TCP port 445 and TCP port 636
- D. TCP port 135 and UDP port 135

Correct Answer: B
Section: (none)

Explanation

Explanation/Reference:

Q074

BURGOS MNEMO: "SQL port" = "1433"

ORIGINAL COMMENTS:

By default, SQL Server uses port 1433 for database access.

QUESTION 75

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution that provides customers with access to the company's pricing information. What should you include in the solution?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. HTTP over SSL and Windows authentication
- B. HTTP over SSL and Forms-based authentication
- C. HTTP and Windows authentication
- D. HTTP and Forms-based authentication

Correct Answer: B
Section: (none)

Explanation

Explanation/Reference:

Q075

BURGOS MNEMO: = "**HTTP** over SSL and Forms-based authentication"

ORIGINAL COMMENTS:

Since there is no evidence that customers will be stored in either an Active Directory or LDAP repository, the only external authentication solution that would be viable for them would be **Forms-based authentication**.

Since all externally available sites should be secured via SSL, this leads to the answer choice **HTTP over SSL and Forms-based authentication**.

QUESTION 76

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to filter the search results based on product category. What should you include in the solution?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. Managed properties
- B. Host distribution rules
- C. Content sources
- D. Authoritative pages

Correct Answer: A
Section: (none)

Explanation

Explanation/Reference:

Q076

BURGOS MNEMO: = "**Managed properties**"

BURGOS COMMENTS:

About "Authoritative pages" in Q063, Q072, Q076, Q115:

IF HAVE "Managed Properties" THEN is this

ELSE "Authoritative pages"

ORIGINAL COMMENTS:

QUESTION 78

You are a SharePoint administrator for Blue Yonder Airlines. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend a solution for migrating all PerformancePoint 2007 objects to SharePoint Server 2010. What should you include in the solution?

Exhibit:

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements

For Upgrade Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

Users must be able to access all documents during the upgrade process.

- A. The Import PerformancePoint Server 2007 Content wizard
- B. PerformancePoint Dashboard Designer
- C. The Import Application Definition File wizard
- D. SharePoint Designer 2010

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q078

BURGOS MNEMO: = "Import PerformancePoint"

QUESTION 79

You are a SharePoint administrator for Blue Yonder Airlines. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend an authentication method for the Web applications in the SharePoint Server 2010 farm that meets the company's security requirements. Which authentication method should you recommend?

Exhibit:

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements

For Upgrade Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

Users must be able to access all documents during the upgrade process.

- A. NTLM
- B. Kerberos
- C. Claims
- D. Basic

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q079

BURGOS MNEMO: "multiple authentication providers in a single zone" (exhibit) = "Claims"

BURGOS COMMENTS:

About pair Q079, Q095:

Q079: "Claims" exhibit asks for "multiple authentication providers in a single zone"

Q124: "Kerberos" exhibit asks for "unauthenticated access across internet

ORIGINAL COMMENTS:

In order to meet the company's security requirement of supporting multiple authentication providers in a single zone, **Claims** based authentication must be used.

QUESTION 80

You are a SharePoint administrator for Blue Yonder Airlines. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You are evaluating whether to implement an in-place upgrade to SharePoint Server 2010. You need to identify how many index partitions will be created during the in-place upgrade. How many index partitions will be created?

Exhibit:

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

ELSE > "20" ("40" OR "50") IF "number of content databases" (Q059, Q088)

QUESTION 81

You are a SharePoint administrator for Blue Yonder Airlines. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend a strategy to migrate all SharePoint Server 2007 content to SharePoint Server 2010. What should you include in the recommendations?

Exhibit:

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements

For Upgrade Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

Users must be able to access all documents during the upgrade process.

- A. The document conversions services
- B. Microsoft Internet Information Services (IIS) Migration Tool
- C. Content deployment paths
- D. Alternate access mapping URL redirection

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q081

BURGOS MNEMO: = "URL redirection"

BURGOS COMMENTS:

About "content deployment" in Q011, Q025, Q028, Q031, Q055, Q056, Q061, Q081, Q104, Q114:

IF APPEARS WITH "quick deploy" in same choice OR HAVE "Log Shipping" in other choice THEN "Content

deployment",
OTHERWISE, no.

ORIGINAL COMMENTS:

Since the users must be able to access the upgraded and non-upgraded sites during the upgrade process, Alternate access mappings must be utilized.

How Do I: Configure an Alternate Access Mapping in SharePoint 2010

<http://technet.microsoft.com/en-us/sharepoint/ff679917.aspx>

QUESTION 82

You are a SharePoint administrator for Blue Yonder Airlines. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to increase the available disk space on Server1 and Server2 before you upgrade the farm. What should you do?

Exhibit:

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

Users must be able to access all documents during the upgrade process.

- A. Activate the Content Organizer on all of the site collections.
- B. Reset the indexes and perform a full crawl.
- C. Take all of the content databases offline.
- D. Shrink the content database files.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q082

BURGOS MNEMO: = "Reset the indexes and perform a full crawl"

BURGOS COMMENTS:

About "Shrink" in Q082 and Q119:

IF HAVE "full crawl THEN is THIS

ELSE "Shrink"

QUESTION 83

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a database solution that meets the company's technical requirements. Which database solution should you recommend?

Exhibit:

Current Environment

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

All users must authenticate to the SharePoint server farm by using smart cards.

- A. Snapshots
- B. Partitioning
- C. Mirroring
- D. Encryption

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q083

BURGOS MNEMO: "database solution" = "Mirroring" (if just a single word)

ORIGINAL COMMENTS:

Since the company has 40 offices, the only high availability option amongst the answer choices is **Mirroring**.

Database Mirroring Overview

<http://msdn.microsoft.com/en-us/library/ms189852.aspx>

QUESTION 84

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You are testing smart card authentication for all sites. You discover that SharePoint content is not being indexed. You need to ensure that all SharePoint content is indexed. Your solution must meet the company's security requirements. What should you do?

Exhibit:

Current Environment

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

All users must authenticate to the SharePoint server farm by using smart cards.

- A. Create an alternate access mapping. Modify the permissions policy and the authentication provider.
- B. Create a server name mapping and a content source. Modify the permissions policy.
- C. Create an additional zone, a server name mapping, and a content source.
- D. Create an additional zone. Modify the authentication provider.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q084

BURGOS MNEMO: = "additional zone" (with "server name mapping" and "content source")

QUESTION 85

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a migration solution for Excel Services. Which solution should you recommend?

Exhibit:**Current Environment**

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

All users must authenticate to the SharePoint server farm by using smart cards.

- A. Export and import all lists that contain Microsoft Office Excel files.
- B. Back up and restore the Shared Services Provider.
- C. Perform a database attach upgrade.
- D. Perform an in-place upgrade.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q085

BURGOS MNEMO: "SLA without affect another site" (in exhibit) = "in-place upgrade"

BURGOS COMMENTS:

About "in-place upgrade" in Q023, Q057, Q085:

IF IN EXHIBIT "does not use Excel Services (and others)" and require "minimal admin effort",
THEN "attach",
ELSE "in-place".

QUESTION 86

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

Exhibit:

Current Environment

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

THEN = "5" IF "number of site collection 3+2" (Q003)

THEN = "13" IF "number of site collection 10+1+1+1" (Q089)

ELSE > "20" ("40" OR "50") IF "number of content databases" (Q059, Q088)

QUESTION 87

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to implement an authentication solution that meets the company's security requirements. What should you do?

Exhibit:

Current Environment

Smart cards are deployed in the organization. The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2. The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

All users must authenticate to the SharePoint server farm by using smart cards.

- A. Create a new Web application zone and create an auto-enrollment policy for certificates.
- B. Create a new Web application zone and create a new ISAPI filter.
- C. Enable SSL and configure certificate mapping.
- D. Enable SSL and create a new ISAPI filter.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q087

BURGOS MNEMO: = "**Enable SSL** and configure certificate mapping"

ORIGINAL COMMENTS:

Since all users must authenticate to the SharePoint Server Farm by using smart cards, the only possible valid answer choice is **Enable SSL and configure certificate mapping**.

QUESTION 88

QUESTION 89

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of site collections required for the planned deployment of SharePoint Server 2010. How many site collections should you identify?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. 13
- B. 10
- C. 3

D. 1

Correct Answer: A

Section: (none)

QUESTION 91

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

During capacity testing, you discover that InfoPath user sessions are forcibly terminated, resulting in the loss of form data. You need to recommend a solution to support the required number of connections for InfoPath Forms Services. What should you recommend?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Distribute InfoPath forms in multiple form libraries.
- B. Create a new Secure Store Service application.
- C. Configure page output caching.
- D. Add a State Service database.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q091

BURGOS MNEMO: = "State Service database"

BURGOS COMMENTS:

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")
ELSE no.

ORIGINAL COMMENTS:

Manage the State Service

<http://technet.microsoft.com/en-us/library/ee704548.aspx>

QUESTION 92

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to grant partner company employees access to the extranet. What should you include in the solution?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Integrated Windows authentication and Active Directory Rights Management Services (AD RMS)
- B. Integrated Windows authentication and Active Directory Federation Services (AD FS)
- C. Forms-based authentication and the Application Layer Gateway Service (ALG)
- D. Forms-based authentication and Active Directory Lightweight Directory Services (AD LDS)

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q092

BURGOS MNEMO: "grant partner company employees access to the extranet" = "AD LDS"

BURGOS COMMENTS:

About "AD RMS" in Q045, Q048, Q064, Q092, Q116

IF HAVE "AD CS" OR "UPS" OR "AD LDS" OR "Recycle Bin" THEN is this
ELSE "AD RMS"

About "AD LDS" in Q007, Q060, Q092

IF OTHER COICES ("AD RMS", "AD FS", "ALG") THEN is "AD LDS"
ELSE other

ORIGINAL COMMENTS:

Since partner company employees must not have access to the Contoso Active Directory forest, a separate authentication repository must be created for them. In this case, the only valid option is **Active Directory Lightweight Directory Services (AD LDS)**.

QUESTION 93

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You are evaluating whether to implement a single server farm that will contain the extranet Web site, the intranet Web site, and the public Website. You need to prevent partner company users from creating My Sites. What should you do?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Delete the users from all of the SharePoint groups in the My Sites host application.
- B. Disassociate the extranet application from the default user profile proxy.
- C. Store the User Profile database inside the perimeter network.
- D. Disable the User Profile Service.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q093

BURGOS MNEMO: = "Disassociate the extranet"

BURGOS COMMENTS:

About "UPS" in Q015, Q017, Q064, Q077, Q093:

IF HAVE TOGETHER ("BCS" and "SSS") OR HAVE "Disassociate the extranet" THEN is this
ELSE "UPS" (with "BCS" if have two services)

QUESTION 94

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to prevent the extranet Web site from exceeding 200 GB. What should you recommend?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Limit the number of site collections in the extranet content database
- B. Implement resource throttling for the Web application
- C. Implement a site collection policy
- D. Disable self-service site creation

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q094

BURGOS MNEMO: = "extranet content database"

BURGOS COMMENTS:

About "Site collection policy(ies)" in Q035, Q040, Q067, Q094:

IF HAVE "SharePoint Recycle Bin"

THEN "collection policies"

ELSE other.

About "Self-Service" in Q038, Q094:

IF HAVE "extranet content DB"

THEN is this correct,

ELSE "Self-Service".

QUESTION 95

You are a SharePoint administrator for Contoso, Ltd. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend an authentication method for the intranet that meets the company's requirements. Which authentication method should you recommend?

Exhibit:

The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the external users of Contoso and the employees of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Web Single Sign-on (SSO)
- B. NTLM
- C. Kerberos
- D. Claims

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q095

BURGOS MNEMO: "unauthenticated access across internet" (exhibit) = "Kerberos"

BURGOS COMMENTS:

About pair Q079, Q095:

Q079: "Claims" exhibit asks for "multiple authentication providers in a single zone"

Q124: "Kerberos" exhibit asks for "unauthenticated access across internet"

ORIGINAL COMMENTS:

Configure Kerberos authentication

[http://technet.microsoft.com/en-us/library/cc263449\(office.12\).aspx#section1](http://technet.microsoft.com/en-us/library/cc263449(office.12).aspx#section1)

QUESTION 96

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan the search requirements for the internal users. What should you include in the plan?

Exhibit:

Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Property databases
- B. Index partitions
- C. Crawl databases
- D. Crawl components

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q096

BURGOS MNEMO: = "Crawl components"

BURGOS COMMENTS:

About Q044 and Q096: they are different, but they have the same choices and the same answer.

About "Index Partition" in Q019, Q044, Q096:

IF "distributed across web servers" THEN "Index Partition"

ELSE no.

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,

OTHERWISE, crawl component (see that in this case, "components" appear in plural).

--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

Add or remove a crawl component

<http://technet.microsoft.com/en-us/library/ee805950.aspx>

QUESTION 97

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design a public Web site. The design must minimize costs and use the minimum amount of administrative effort. What should you include in the design?

Exhibit:

Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

QUESTION 102

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution for associating documents to customers. What should you include in the solution?

Exhibit:

Current Environment

You plan to use SharePoint Server 2010 to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 to host custom applications. You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

- A server farm named SharePoint-QA that will be used to validate customizations.
- A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.
- A server farm named SharePoint-Prod that will be used as the production environment. After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010 deployment:

- Project managers must be able to store e-mail in the SharePoint sites.
- Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to restore SharePoint-Prod from the previous day if it fails.
- Certain documents must be associated to customers from the customer database.
- Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.
- The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

- No more than two hours of data must be lost from the customer list.
- No more than 24 hours of data must be lost from the entire server farm.
- The amount of time required to perform backups and restores must be minimized.

- A. Lookup columns
- B. Business Connectivity Services
- C. A Data Retrieval Service
- D. A Content Query Web Part

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q102

BURGOS MNEMO: = "**Lookup columns**"

BURGOS COMMENTS:

About 2 services ("BCS", "UPS," "SSS") in Q015, Q077:

IF "BCS" stand alone THEN other

ELSE ALWAYS "BCS" with

IF "SSS" THEN is this

ELSE "UPS"

@ajax thinks that BCS (choice B) is better.

QUESTION 103

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify what you can deploy between SharePoint-Dev and SharePoint-QA by using content deployment. What should you identify?

Exhibit:

Current Environment

You plan to use SharePoint Server 2010 to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 to host custom applications. You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

- A server farm named SharePoint-QA that will be used to validate customizations.
- A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.
- A server farm named SharePoint-Prod that will be used as the production environment. After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010 deployment:

- Project managers must be able to store e-mail in the SharePoint sites.
- Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to restore SharePoint-Prod from the previous day if it fails.
- Certain documents must be associated to customers from the customer database.
- Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.
- The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

- No more than two hours of data must be lost from the customer list.
- No more than 24 hours of data must be lost from the entire server farm.
- The amount of time required to perform backups and restores must be minimized.

- A. Web Parts and workflows
- B. Web Parts and event receivers
- C. Libraries and Web pages
- D. Libraries and views

Correct Answer: C

QUESTION 104

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design a public Web site. The design must minimize costs and use the minimum amount of administrative effort. What should you include in the design?

Exhibit:

Current Environment

You plan to use SharePoint Server 2010 to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 to host custom applications. You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

- A server farm named SharePoint-QA that will be used to validate customizations.
- A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.
- A server farm named SharePoint-Prod that will be used as the production environment. After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010 deployment:

- Project managers must be able to store e-mail in the SharePoint sites.
- Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to restore SharePoint-Prod from the previous day if it fails.
- Certain documents must be associated to customers from the customer database.
- Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.
- The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

- No more than two hours of data must be lost from the customer list.
- No more than 24 hours of data must be lost from the entire server farm.
- The amount of time required to perform backups and restores must be minimized.

- A. SharePoint solution packages
- B. Microsoft Systems Center Operations Manager
- C. Microsoft SharePoint Designer
- D. Content deployment paths

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q104

BURGOS MNEMO: = "**SharePoint solution packages**"

BURGOS COMMENTS:

About "SharePoint Designer" in Q062, Q078, Q099, Q104:

IF "PerformancePoint" OR "WAS" OR "SharePoint solution" THEN is this

ELSE "SharePoint Designer"

About "Systems Center Operations Manager" in Q006, Q048, Q066, Q104, Q113, Q123:

IF "monitoring solution for the crawl" THEN "Systems Center Operations Manager"

ELSE other

About "content deployment" in Q011, Q025, Q028, Q031, Q055, Q056, Q061, Q081, Q104, Q114:

IF APPEARS WITH "quick deploy" in same choice OR HAVE "Log Shipping" in other choice THEN "Content deployment",

OTHERWISE, no.

@JohnnyBazoooca comments (in @ junkie dump) that the correct should be C because SharePoint Designer is free ("minimize costs", "Sharepoint solutions is free"). I decided to leave this question because we have no comments after this and another dump (@Dizzlin) not changed this

ORIGINAL COMMENTS:

Customizations can be created using Visual Studio 2010 and deployed as SharePoint solution packages (*.wsp).

QUESTION 105

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a document retention solution to meet the company's requirements. What should you include in the recommendations?

Exhibit:

Current Environment

You plan to use SharePoint Server 2010 to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 to host custom applications. You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

- A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.
- A server farm named SharePoint-Prod that will be used as the production environment. After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010 deployment:

- Project managers must be able to store e-mail in the SharePoint sites.
- Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to restore SharePoint-Prod from the previous day if it fails.
- Certain documents must be associated to customers from the customer database.
- Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.
- The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

- No more than two hours of data must be lost from the customer list.
- No more than 24 hours of data must be lost from the entire server farm.
- The amount of time required to perform backups and restores must be minimized.

- A. Web Application user policies
- B. Site collection quotas and locks
- C. Information Rights Management (IRM)
- D. Information management policies

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q105

BURGOS MNEMO: "**document retention solution**" = "Information management policies"

BURGOS COMMENTS:

About "Information management policies" in Q001, Q017, Q025, Q036, Q090, Q098, Q105:

IF HAVE "Web Analytics" OR "UPS" OR "Document Set" OR "use confirmation" OR "document library" OR "PerformancePoint" THEN is this,

OTHERWISE "Information management policies"

ORIGINAL COMMENTS:

An information management policy is a set of rules that govern the availability and behavior of a certain type of important content. Policy enables administrators to control and evaluate who can access information, how long to retain information, and how effectively people are complying with the policy. The most common creators and enforcers of policy are compliance officers, records managers, IT staff, and others who are responsible for managing risk.

Managing Information Management Policy

QUESTION 106

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to meet the communications requirements of the project managers. What should you include in the solution?

Exhibit:

Current Environment

You plan to use SharePoint Server 2010 to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 to host custom applications. You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

- A server farm named SharePoint-QA that will be used to validate customizations.
- A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.
- A server farm named SharePoint-Prod that will be used as the production environment. After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010 deployment:

- Project managers must be able to store e-mail in the SharePoint sites.
- Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to restore SharePoint-Prod from the previous day if it fails.
- Certain documents must be associated to customers from the customer database.
- Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.
- The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

- No more than two hours of data must be lost from the customer list.
- No more than 24 hours of data must be lost from the entire server farm.
- The amount of time required to perform backups and restores must be minimized.

- A. Send To connections
- B. Client integration features
- C. Anonymous authentication
- D. An e-mail-enabled list

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q106

BURGOS MNEMO: = "An **e-mail-enabled** list"

ORIGINAL COMMENTS:

Since Project Managers must be able to store e-mail in the SharePoint sites, an **e-mail enabled list** is required.

Enable and configure e-mail support for a list or library

QUESTION 108

You are a SharePoint administrator for Proseware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to ensure that you can deploy SharePoint Server 2010 on the network. Your solution must minimize costs. What should you do?

Exhibit:

The company has more than 50,000 electronic books stored on a file server. Each electronic book contains two files. One file contains the content and the other file contains a high-resolution image of the book cover. The image files are larger than 50 MB. You plan to deploy a SharePoint Server 2010 server farm and to migrate all of the electronic books to SharePoint.

Server Configurations

Proseware has 10 unused servers that run Windows Server 2003 (64-bit). Two of the servers run Microsoft SQL Server 2005 (64-bit).

Technical Requirements

Proseware administrators have the following technical requirements for the planned SharePoint Server 2010 deployment:

- Must be able to monitor search queries and identify which queries do not return results.
- Must have access to self-service reports on average page usage and average site usage.
- Must be able to minimize the amount of disk I/O on the SQL databases when users retrieve the book cover images.

Availability Requirements

Proseware has the following availability requirements for the planned SharePoint Server 2010 deployment:

- Crawling fault tolerance is not required.
- Crawling of content must not affect the performance of Web servers.
- Users must be able to access SharePoint sites and content if a single server fails.
- Users must be able to access and search SharePoint sites if a single SharePoint server fails.

User Requirements

Proseware has the following user requirements for the planned SharePoint Server 2010 deployment:

- Managers must be able to monitor ongoing business metrics by using scorecards.
- Managers must be able to view aggregate data from multiple sources by using dashboards.

- A. Install Windows Server 2003 R2 on all servers that will run SharePoint Server 2010
- B. Install Windows Server 2008 on all servers that will run SharePoint Server 2010
- C. Install Windows Server 2008 on all SQL servers.
- D. Upgrade all SQL servers to SQL Server 2008 (64-bit)

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q108

BURGOS MNEMO: = "Install Windows Server 2008 on SharePoint server"

ORIGINAL COMMENTS:

Since the 64-bit edition of Microsoft SQL Server 2005 with SP3 is a supported database platform for SharePoint 2010, only the servers which need to be utilized as SharePoint 2010 Web Servers will need to be upgraded to Windows Server 2008.

Hardware and software requirements
<http://technet.microsoft.com/en-us/library/cc262485.aspx>

QUESTION 109

You are a SharePoint administrator for Proseware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a storage solution for the book covers that meets the company's technical requirements. What storage solution should you recommend?

Exhibit:

The company has more than 50,000 electronic books stored on a file server. Each electronic book contains two files. One file contains the content and the other file contains a high-resolution image of the book cover. The image files are larger than 50 MB. You plan to deploy a SharePoint Server 2010 server farm and to migrate all of the electronic books to SharePoint.

Server Configurations

Proseware has 10 unused servers that run Windows Server 2003 (64-bit). Two of the servers run Microsoft SQL Server 2005 (64-bit).

Technical Requirements

Proseware administrators have the following technical requirements for the planned SharePoint Server 2010 deployment:

- Must be able to monitor search queries and identify which queries do not return results.
- Must have access to self-service reports on average page usage and average site usage.
- Must be able to minimize the amount of disk I/O on the SQL databases when users retrieve the book cover images.

Availability Requirements

Proseware has the following availability requirements for the planned SharePoint Server 2010 deployment:

- Crawling fault tolerance is not required.
- Crawling of content must not affect the performance of Web servers.
- Users must be able to access SharePoint sites and content if a single server fails.
- Users must be able to access and search SharePoint sites if a single SharePoint server fails.

User Requirements

Proseware has the following user requirements for the planned SharePoint Server 2010 deployment:

- Managers must be able to monitor ongoing business metrics by using scorecards.
- Managers must be able to view aggregate data from multiple sources by using dashboards.

- A. Remote BLOB Storage
- B. Data Retrieval Services
- C. Additional index servers
- D. Additional content databases

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q109

BURGOS MNEMO: = "Remote **BLOB** Storage"

ORIGINAL COMMENTS:

Since book images will be stored as binary files, the way to reduce disk I/O is to remotely store those binary files on the file system rather than directly within the database. Therefore, the correct answer choice is **Remote BLOB Storage**.

QUESTION 110

You are a SharePoint administrator for Proseware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of SharePoint Server 2010 servers required for the deployment. How many SharePoint servers should you identify?

Exhibit:

The company has more than 50,000 electronic books stored on a file server. Each electronic book contains two files. One file contains the content and the other file contains a high-resolution image of the book cover. The image files are larger than 50 MB. You plan to deploy a SharePoint Server 2010 server farm and to migrate all of the electronic books to SharePoint.

Server Configurations

Proseware has 10 unused servers that run Windows Server 2003 (64-bit). Two of the servers run Microsoft SQL Server 2005 (64-bit).

Technical Requirements

Proseware administrators have the following technical requirements for the planned SharePoint Server 2010 deployment:

- Must be able to monitor search queries and identify which queries do not return results.
- Must have access to self-service reports on average page usage and average site usage.
- Must be able to minimize the amount of disk I/O on the SQL databases when users retrieve the book cover images.

Availability Requirements

Proseware has the following availability requirements for the planned SharePoint Server 2010 deployment:

- Crawling fault tolerance is not required.
- Crawling of content must not affect the performance of Web servers.
- Users must be able to access SharePoint sites and content if a single server fails.
- Users must be able to access and search SharePoint sites if a single SharePoint server fails.

User Requirements

Proseware has the following user requirements for the planned SharePoint Server 2010 deployment:

- Managers must be able to monitor ongoing business metrics by using scorecards.
- Managers must be able to view aggregate data from multiple sources by using dashboards.

- A. 5
- B. 4
- C. 3
- D. 2

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 112

You are a SharePoint administrator for Lucerne Publishing. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a backup strategy for the content in a SharePoint site collection. The strategy must meet the following requirements:

- Adhere to the company's business requirements.
- Minimize the amount of time required to restore the entire server farm.

What should you include in the backup strategy?

Exhibit:

The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

Development Process

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

Security Requirements

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. Granular backups and Microsoft SQL Server transaction log backups
- B. Full farm backups and Microsoft SQL Server transaction log backups

- C. Full farm backups and granular backups
- D. Full farm backups and differential farm backups

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

Development Process

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

Security Requirements

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. Systems Center Operations Manager
- B. Systems Center Configuration Manager

- C. PerformancePoint Service application
- D. Performance Monitor

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q113

BURGOS MNEMO: "**monitoring solution for the crawl**" = "Systems Center Operations Manager"

BURGOS COMMENTS:

About "Systems Center Operations Manager" in Q006, Q048, Q066, Q104, Q113, Q123:

IF "monitoring solution for the crawl" THEN "Systems Center Operations Manager"

ELSE other

About "PerformancePoint" in Q001, Q049, Q078, Q098, Q111, Q113:

IF "to gather KPIs" OR "business intelligence strategy" OR APPEARS "Import" in same choice THEN
"PerformancePoint Services"

ELSE other

ORIGINAL COMMENTS:

Since SharePoint Health Analyzer is not listed amongst the options, the only remaining monitoring solution is
Systems Center Operations Manager.

QUESTION 114

You are a SharePoint administrator for Lucerne Publishing. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to move custom Web Parts from the test environment to the production environment. What should you include in the recommendations?

Exhibit:

The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. Variations
- B. SharePoint farm solutions

- C. Content deployment paths
- D. Content deployment jobs

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q114

BURGOS MNEMO: = "SharePoint farm solutions"

BURGOS COMMENTS:

About "content deployment" in Q011, Q025, Q028, Q031, Q055, Q056, Q061, Q081, Q104, Q114:

IF APPEARS WITH "quick deploy" in same choice OR HAVE "Log Shipping" in other choice THEN "Content deployment",

OTHERWISE, no.

ORIGINAL COMMENTS:

Custom Web Parts need to be developed through Visual Studio 2010 and therefore must be created as SharePoint farm solutions.

QUESTION 115

You are a SharePoint administrator for Lucerne Publishing. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to limit search results based on the company's compliance requirements. You must achieve this goal by using the minimum amount of administrative effort. What should you recommend?

Exhibit:

The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

QUESTION 119

You are a SharePoint administrator for Graphic Design Institute. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a maintenance plan for the content databases that meets the institute's database requirements. What should you include in the recommendations?

Exhibit:

The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network.

Technical Requirements

Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.
- Each course site must contain a custom Web Part that retrieves data from a metadata search.
- Each course site must contain a custom navigation bar.
- Each course site must contain a proprietary file type.
- The load time for each course site must be minimized.

Database Requirements

Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:

- The latency of search queries for metadata searches must be minimized.
- The server farm configuration must be backed up weekly.
- White space in the content databases must be minimized.
- The number of databases must be minimized.

Student Requirements

Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:

- Students must be able to manage and organize content that is relevant to them.
- Students must be able to share documents with other students.

Security Requirements

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

- Each department must be able to manage the security of its respective course sites.
- Each department must be able to manage its respective recycle bin.

- A. Defragment the hard disk drives of the Web server every three months.
- B. Defragment the hard disk drives of the Web server every six months.
- C. Reset the search indexes every three months.
- D. Shrink the database every six months.

Correct Answer: D

- Students must be able to share documents with other students.

Security Requirements

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

- Each department must be able to manage the security of its respective course sites.
- Each department must be able to manage its respective recycle bin.

A. Five server farms and 20 Web applications in each server farm

- B. Five server farms and one Web application in each server farm
- C. A single server farm and five Web applications
- D. A single server farm and one Web application

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q124

BURGOS MNEMO: = "1 Server, 1 WebApp"

BURGOS COMMENTS:

About pair Q097, Q124: (WebApp ALWAYS 1)

Q097: 2/1 - asks for "avaiable if single server fail", so:

Q124: 1/1

QUESTION 125

125. You are a SharePoint administrator for Graphic Design Institute. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to implement a solution that meets the institute's student requirements. What should you implement?

Exhibit:

The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network.

Technical Requirements

Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.
- Each course site must contain a custom Web Part that retrieves data from a metadata search.
- Each course site must contain a custom navigation bar.
- Each course site must contain a proprietary file type.
- The load time for each course site must be minimized.

Database Requirements

Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:

- The latency of search queries for metadata searches must be minimized.
- The server farm configuration must be backed up weekly.
- White space in the content databases must be minimized.
- The number of databases must be minimized.

Student Requirements

Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:

- Students must be able to manage and organize content that is relevant to them.
- Students must be able to share documents with other students.

Security Requirements

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

- Each department must be able to manage the security of its respective course sites.
- Each department must be able to manage its respective recycle bin.

- A. My Sites and the Content Organizer
- B. My Sites and social tags
- C. Audiences and user profiles
- D. Audiences and the Content Organizer

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q125

BURGOS MNEMO: = "My Sites and **social tags**"

BURGOS COMMENTS:

About "Audiences" in Q017, Q021, Q125:

IF "WebParts may be visible to an specific department" THEN "Audiences"
ELSE no

ORIGINAL COMMENTS:

Since the student requirement is for them to be able to manage and organize content that is relevant to them, they will need to use My Sites. Social tagging makes it easier to share information with others.

Manage My Site settings

QUESTION 126

You are a SharePoint administrator for Wingtip Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend which SharePoint Server 2010 feature meets the technical requirements of the distribution centers. Which feature should you recommend?

Exhibit:

The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager.

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2008 (64-bit)	Index
Server4	Windows Server 2008 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Server5 runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

- A. The Publishing Infrastructure
- B. The enterprise site collection features
- C. The Content Type Syndication Hub
- D. The Application Registry Service

Correct Answer: A

Section: (none)

QUESTION 127

You are a SharePoint administrator for Tailspin Toys. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution to rank the search results that meets the company's requirements.

What should you include in the solution?

Exhibit:

The company has a main office. The main office is located in London. The company has 1,000 employees and 1,000 customers. You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall. The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008. Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. Search scopes
- B. Host distribution rules
- C. Crawl rules
- D. Authoritative pages

Correct Answer: D
Section: (none)

Explanation

Explanation/Reference:

QUESTION 129

You are a SharePoint administrator for Lucerne Publishing. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to identify the minimum number of Web servers required for the SharePoint Server 2010 production environment. How many Web servers should you identify?

Exhibit:

The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

Development Process

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

Security Requirements

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

A. 4

B. 3

- C. 2
- D. 1

Correct Answer: C

QUESTION 131

You are a SharePoint administrator for Litware, Inc. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to recommend a solution that meets the company's compliance requirements. What should you include in the solution?

Exhibit:

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.
- The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. Windows Server 2008 Security Compliance Management Toolkit
- B. Microsoft Systems Center Operations Manager

"Users must not be able to print confidential documents that are stored in SharePoint sites". Rights Management Services (RMS)

QUESTION 132

You are a SharePoint administrator for Trey Research. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to design a maintenance strategy that meets the company's business continuity requirements. What should you include in the strategy?

Exhibit:

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

The Current Environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts. SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Separate site collections
- B. Sandboxed solutions

QUESTION 135

You have multiple SharePoint Server 2010 server farms located in the following cities:

- Lisbon
- New York
- Auckland

You need to recommend a solution to aggregate all SharePoint application events. The solution must minimize the amount of network traffic. What should you recommend?

- A. Replicate the trace logs and the logging databases to a central location.
- B. Implement Microsoft Systems Center Operations Manager.
- C. Implement Microsoft SQL Server log shipping.
- D. Configure usage and health data collection.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q006

BURGOS MNEMO: = "Configure **usage and health** data collection"

BURGOS COMMENTS:

About "Systems Center Operations Manager" in Q006, Q048, Q066, Q104, Q113, Q123:

IF "monitoring solution for the crawl" THEN "Systems Center Operations Manager"

ELSE other

ORIGINAL COMMENTS:

Since the solution must minimize network traffic, it is best to localize the monitoring of the SharePoint environment by utilizing SharePoint Health Analyzer.

Configure usage and health data collection

<http://technet.microsoft.com/en-us/library/ee663480.aspx>

If there was a requirement to be able to centrally monitor all servers outside of the SharePoint environment, Systems Center Operations Manager would be a better option. However, nothing in the question seems to indicate this requirement.

Microsoft Systems Center helps you deliver and ensure a reliable end-user experience with your SharePoint services by monitoring, managing, and protecting the SharePoint environment.

Solutions for Optimizing SharePoint

<http://www.microsoft.com/systemcenter/en/us/optimizing-sharepoint.aspx>

QUESTION 136

You plan to implement SharePoint Server 2010 for your company's public Website. The site will display information about the products that the company sells. You need to ensure that all the Web pages in the site display the company logo at the top of the page and a copyright notice at the bottom of the page. What should you implement?

- A. Variations
- B. Site templates
- C. Page layouts
- D. Master pages

Correct Answer: D

Section: (none)

BURGOS COMMENTS:

About "Master Page" in Q012, Q122:

IF HAVE "Site definitions" THEN "Site definitions"

ELSE "Master Page" choice.

About "Page Layouts" in Q012: Instead of 70-667, "Page Layouts" never appears as correct answer.

ORIGINAL COMMENTS:

Since all pages should contain the company logo and a copyright notice at the bottom, you can only accomplish this using modified master pages.

QUESTION 137

You plan to implement a SharePoint Server 2010 server farm. The farm will be used to store documents that are as much as 100 MB. You need to recommend a search solution to meet the following requirements:

- Provide security-trimmed search results.
- Provide thumbnail previews of search results.
- Provide the ability to filter searches by using metadata.
- Minimize costs.

What should you recommend?

- A. Microsoft SQL Server Full-Text Search
- B. Microsoft Search Server Express
- C. Microsoft FAST Search Server
- D. Microsoft SharePoint search server

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Q016

BURGOS MNEMO: = "Microsoft **FAST Search** Server"

ORIGINAL COMMENTS:

Because of the need to be able to filter searches by using metadata, the only applicable solution is using FAST Search Server.

QUESTION 138

You have a SharePoint Server 2010 server farm. Every night, you perform a full backup of the farm and a backup of all the SharePoint databases. You are planning the recovery strategy for the Secure Store Service.

You need to identify which information is required to recover the Secure Store Service. What should you identify?

- A. The Secure Store Service passphrase
- B. The Secure Store Service application pool identity
- C. The farm passphrase
- D. The Central Administration application pool identity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q020

BURGOS MNEMO: = "Secure Store Service **passphrase**"

BURGOS COMMENTS:

About "Central Administration" in Q020, Q026, Q123:

IF "backup requirement" THEN "Central Administration"

ELSE other

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")

ELSE no.

ORIGINAL COMMENTS:

Configure the Secure Store Service

<http://technet.microsoft.com/en-us/library/ee806866.aspx>

QUESTION 139

You are load testing a SharePoint Server 2010 server farm. You need to simulate 30,000 concurrent user connections. Which tool should you use?

- A. SQL Server Profiler
- B. Microsoft Visual Studio 2008
- C. Microsoft SQL Server Management Studio
- D. Internet Information Services (IIS) Manager

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q022

BURGOS MNEMO: = "Microsoft **Visual Studio** 2008"

ORIGINAL COMMENTS:

Visual Studio 2008 is the only tool of the ones mentioned that can perform such an action by using the Visual Studio 2008 Load Testing capabilities available through Visual Studio 2008 Team Suite edition.

QUESTION 140

You have a Microsoft Office SharePoint Server 2007 server farm. The farm contains the servers configured as shown in the following table.

Server name	Server component	Server operating system
Server1	SharePoint Server 2007	Windows Server 2008 (64-bit)
Server2	Microsoft SQL Server 2008	Windows Server 2008 R2 (64-bit)

You need to recommend a solution to migrate to SharePoint Server 2010. Your solution must meet the following requirements:

- Prevent the need for additional hardware.
- Minimize downtime.

What should you recommend?

- A. An in-place upgrade
- B. Alternate access mappings
- C. A database attach upgrade
- D. A backup and restore

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q023

BURGOS MNEMONIC: "Minimize downtime" = "in-place upgrade"

BURGOS COMMENTS:

About "in-place upgrade" in Q023, Q057, Q085:

IF IN EXHIBIT "does not use Excel Services (and others)" and require "minimal admin effort",
THEN "attach",
ELSE "in-place".

QUESTION 141

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff. The network contains a single Active Directory domain. You plan to deploy SharePoint Server 2010 to support both offices. You need to recommend a solution that meets the following requirements:

- Network traffic across the WAN link must be minimized.
- All documents must be stored on servers located in the office where the documents were created.
- SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. A single server farm that uses two site collections and a Web server in each office
- B. A single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices
- C. A server farm in each office that has a Web server located in each office
- D. A server farm in each office and a search federation between the farms

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q008

BURGOS MNEMONIC: = "search federation"

ORIGINAL COMMENTS:

To comply to the requirement of storing documents on localized servers, you should create a server farm in each office. To be able to search both farms/offices for documents, you should implement a search federation between both farms.

QUESTION 142

You are a SharePoint administrator for Trey Research. The company policy and requirements are described in

the Exhibit (Click the Exhibit button).

You need to design a solution to ensure that all Web servers can access their databases if a single database server fails. Your solution must minimize costs. What should you include in the solution?

Exhibit:

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

The Current Environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts. SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Windows Network Load Balancing
- B. SQL Server log shipping
- C. Hardware load balancing
- D. Failover clustering

Correct Answer: D
Section: (none)

Explanation

Explanation/Reference:

Q058

BURGOS MNEMO: "if a single database server fails" = "Failover clustering"

BURGOS COMMENTS:

About "NLB" in Q009, Q014, Q058:

IF "distributed across" only THEN Sandboxed

IF cluster solution for Web THEN "NLB",

IF for SQL THEN Failover Cluster

ORIGINAL COMMENTS:

Failover clustering is the only solution that can be used by SQL Server databases to ensure accessibility after a single database server fails.

QUESTION 143

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. The company policy and requirements are described in the Exhibit (Click the Exhibit button).

You need to plan the search requirements for the internal users. What should you include in the plan?

Exhibit:

Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Property databases
- B. Index partitions
- C. Crawl databases
- D. Crawl components

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Q096

BURGOS MNEMO: = "Crawl components"

BURGOS COMMENTS:

About Q044 and Q096: they are different, but they have the same choices and the same answer.

About "Index Partition" in Q019, Q044, Q096:

IF "distributed across web servers" THEN "Index Partition"
ELSE no.

About "crawl component" in Q005, Q024, Q039, Q044, Q096:

IF HAVE mirror OR hosts EXISTS THEN is yhis,
OTHERWISE, crawl component (see that in this case, "components" appear in plural).
--Q034 and Q073 just say about crawl, but it is not focus of choice.

ORIGINAL COMMENTS:

Add or remove a crawl component

<http://technet.microsoft.com/en-us/library/ee805950.aspx>

QUESTION 144

You have a SharePoint Server 2010 server farm. Every night, you perform a full backup of the farm and a backup of all the SharePoint databases. You are planning the recovery strategy for the Secure Store Service.

You need to identify which information is required to recover the Secure Store Service. What should you identify?

- A. The Secure Store Service passphrase
- B. The Secure Store Service application pool identity
- C. The farm passphrase
- D. The Central Administration application pool identity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Q020

BURGOS MNEMO: = "Secure Store Service **passphrase**"

BURGOS COMMENTS:

About "Central Administration" in Q020, Q026, Q123:

IF "backup requirement" THEN "Central Administration"
ELSE other

About "SSS" in questions Q009, Q020, Q045, Q071, Q077, Q091, Q117:

IF TOGETHER "BCS" or "passphrase" OR OTHER CHOICES are ("SQL", "RDS", "AD FS") THEN is this ("SSS")
ELSE no.

ORIGINAL COMMENTS:

Configure the Secure Store Service
