## **Exam A**

### **QUESTION 1**

*Topic 1, Northwind Traders*

#### **Active Directory Configurations**

*Northwind Traders has the following Active Directory configurations:*

- *User attributes are stored in Active Directory.*
- *Active Directory group membership is based on the company's departments.*

#### **Business Requirements**

*Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:*

- *Custom workflows must be reused across multiple document libraries.*
- *Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.*
- *The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.*

#### **Technical Requirements**

*Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- *Databases must not exceed 100GB.*
- *SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.*
- *All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.*
- *To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.*

#### **Security Requirements**

*Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:*

- *All users in the same department must share the same level of access to site content.*
- *Users in the human resources department must be prevented from browsing accounting department documents.*

#### **User Requirements**

*Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:*

- *All customizations must be authored by a single team of developers.*
  - *All customizations must be deployed by the site collection administrators.*
- 
- 

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a solution that provides users with the ability to update their user attributes in Active Directory.

What should you recommend?

- A. a User Profile Service Application
- B. Active Directory Federation Services (AD FS)
- C. Business Connectivity Services
- D. Active Directory Rights Management Services (AD RMS)

**Correct Answer: A**

## **QUESTION 2**

*Topic 1, Northwind Traders*

### **Active Directory Configurations**

*Northwind Traders has the following Active Directory configurations:*

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

### **Business Requirements**

*Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:*

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

### **Technical Requirements**

*Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

### **Security Requirements**

*Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:*

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

*Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:*

- All customizations must be authored by a single team of developers.
  - All customizations must be deployed by the site collection administrators.
- 
- 

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to identify the minimum number of content databases required for the planned SharePoint Server 2010 deployment.

How many content databases should you identify?

- A. 50
- B. 1
- C. 11
- D. 5

**Correct Answer:** A

**Section:** Case 1

**Explanation**

**Explanation/Reference:**

Explanation:

5 terrabytes 5000/100 = 50 DB

### QUESTION 3

*Topic 1, Northwind Traders*

#### **Active Directory Configurations**

*Northwind Traders has the following Active Directory configurations:*

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

#### **Business Requirements**

*Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:*

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

#### **Technical Requirements**

*Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of

SharePoint Server 2010.

### **Security Requirements**

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
  - All customizations must be deployed by the site collection administrators.
- 
- 

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a search solution that meets the company's business requirements.

What should you include in the solution?

- A. authoritative pages
- B. search scopes
- C. federated locations
- D. host distribution rules

**Correct Answer: A**

**Explanation/Reference:**

Explanation:

### **QUESTION 4**

Topic 1, Northwind Traders

### **Active Directory Configurations**

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

### **Business Requirements**

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

### **Technical Requirements**

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

### **Security Requirements**

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

### **User Requirements**

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a strategy to manage access to SharePoint content. You must achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

- A. Configure managed accounts.
- B. Implement Active Directory Lightweight Directory Services (AD LDS).
- C. Add Active Directory groups to the SharePoint groups.
- D. Create user policies and permission policies for the Web application.

**Correct Answer: C**

## QUESTION 5

Topic 2, Litware Inc

### Network Configurations

*Litware has the following network configurations:*

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.

*The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.*

### Search Requirements

*Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.*

### Monitoring Requirements

*Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.*

### Compliance Requirements

*Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:*

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

### Security Requirements

- Litware has the following security requirements for the planned SharePoint Server 2010
  - Only required TCP/IP ports must be opened on the firewall.
  - Access to the SharePoint sites via the Internet must use client Certificates authentication.
  - Users on the internal network must use Kerberos authentication to access the SharePoint sites.
  - User authorization management must require the minimum amount of configuration and ongoing maintenance.
- 

You are a SharePoint administrator for Litware, Inc.

The company has a main office and a branch office. The company has 14,000 employees.

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

You need to design an authentication solution to provide users with access to the SharePoint sites from the Internet.

What should you include in the solution?

- A. The Secure Store Service application
- B. Active Directory Rights Management Services (AD RMS)
- C. Active Directory Certificate Services (AD CS)
- D. The Access Services service application

**Correct Answer:** C

## QUESTION 11

Topic 3, Contoso Ltd

### **Line of Business Applications**

*The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.*

### **Intranet Requirements**

*Contoso has the following requirements for its intranet site:*

- *The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.*
- *Each departmental site must have its own database.*
- *Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.*
- *The site must support as many as 500 concurrent connections for InfoPath Forms Services.*
- *Per-user identity authentication must be used for PerformancePoint Services.*
- *My Sites must be created as a separate Web application.*
- *My Sites must be available for all users.*

### **Extranet Requirements**

*Contoso has the following requirements for its extranet site:*

- *The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.*
- *Partner company employees must be able to create secure collaboration sites and site collections easily.*
- *Partner company employees must not have accounts in the Contoso Active Directory forest.*
- *The extranet site must be created as a separate Web application.*
- *Each site collection must have a 2-GB quota.*

### **Public Site Requirements**

*Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.*

-----

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various partner companies.

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to identify the minimum number of site collections required for the planned deployment of SharePoint Server 2010.

How many site collections should you identify?

- A. 3
- B. 10

- *The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.*
- *Each departmental site must have its own database.*
- *Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.*
- *The site must support as many as 500 concurrent connections for InfoPath Forms Services.*
- *Per-user identity authentication must be used for PerformancePoint Services.*
- *My Sites must be created as a separate Web application.*
- *My Sites must be available for all users.*

#### **Extranet Requirements**

*Contoso has the following requirements for its extranet site:*

- *The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.*
- *Partner company employees must be able to create secure collaboration sites and site collections easily.*
- *Partner company employees must not have accounts in the Contoso Active Directory forest.*
- *The extranet site must be created as a separate Web application.*
- *Each site collection must have a 2-GB quota.*

#### **Public Site Requirements**

*Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.*

-----

-----

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various partner companies.

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to recommend a solution to provide unauthenticated users with the ability to submit content to document libraries on the public Web site.

What should you recommend?

- A. an e-mail-enabled document library
- B. a Content Organizer rule
- C. a new service connection
- D. an information management policy

**Correct Answer: A**

## **QUESTION 17**

*Topic 4, Blue Yonder Airlines*

## **SharePoint Server 2007 Configurations**

*The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.*

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

### Technical Requirements for Upgrade

Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

### Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

### User Requirements

Users must be able to access all documents during the upgrade process.

You are a SharePoint administrator for Blue Yonder Airlines.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend a solution for migrating all PerformancePoint 2007 objects to SharePoint Server 2010.

What should you include in the solution?

- A. the Import PerformancePoint Server 2007 Content wizard
- B. SharePoint Designer 2010
- C. The Import Application Definition File wizard
- D. PerformancePoint Dashboard Designer

## **QUESTION 22**

*Topic 5, Graphic design institute*

### **Technical Requirements**

*Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- *Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.*
- *Each course site must contain a custom Web Part that retrieves data from a metadata search.*
- *Each course site must contain a custom navigation bar.*
- *Each course site must contain a proprietary file type.*
- *The load time for each course site must be minimized.*

### **Database Requirements**

*Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:*

- *The latency of search queries for metadata searches must be minimized.*
- *The server farm configuration must be backed up weekly.*
- *White space in the content databases must be minimized.*
- *The number of databases must be minimized.*

### **Student Requirements**

*Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:*

- *Students must be able to manage and organize content that is relevant to them.*
- *Students must be able to share documents with other students.*

## Security Requirements

*Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:*

- Each department must be able to manage the security of its respective course sites.
  - Each department must be able to manage its respective recycle bin.
- 
- 

You are a SharePoint administrator for Graphic Design Institute.

The institute has five departments. Each department offers 20 courses.

You plan to deploy SharePoint Server 2010 on the network.

You need to recommend a maintenance plan for the content databases that meets the institute's database requirements.

What should you include in the recommendations?

- A. Shrink the database every six months.
- B. Defragment the hard disk drives of the Web server every three months.
- C. Reset the search indexes every three months.
- D. Defragment the hard disk drives of the Web server every six months.

## QUESTION 28

*Topic 6, Wide World Importers*

### **Current Environment**

*The company uses Windows Server 2008 Hyper-V for server virtualization.*

*The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.*

*You plan to implement SharePoint Server 2010.*

### **Planned Server Configuration**

*As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.*

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

*You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.*

### **Technical Requirements**

*Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### **Monitoring Requirements**

*You plan to monitor the following search metrics for SharePoint -Farm:*

- Crawl queue
- Query latency
- Crawl rate per type

-----  
-----  
You are a SharePoint administrator for Wide World Importers.

You migrate all of the documents from the partner company to a new Web application. You configure the Web application to use Forms-based authentication.

You discover that search results exclude the migrated documents. The search results include all other documents.

You need to ensure that the search results include all of the migrated documents.

What should you create?

- A. a crawl rule
- B. a search scope
- C. a host distribution rule
- D. a crawler impact rule

**Correct Answer: A**

**Section: Case 6**

Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

*You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.*

#### **Technical Requirements**

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### **Monitoring Requirements**

You plan to monitor the following search metrics for SharePoint -Farm:

- Crawl queue
  - Query latency
  - Crawl rate per type
- 
- 

You are a SharePoint administrator for Wide World Importers.

You need to identify the minimum number of Hyper-V servers required for the planned deployment of SharePoint Server 2010.

How many servers should you identify?

- A. 3
- B. 5
- C. 1
- D. 2

**Correct Answer: D**

### **QUESTION 30**

*Topic 6, Wide World Importers*

### **Current Environment**

*The company uses Windows Server 2008 Hyper-V for server virtualization.*

*The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.*

*You plan to implement SharePoint Server 2010.*

### **Planned Server Configuration**

*As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.*

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

### Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### Monitoring Requirements

You plan to monitor the following search metrics for SharePoint -Farm:

- Crawl queue
- Query latency
- Crawl rate per type

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution that meets the company's monitoring requirements.

What should you recommend?

- A. Web Analytics reports
- B. SharePoint Health Analyzer
- C. administrative reports
- D. Internet Information Services (IIS) logs

**Correct Answer: C**

Explanation:

### QUESTION 31

Topic 6, Wide World Importers

### Current Environment

The company uses Windows Server 2008 Hyper-V for server virtualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

You plan to implement SharePoint Server 2010.

### **Planned Server Configuration**

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

### **Technical Requirements**

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### **Monitoring Requirements**

You plan to monitor the following search metrics for SharePoint -Farm:

- Crawl queue
  - Query latency
  - Crawl rate per type
- 
- 

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution to migrate all documents from the partner company to SharePoint-Farm.

What should you include in the solution?

- A. Read-only databases
- B. Information Rights Management (IRM)
- C. Site Collection policies
- D. Offline databases

**Correct Answer: A**  
**Section: Case 6**

## Explanation

Explanation:

### QUESTION 32

Topic 6, Wide World Importers

### Current Environment

The company uses Windows Server 2008 Hyper-V for server virtualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

You plan to implement SharePoint Server 2010.

### Planned Server Configuration

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

### Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

### Monitoring Requirements

You plan to monitor the following search metrics for SharePoint -Farm:

- Crawl queue
  - Query latency
  - Crawl rate per type
- 
- 

You are a SharePoint administrator for Wide World Importers.

You need to ensure that users can receive search results for all content in the organization if a single server

fails.

What should you do?

- A. Add a new crawl component.
- B. Create multiple server name mappings.
- C. Implement query component mirroring.
- D. Implement host distribution rules.

**Correct Answer: C**

**Section: Case 6**

**Explanation**

**Explanation/Reference:**

### QUESTION 33

*Topic 6, Wide World Importers*

#### **Current Environment**

*The company uses Windows Server 2008 Hyper-V for server virtualization.*

*The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.*

*You plan to implement SharePoint Server 2010.*

#### **Planned Server Configuration**

*As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.*

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

*You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.*

#### **Technical Requirements**

*Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

#### **Monitoring Requirements**

You plan to monitor the following search metrics for SharePoint -Farm:

- Crawl queue
  - Query latency
  - Crawl rate per type
- 
- 

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution to ensure that new content added to the SharePoint sites is included in all search results within 30 minutes of being added.

What should you include in the solution?

- A. crawl components
- B. index partitions
- C. property databases
- D. crawl databases

**Correct Answer: A**

**Section: Case 6**

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 34**

*Topic 7, Trey Research*

#### **Server Configurations**

*The SharePoint Server 2007 environment includes the servers configured as shown in the following table.*

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

*The current environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog.*

*The SharePoint sites are accessed via a hardware load balancer.*

#### **Business Continuity Requirements**

*Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts.*

*SharePoint patches and service packs must be tested before they are deployed to the production environment.*

#### **Departmental Requirements**

*Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:*

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

### **User Requirements**

*Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections.*

*You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment.*

*Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.*

---

---

You are a SharePoint administrator for Trey Research.

You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010.

You need to design a maintenance strategy that meets the company's business continuity requirements.

What should you include in the strategy?

- A. separate site collections
- B. sandboxed solutions
- C. a separate server farm
- D. an additional Web server

**Correct Answer: C**

**Section: Case 7**

## **Network Configuration**

*The company has an internal network and a perimeter network.*

## **Technical Requirements**

*Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.

- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

### **Security Requirements**

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

### **Business Process**

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
  - Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
  - Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.
- 
- 

You are a SharePoint administrator for Adventure Works.

You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site.

You need to recommend a solution to convert the catalogs.

What should you include in the solution?

- A. Microsoft SharePoint Designer
- B. InfoPath Forms Services
- C. Word Automation Services
- D. Access Services

**Correct Answer: C**

Explanation:

#### **QUESTION 48**

*Topic 10, A Datum Corporation*

#### **Current Environment**

*You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.*

*The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.*

#### **SharePoint Server 2007 Configuration**

*The SharePoint Server 2007 environment includes the servers configured as shown in the following table.*

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

*Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).*

#### **Technical Requirements**

*You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained.*

*Every 120 days, site collection administrators must confirm that their site collections are still in use. If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.*

#### **Security Requirements**

*A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:*

- *Users must be assigned the most restrictive permissions possible.*
- *The deployment must support authentication for all branch office users.*
- *Support for the branch office users must not require changes to the client computers.*
- *All authentications to access SharePoint Server 2010 must use a cryptographic exchange.*

#### **User Requirements**

*A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:*

- *Users must be able to create sites without any help from an administrator.*

- Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

---

---

You are a SharePoint administrator for A. Datum Corporation.

The company has a main office and a branch office.

The company has 2,000 users.

You need to design a search solution to meet the company's user requirements. Your solution must minimize costs.

What should you include in the design?

- A. Two servers that have the Web Server role and query component installed, and two servers that have the crawl component installed
- B. Two servers that have the Web Server role and crawl component installed and two servers that have the query component installed
- C. Two servers that have the Web Server role, query component, and crawl component installed
- D. Two servers that have the Web Server role installed, two servers that have the query component installed, and two servers that have the crawl component installed

## **QUESTION 54**

*Topic 11, Lucerne Publishing*

### **Server Configurations**

*The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server.*

*You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.*

### **Business Requirements**

*Lucerne Publishing has the following business requirements if a single server fails:*

- No more than 144 hours of indexed content must be lost.*
- The Search Service must be recovered within 36 hours.*
- No more than 15 minutes of content must be lost.*
- Content must be recovered within 36 hours.*

### **Compliance Requirements**

*Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.*

### **Capacity Planning**

*You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.*

### **Monitoring Requirements**

*Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.*
- The reports must contain an aggregated view of all system and application event errors.*

### **Development Process**

*You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.*

### **Security Requirements**

*The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.*

### **User Requirements**

*Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.*

---

---

You need to recommend a backup strategy for the content in a SharePoint site collection. The strategy must meet the following requirements:

- Adhere to the company's business requirements.
- Minimize the amount of time required to restore the entire server farm.

What should you include in the backup strategy?

- A. granular backups and Microsoft SQL Server transaction log backups
- B. full farm backups and granular backups
- C. full farm backups and Microsoft SQL Server transaction log backups
- D. full farm backups and differential farm backups

-----

-----

You are a SharePoint administrator for Lucerne Publishing.

The company has a main office. The main office is located in London. The company has 200 employees.

The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content.

You need to recommend a solution to limit search results based on the company's compliance requirements. You must achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

- A. content sources
- B. managed properties
- C. search scopes
- D. authoritative pages

**Correct Answer: B**

Explanation:

### **QUESTION 56**

*Topic 11, Lucerne Publishing*

### **Server Configurations**

<http://www.gratisexam.com/>

*The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server.*

*You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.*

### **Business Requirements**

*Lucerne Publishing has the following business requirements if a single server fails:*

- No more than 144 hours of indexed content must be lost.*
- The Search Service must be recovered within 36 hours.*
- No more than 15 minutes of content must be lost.*
- Content must be recovered within 36 hours.*

### **Compliance Requirements**

*Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.*

### **Capacity Planning**

*You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.*

### **Monitoring Requirements**

*Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.*
- The reports must contain an aggregated view of all system and application event errors.*

### **Development Process**

*You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.*

### **Security Requirements**

*The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.*

### **User Requirements**

*Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.*

**QUESTION 64**

## Topic 12, Fabrikam Inc

You are a SharePoint administrator for Fabrikam, Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

### Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals ( RFPs ). Many documents are generated for each RFP. These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese. The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

### Technical Requirements

- Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:
- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

### Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

-----

You are a SharePoint administrator for Fabrikam , Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to plan a backup strategy for the server farm. Your solution must minimize costs.

What should you include in the backup strategy?

- A. Microsoft System Center Data Protection Manager
- B. Windows Backup

- C. the backup-spfarm cmdlet and Task Scheduler
- D. backups from Central Administration

**Correct Answer: C**

**Section: Case 12**

**Explanation**

**Explanation/Reference:**

Explanation:

Task Scheduler

-----

*You are a SharePoint administrator for Fabrikam, Inc.*

*The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.*

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to ensure that ProjectSite.wsp is the only template used to create collaboration sites.

What should you do?

- A. Rename ProjectSite.wsp as Default.wsp.
- B. Deploy ProjectSite.wsp to the root site collection.
- C. Modify the Subsite Template settings for the collaboration environment.
- D. Deactivate the SharePoint Server Publishing feature.

**Correct Answer: C**

**Section: Case 12**

**Explanation**

**Explanation/Reference:**

Explanation:

Subsite Template settings

## **QUESTION 66**

*Topic 13, Fourth Coffee*

### **Current Environment**

*Smart cards are deployed in the organization.*

*The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2.*

*The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups.*

*You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.*

### **Technical Requirements**

*Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- *All user search results must display a thumbnail preview.*
- *The server farm must be available if a single SQL server fails.*
- *The server farm must be available during server patch maintenance.*
- *Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.*

### **Business Requirements**

*Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:*

- *A separate Service Level Agreement (SLA) must be provided for each office.*
- *Database administrators must be able to restore all the content of one office without affecting the content of the other offices.*

### **Security Requirement**

*All users must authenticate to the SharePoint server farm by using smart cards.*

---

---

You are a SharePoint administrator for Fourth Coffee.

The company has 40 offices.

You need to implement an authentication solution that meets the company's security requirements.

What should you do?

- A. Create a new Web application zone and create a new ISAPI filter.
- B. Create a new Web application zone and create an auto-enrollment policy for certificates.
- C. Enable SSL and configure certificate mapping.
- D. Enable SSL and create a new ISAPI filter.

**Correct Answer: C**

#### **Business Requirements**

*Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:*

- *A separate Service Level Agreement (SLA) must be provided for each office.*
- *Database administrators must be able to restore all the content of one office without affecting the content of the other offices.*

#### **Security Requirement**

*All users must authenticate to the SharePoint server farm by using smart cards.*

---

---

You are a SharePoint administrator for Fourth Coffee.

The company has 40 offices.

You need to identify the minimum number of servers required for the planned deployment of SharePoint Server 2010.

How many servers should you identify?

- A. 4
- B. 3
- C. 5
- D. 6

**Correct Answer: A**

**Section: Case 13**

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 69**

*Topic 13, Fourth Coffee*

#### **Current Environment**

*Smart cards are deployed in the organization.*

*The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2.*

*The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups.*

*You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.*

#### **Technical Requirements**

*Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:*

- All user search results must display a thumbnail preview.*
- The server farm must be available if a single SQL server fails.*
- The server farm must be available during server patch maintenance.*
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.*

#### **Business Requirements**

*Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:*

- A separate Service Level Agreement (SLA) must be provided for each office.*
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.*

#### **Security Requirement**

*All users must authenticate to the SharePoint server farm by using smart cards.*

---

---

You are a SharePoint administrator for Fourth Coffee.

The company has 40 offices.

You need to recommend a database solution that meets the company's technical requirements.

Which database solution should you recommend?

- A. encryption
- B. mirroring
- C. partitioning
- D. snapshots

**Correct Answer: B**

**Section: Case 13**

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 70**

*Topic 14, Wingtip Toys*

#### **Current Environment**

*You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO).*

*You plan to upgrade the server farm to SharePoint Server 2010.*

#### **SharePoint Server 2007 Configurations**

*The SharePoint Server 2007 environment contains the servers configured as shown in the following table.*

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2003 (64-bit)	Index
Server4	Windows Server 2003 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

*Servers runs Microsoft SQL Server 2005 (64-bit).*

#### **Business Requirements**

*Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:*

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

### **Taxonomy Requirements**

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

### **Technical Requirements**

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

### **Security Requirements**

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

### **User Requirements**

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
  - New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.
- 
- 

You are a SharePoint administrator for Wingtip Toys.

The company has a main office and 10 distribution centers. The main office is located in Miami.

The company has 36 departments. Each department has a department manager.

You need to recommend which SharePoint Server 2010 feature meets the technical requirements of the distribution centers.

Which feature should you recommend?

- A. the Application Registry Service
- B. the enterprise site collection feature
- C. the Content Type Syndication Hub
- D. the Publishing Infrastructure

**Correct Answer: D**

**Section: Case 14**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 71**

Topic 14, Wingtip Toys

**Current Environment**

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO).

You plan to upgrade the server farm to SharePoint Server 2010.

**SharePoint Server 2007 Configurations**

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2003 (64-bit)	Index
Server4	Windows Server 2003 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Servers runs Microsoft SQL Server 2005 (64-bit).

**Business Requirements**

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

**Taxonomy Requirements**

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

**Technical Requirements**

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

## Security Requirements

*Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:*

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

## User Requirements

*Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:*

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
  - New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.
- 
- 

You need to recommend a search solution that meets the company's user requirements. You must minimize the amount of effort required to administer a search.

What should you include in the solution?

- A.
  - two query servers
  - one crawl server
  - one mirrored index partition
  - two property databases
  - one crawl database
- B.
  - two query servers
  - two crawl servers
  - two index partitions
  - one mirrored property database
  - one mirrored crawl database
- C.
  - two query servers
  - two crawl servers
  - one mirrored index partition
  - one mirrored property database
  - one mirrored crawl database
- D.
  - two query servers
  - two crawl servers
  - one mirrored index partition
  - two property databases
  - two crawl databases

**Correct Answer: B**

## QUESTION 72

*Topic 14, Wingtip Toys*

## Current Environment

*You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO).*

*You plan to upgrade the server farm to SharePoint Server 2010.*

## SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2003 (64-bit)	Index
Server4	Windows Server 2003 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Servers runs Microsoft SQL Server 2005 (64-bit).

### Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

- Each department must have a separate workspace.
- All taxonomies must be available to all authenticated users.
- Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

### Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:

- Taxonomies must not be replicated.
- All legal documents must be maintained in a dedicated taxonomy for the legal department.
- All financial documents must be maintained in a dedicated taxonomy for the financial department.
- All other company documents must be maintained in a dedicated taxonomy named Corporate.

### Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:

- You must be able to monitor all performance counters and Windows events.
- A monitoring and alerting solution must be available for all servers in the farm.
- Page and output caching must be available for all users in the distribution centers.

### Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:

- Only a user named User1 must be able to manage the corporate taxonomy.
- The financial and legal departments must be able to manage only their respective department taxonomies.

### User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:

- Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.
- New content must be included in search results within 30 minutes of being added to the SharePoint Server

2010 servers. The indexing of new content must continue if a crawl server fails.

---

You are a SharePoint administrator for Wingtip Toys.

The company has a main office and 10 distribution centers. The main office is located in Miami.

The company has 36 departments. Each department has a department manager.

You need to plan a solution that meets the company's taxonomy requirements. You must ensure that the taxonomy for the legal documents is isolated.

What should you include in the solution?

- A. multiple Site Collection policies
- B. multiple Managed Metadata Service applications
- C. a Legal site collection
- D. a Web application zone

**Correct Answer: B**

#### **QUESTION 76**

You are the administrator for a SharePoint 2010 farm.

You plan to deploy a Web Part as a sandbox solution in a production environment.

You need to identify the highest degree of isolation.

What should you do? (Choose the best answer.)

- A. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use remote load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use local load balancing and run sandboxed solutions only on specific servers.

**Correct Answer: C**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

Answer: You can increase the isolation of sandboxed solutions by using remote load balancing and by running the sandboxed solutions service only on specific servers. In a production environment, we recommend that you use remote load balancing and dedicate a separate server to running sandboxed solutions. For information about how to decide which load-balancing scheme to use, see Plan to load balance sandboxed solution code in Plan sandboxed solutions (SharePoint Server 2010). ding

#### **QUESTION 77**

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You plan to deploy a sandbox solution in a production environment.

You need to identify the highest degree of isolation.

What should you do? (Choose the best answer.)

- A. Use local load balancing and run sandboxed solutions only on specific servers.

- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use remote load balancing and dedicate a separate server to run sandboxed solutions.

#### **QUESTION 81**

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff.

The network contains a single Active Directory domain.

You plan to deploy SharePoint Server 2010 to support both offices.

You need to recommend a solution that meets the following requirements:

- Network traffic across the WAN link must be minimized.
- All documents must be stored on servers located in the office where the documents were created.
- SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. a server farm in each office that has a Web server located in each office
- B. a single server farm that uses two site collections and a Web server in each office
- C. a server farm in each office and a search federation between the farms
- D. a single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices

### **QUESTION 84**

You have a perimeter network and an internal network.

You plan to use SharePoint Server 2010 to host the company's public Web site.

You need to recommend a solution for the site that meets the following requirements:

- Content data must be stored inside the internal network.
- The number of servers must be minimized.

What should you include in the solution?

- A.
  - Deploy a Web server in the perimeter network.
  - Create a new Active Directory domain in the perimeter network.
  - Deploy a Microsoft SQL Server server in the internal network.
- B.
  - Deploy a Web server in the perimeter network.
  - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
  - Deploy a Microsoft SQL Server server in the internal network.
- C.
  - Deploy a Web server in the perimeter network.
  - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
  - Deploy a Microsoft SQL Server server in the perimeter network.

- D. · Deploy a Web server in the perimeter network.  
· Join the Web server to the internal Active Directory domain.  
· Deploy a Microsoft SQL Server server in the internal network.

  - A single application server that has all other service components
  - A first database server that contains Search databases
  - A second database server that contains all other SharePoint databases
- C.
  - A first web server that does not have the Query component
  - A second web server that does not have the Query component
  - A third web server that has the Query component
  - A first application server that has the query and crawl component
  - A second application server that has all other application server components
  - A first database server that contains Search databases
  - A second database server that contains all other SharePoint databases
- D.
  - A first web server that has the Query component
  - A second web server that has the Query component and all other service components
  - A single database server that contains all SharePoint databases

**Correct Answer: B**

#### **QUESTION 87**

You plan to deploy SharePoint Server 2010 and to enable self-service site creation.

You need to recommend a Web application configuration to meet the following requirements:

- Users must be allowed to create site collections.
- Site collections created by Web developers must be deleted manually.
- Site collections created by managers must be deleted automatically if they are not used for 120 days.
- Site collections created by other users must be deleted automatically if they are not used for 60 days.
- The number of site collections must be minimized.

What should you include in the recommendations?

- A. one Web application that contains one site collection and one Web application that contains two site collections
- B. one Web application and one site collection
- C. three Web applications that each contains one site collection
- D. one Web application that contains three site collections

**Correct Answer: C**

Explanation:

#### **QUESTION 88**

You are the administrator for a SharePoint 2010 farm.

You need to design a restore plan for end users of documents to meet the following requirements:

- Each user must be able to recover documents that they have deleted.
- Deleted items must be retained for 30 days.
- End users must be able to permanently delete documents when needed.

What should you do? (Choose the best answer.)

- A.
  - Turn on the first-stage Recycle Bin.
  - Create a Windows Task Schedule for daily backup of sites.
- B.
  - Turn on the first-stage Recycle Bin.
  - Turn off the second-stage Recycle Bin.
- C.
  - Turn on the first-stage Recycle Bin.
  - Use Central Administration to back up and restore sites.
- D.
  - Turn off the first-stage Recycle Bin.
  - Use the Microsoft STSADM command-line tool to perform the backup and restore of sites,

**Correct Answer: B**

#### **QUESTION 89**

You have a SharePoint Server 2010 server farm. The farm contains the servers configured as shown in the following table.

Server name	Server role
Server1	Web
Server2	Web, query, crawl
Server3	Database

You need to ensure that Server2 never crawls SharePoint content through Server1.

What should you create?

- A. an alternate access mapping
- B. a crawl database
- C. a crawl component
- D. an entry in the Hosts file

**Correct Answer: D**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

A dedicated web front end for crawling. You can accomplished this adding the IP and host name of the farm in the hosts file of the index server.

#### **QUESTION 90**

You have a SharePoint Server 2010 server farm. The farm contains two Web servers.

The load between the two Web servers is distributed by using DNS round robin.

You need to ensure that the farm is available for all users if one of the web servers fails.

What should you do?

- A. Implement Windows Network Load Balancing.
- B. Add a new Web server to the farm.
- C. Configure netmask ordering.
- D. Configure alternate access mappings.

**Correct Answer:** A

**QUESTION 93**

You are the administrator for a SharePoint 2010 farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for internal users in the corporate network.

The network also includes separate Active Directory accounts for external users in the perimeter network.

You want to prevent the perimeter network from accessing internal user accounts.

You need to design the extranet farm topology.

Which type of topology should you use? (Choose the best answer.)

- A. Configure a one-way domain trust where the corporate network trusts the perimeter network.
- B. Configure a one-way domain trust where the perimeter network trusts the corporate network.
- C. Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure.
- D. Configure a two-way domain trust.

**Correct Answer: B**

**QUESTION 94**

You have a SharePoint Server 2010 server farm. The farm contains a single Web application.

The Web application contains 500 site collections.

You need to recommend a solution to ensure that a user can manage all of the site collections.

You must achieve this goal while meeting the following requirements:

- Ensure that the user cannot create Web applications.
- Use the minimum amount of administrative effort.

What should you recommend?

- A. Configure a managed account.
- B. Add the user to the Farm Administrators group.
- C. Define a policy for the Web application.
- D. Modify the site collection administrators.

**Correct Answer: C**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

Allowing or denying the ability to create a Web application can be done by using policies.

**QUESTION 95**

You are the administrator for a SharePoint 2010 farm.

You need to implement an enterprise search technology that meets the following requirements:

- Allows users to search people and their expertise.
- Crawls content outside the SharePoint.
- Provides metadata-driven refinement in the top results.
- Provides phonetic searches.
- Provides search email alerts.

Which search technology should you use? (Choose the best answer.)

- A. SharePoint Server 2010 Search
- B. FAST Search Server 2010 for SharePoint
- C. Search Server 2010 Express
- D. User Profile Service

**Correct Answer:** A

**QUESTION 101**

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain a Web application for an intranet site and a Web application for an extranet site.

The intranet will contain the following three content areas:

- Human resources
- Finance
- Operations

The extranet will contain the following two content areas:

- Partners
- Customers

All content databases will be backed up by using Microsoft SQL Server.

You need to recommend the minimum number of site collections required for the farm.

You must ensure that each content area can be restored independently.

How many site collections should you recommend?

- A. 2
- B. 7
- C. 1
- D. 5

**Correct Answer:** D

### **QUESTION 104**

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do? (Choose the best answer.)

- A. Create a secure store application for the document types and a managed property that references the secure store.  
Add the new application to the search refinement panel definition.
- B. Create a new list that includes a column to store the document type.  
Add a lookup to this list in the document content type.  
Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.
- C. Create a choice column in the document content type.  
Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.
- D. Create a managed metadata term set for document types and include the managed metadata in the document content type. Add the new column to the search refinement panel definition.

**Correct Answer: C**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 108**

You are planning a backup strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

The farm contains two web applications named WebApp1 and WebApp2.  
WebApp1 contains two site collections named SiteCollection1 and SiteCollection2.  
WebApp2 contains a site collection named SiteCollection3.

You need to recommend a backup strategy that provides the ability to restore WebApp1 independently from WebApp2.

What should you include in the recommendation?

- A. Microsoft System Center Data Protection Manager 2010 backups
- B. Windows Server Backup backups
- C. SharePoint backups
- D. Microsoft SQL Server database backups

**Correct Answer: C**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 109**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to use Remote BLOB Storage (RBS).

You need to recommend a backup strategy that will include the BLOB files in the backup. The solution must minimize costs.

What should you include in the recommendation?

- A. Microsoft System Center Data Protection Manager
- B. Microsoft SQL Server database mirroring that uses FILESTREAM
- C. Microsoft SQL Server database backups
- D. Microsoft SharePoint Server backups

**Correct Answer: D**

#### **QUESTION 110**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You also have a public site that is hosted on Microsoft SharePoint Online.

You need to recommend a search solution to meet the following requirements:

- Provide users with the ability to search the SharePoint Online site and SharePoint on-premises simultaneously.
- Provide search results from SharePoint Online and SharePoint on-premises in a single Web Part.

What should you include in the recommendation?

- A. SharePoint Search Federation
- B. a content source
- C. search scopes
- D. a crawl rule

**Correct Answer: A**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

Search is one area which has some integration capabilities. Though the integration is not ideal, as we can't share the relevance of the search results between the two environments. But what we can do is to have either two search boxes, one for on-premise content and one for the online content, or use federated search. With **federated search** you can do one search query, but get two separated results from two different content sources showing up in two separate result sets. Below is a screenshot of search results from SharePoint and search results from Bing.

#### **QUESTION 111**

You are planning the deployment of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

The farm will have the Excel Services service application and the Managed Metadata Service service application deployed.

You need to identify the minimum number of servers that must be purchased to meet the following requirements:

- The service applications must be load balanced.
- Hardware and software costs must be minimized.
- Site collections must be available if a single server fails.
- Microsoft SQL Server must not be installed on any front-end Web servers.

How many servers should you identify?

- A. 3
- B. 4
- C. 6
- D. 5

**Correct Answer: B**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 112**

You are planning the taxonomy of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

- The legal department will require a list view threshold of 1,000 items.
- The accounting department will require a list view threshold of 2,000 items.
- The manufacturing department will require a list view threshold of 1,000 items.

You need to identify the minimum number of web applications and site collections that must be created to meet the requirements.

How many web applications and site collections should you identify?

- A. Three web applications and three site collections
- B. One web application and three site collections
- C. Two web applications and two site collections
- D. One web application and two site collections

**Correct Answer: C**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

Threshold is set per webapplication

#### **QUESTION 113**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to create document repository sites for the sales department and the marketing department.

You identify the following requirements:

- Files that are larger than 5 MB and are uploaded by users in the sales department must be stored in Remote BLOB Storage (RBS). All others files uploaded by the sales users must be stored in a Microsoft SQL Server database.
- All files uploaded by users in the marketing department must be stored in a SQL Server database.

You need to recommend the minimum number of web applications, site collections, and content databases that must be created to meet the requirements.

What should you recommend?

- A. Two web applications and two site collections in two content databases
- B. One web application and two site collections in one content database
- C. One web application and one site collection in one content database
- D. One web application and two site collections in two content databases

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to use InfoPath Forms Services.

You need to recommend which service application must be deployed to the farm.

Which service application should you recommend?

- A. State Service
- B. Managed Metadata Service
- C. Business Data Connectivity
- D. Application Registry Service

**Correct Answer: A**

**Section: Various**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 117**

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm. The farm contains four servers. The servers are configured as shown in the following table.

Server name	Server operating system
APP1	32-bit version of Windows Server 2008 Enterprise
SQL1	64-bit version of Windows Server 2003 Enterprise and 64-bit version of Microsoft SQL Server 2005 Service Pack 3 (SP3)
WFE1	64-bit version of Windows Server 2008 Enterprise
WFE2	64-bit version of Windows Server 2003 Enterprise

You plan to perform an in-place upgrade of the farm to SharePoint Server 2010 Service Pack 1 (SP1).

You need to identify which software must be upgraded before you perform the upgrade.

Which software should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. the operating system on APP1
- B. the operating system on SQL1
- C. the operating system on WFE2
- D. SQL Server 2005 SP3 on SQL1
- E. the operating system on WFE1

**Correct Answer: AC**

#### **QUESTION 126**

You are the administrator for a SharePoint 2010 farm. The farm uses the user profile service to synchronize user profiles of employees from Active Directory. Your company stores contact information of employees in a separate Microsoft SQL Server database.

Currently, user profiles do not contain contact information of all employees.

You need to design a solution that will synchronize contact information of employees from the SQL database into user profiles.

What should you do? (Choose the best answer.)

- A. Create a Business Connectivity Services (BCS) external content type in Microsoft Visual Studio 2010 connected to the SQL database.  
Then, configure the user profile service to import BCS data, and start a full import.
- B. Use the managed metadata service to create a term set for the employee contact fields.  
Then, configure the user profile service to use this term set, and start a full import.
- C. Run the following SharePoint Management PowerShell commands:  
\$Model = Get-SPBusinessDataCatalogMetadataObject -BdcObjectType "Model" -Name "ContosoModel" -ServiceConext http://contoso  
Export-SPBusinessDataCatalogModel -Identity \$Model -Path "C:\folder\model.bdcmodel"
- D. Use Microsoft Visual Studio 2010 to create a timer job that synchronizes data between the SQL database and profile store.
- E. Create a Business Connectivity Services (BCS) external content type in SharePoint Designer 2010 connected to the SQL database.

Then, configure the user profile service to import BCS data, and start a full import.

**Correct Answer:** E

#### **QUESTION 127**

Your company uses Microsoft SharePoint Online.

You have a private site collection named Site 1.

You need to provide anonymous access to several documents and webpages. The solution must use the minimum amount of administrative effort.

What should you do?

- A. Create a permission policy
- B. Modify the anonymous policy of the Site1 web application
- C. Modify the user permission of the Site1 web application
- D. Create a public website site collection

**Correct Answer:** D

**Section:** Various

**Explanation**

**Explanation/Reference:**

It's possible to grant access on an existing site collection to external users, but those will always be authenticated. You cannot change an existing private collection to become public,

#### **QUESTION 128**

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend a solution for My Site to meet the following requirements:

- The My Sites of users in the sales department must have URLs that start with `http://sales.contoso.com/users`.
- All other My sites must have URLs that start with `http://intranet.contoso.com/mysites`.

What should you include in the recommendation?

- A. one User Profile service application and two managed paths
- B. two User Profile service application and two managed paths
- C. two User Profile service application and two managed paths
- D. one User Profile service application and one managed paths

**Correct Answer:** B

**Section:** Various

**Explanation**

**Explanation/Reference:**

MySite URL is a setting on user profile SA level, so setting two URLs will require two service applications. And because both URLs will also require a managed path to deploy the sites to, you need two of those.

#### **QUESTION 129**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm

Several farm solutions are deployed to the farm

You need to recommend a strategy to back up the solution that are deployed to the farm.

Which cmdlet should you include in the recommendation?

- A. Backup-SPContentDatabase
- B. Backup-SPFarm
- C. Backup-SPWeb
- D. Backup-SPConfigurationDatabase

**Correct Answer: B**

**Section: Various**

**Explanation**

**Explanation/Reference:**

#### QUESTION 130

You plan to deploy a PerformancePoint dashboard that will display data from a cube hosted in Microsoft SQL Server Analysis Services.

The following identities are used by services and application pools:

- The claims to Windows Token Service process identity is contoso\C2WTS
- The PerformancePoint application pool identity is contoso\SPPPS
- The Secure Store application pool identity is contoso\SPSSS
- The SQL Server Analysis Service identity is contoso\SQLAS

You need to ensure that when a user connects to the dashboard, the user's credentials are used to connect to the cube.

Which identities should enable for Kerberos constrained delegation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. contoso\C2WTS
- B. contoso\SPPPS
- C. contoso\SPSSS
- D. contoso\SQLAS

**Correct Answer: ABD**

**Section: Various**

**Explanation**

**Explanation/Reference:**

The Kerberos protocol supports two kinds of delegation, **basic** (unconstrained) and **constrained**.

**Basic** Kerberos delegation can cross domain boundaries in a single forest, but cannot cross a forest boundary regardless of trust relationship.

Kerberos **constrained** delegation cannot cross domain or forest boundaries in any scenario.

The account you use for C2WTS also needs to be configured for Constrained Delegation with Protocol Transitioning and needs permissions to delegate to the Services it is required to communicate with (i.e. SQL Server Engine, SQL Server Analysis Services).

The following service applications and products require the C2WTS and Kerberos constrained delegation:

- Excel Services

- PerformancePoint Services
- Visio Services

The following service applications and products are not affected by these requirements, and therefore can use basic delegation, if it is required:

- Business Data Connectivity service and Microsoft Business Connectivity Services
- InfoPath Forms Services
- Access Services
- Microsoft SQL Server Reporting Services (SSRS)
- Microsoft Project Server 2010

The following service application does not allow delegation of client credentials and therefore is not affected by these requirements:

- Microsoft SQL Server PowerPivot for Microsoft SharePoint

### **QUESTION 131**

You company plans to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You are designing a maintenance strategy for the farm

You plan to apply critical Windows updates to the servers in the farm once a month.

You need to recommend a strategy to ensure that the installation of Windows updates will not prevent users from searching for content in SharePoint sites.

What should you include in the recommendation?

- A. multiple Search service applications
- B. multiple crawl databases
- C. multiple host distributions rules
- D. multiple query servers

**Correct Answer: D**

**Section: Various**

**Explanation**

**Explanation/Reference:**

### **QUESTION 132**

You have a SharePoint Server 2007 Service Pack 3 (SP3) server farm.

You plan to migrate the farm to SharePoint Server 2010 Service Pack 1 (SP1) by using the database attach method.

You need to identify which components must be reconfigured manually after the content database are migrated.

Which components should you identify ? (Each correct answer presents part of the solution. Choose all that apply.)

- A. approval workflows
- B. permission policies for the web applications
- C. Web Parts that contain custom code
- D. outgoing email settings
- E. site collection permissions

**Correct Answer:** ABCD

**Section:** Various

**Explanation**

**Explanation/Reference:**

**QUESTION 133**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to create a PerformancePoint dashboard in WebApp1. The dashboard will retrieve data from a SharePoint Online site.

You need to recommend a solution to ensure that the data is always retrieved from SharePoint Online by using an account named [service@contoso.onmicrosoft.com](mailto:service@contoso.onmicrosoft.com).

The solution must minimize the amount of custom development.

What should you include in the recommendation?

- A. Remote BLOB Storage (RBS)
- B. cross-firewall access zones
- C. Network Access Protection (NAP)
- D. Network Load Balancing (NLB)
- E. the Access Services service application
- F. a BLOB cache
- G. service application groups
- H. the Secure Store Service service application
- I. user policies
- J. Active Directory Federation Services (AD FS)
- K. Information Rights Management (IRM)
- L. SharePoint Health Analyzer
- M. alternate access mappings
- N. Microsoft Visual Studio 2010
- O. managed accounts
- P. an ASP.NET Membership Database

**Correct Answer:** O

**Section:** Large multiple choice

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 134**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content. The marketing department plans to upload large video files to the sites in WebApp2.

You need to recommend a solution to minimize the size of the content databases for WebApp2.

What should you include in the recommendation?

- A. an ASP.NET Membership Database
- B. Microsoft Visual Studio 2010
- C. a BLOB cache
- D. Active Directory Federation Services (AD FS)
- E. service application groups
- F. the Secure Store Service service application
- G. user policies
- H. cross-firewall access zones
- I. SharePoint Health Analyzer
- J. Network Access Protection (NAP)
- K. alternate access mappings
- L. Information Rights Management (IRM)
- M. managed accounts
- N. the Access Services service application
- O. Network Load Balancing (NLB)
- P. Remote BLOB Storage (RBS)

**Correct Answer: P**

**Section: Large multiple choice**

**Explanation/Reference:**

Explanation:

#### **QUESTION 135**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You need to simulate concurrent user connections to the internal farm. What should you include in the recommendation?

- A. Network Load Balancing (NLB)

- B. alternate access mappings
- C. Information Rights Management (IRM)
- D. user policies
- E. SharePoint Health Analyzer
- F. Remote BLOB Storage (RBS)
- G. an ASP.NET Membership Database
- H. the Access Services service application
- I. Network Access Protection (NAP)
- J. the Secure Store Service service application
- K. Microsoft Visual Studio 2010
- L. cross-firewall access zones
- M. managed accounts

Explanation:

#### **QUESTION 136**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content. You need to recommend a solution to authenticate the external users by using the internal Active Directory infrastructure.

What should you include in the recommendation?

- A. Network Access Protection (NAP)
- B. Active Directory Federation Services (AD FS)
- C. The Access Services service application
- D. Network Load Balancing (NLB)
- E. Microsoft Visual Studio 2010
- F. an ASP.NET Membership Database
- G. Remote BLOB Storage (RBS)
- H. the Secure Store Service service application
- I. Information Rights Management (IRM)
- J. a BLOB cache
- K. managed accounts
- L. service application groups
- M. SharePoint Health Analyzer

- N. alternate access mappings
- O. User policies
- P. cross-firewall access zones

**Correct Answer: B**

#### **QUESTION 137**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to implement SSL in WebApp1.

You need to recommend a solution to ensure that the internal users can access WebApp1 by using HTTP and HTTPS.

What should you include in the recommendation?

- A. service application groups
- B. Remote BLOB Storage (RBS)
- C. the Access Services service application
- D. Microsoft Visual Studio 2010
- E. the Secure Store Service service application
- F. Information Rights Management (IRM)
- G. user policies
- H. managed accounts
- I. cross-firewall access zones
- J. Network Access Protection (NAP)
- K. SharePoint Health Analyzer
- L. a BLOB cache
- M. Active Directory Federation Services (AD FS)
- N. Network Load Balancing (NLB)
- O. an ASP.NET Membership Database
- P. alternate access mappings

**Correct Answer: P**

#### **QUESTION 138**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

Corporate security policy states that the password of each user account must be changed every three months.

You need to recommend a technology to ensure that the internal farm remains operational after the passwords change.

What should you include in the recommendation?

- A. Microsoft Visual Studio 2010
- B. the Access Services service application
- C. the Secure Store Service service application
- D. a BLOB cache
- E. Network Load Balancing (NLB)
- F. Information Rights Management (IRM)
- G. managed accounts
- H. SharePoint Health Analyzer
- I. Remote BLOB Storage (RBS)
- J. alternate access mappings
- K. Network Access Protection (NAP)
- L. Active Directory Federation Services (AD FS)
- M. service application groups
- N. an ASP.NET Membership Database
- O. cross-firewall access zones
- P. user policies

#### **QUESTION 139**

You are the administrator for a SharePoint 2010 farm.

You need to grant the Self-Service Site Creation permission to users to create their own sites for the [www.adatum.com/win7](http://www.adatum.com/win7) web application. You also need to ensure that users provide a secondary contact.

What should you do?

(To answer, configure the appropriate option or options in the dialog box in the answer area.)

**Hot Area:**

**Work Area**

Web Application:

When you enable Self-Service Site Creation, an announcement will be added to the Announcements list on the home page of the top-level Web site. The announcement will provide a link to the site creation page (sccsignup.aspx in the \_layouts directory).

☐ On

☐ Off

☐ Require secondary contact

OK Cancel

**Correct Answer:**

**Work Area**

Web Application:

When you enable Self-Service Site Creation, an announcement will be added to the Announcements list on the home page of the top-level Web site. The announcement will provide a link to the site creation page (sccsignup.aspx in the \_layouts directory).

☒ On

☐ Off

☒ Require secondary contact

OK Cancel

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

Select "Win7" in the Web Application drop-down box.  
Select the "On" button.  
Tick the "Require Secondary Contact" checkbox.

**QUESTION 140**

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Available actions (left):

- Create a managed metadata term set for document types.
- Add the new column to the search refinement panel definition.
- Create a choice column in the document content type.
- Create a new list and include a lookup in the document content type.
- Include the managed metadata in the document content type.
- Add the secure store application to the search refinement panel definition.

Answer area (right):

**Correct Answer:**

Answer area (right):

- Create a managed metadata term set for document types.
- Include the managed metadata in the document content type.
- Add the new column to the search refinement panel definition.

Available actions (left):

- Create a choice column in the document content type.
- Create a new list and include a lookup in the document content type.
- Add the secure store application to the search refinement panel definition.

**QUESTION 141**

You are the administrator for a SharePoint 2010 farm.

The farm topology is as shown in the following table.

Servers	Roles
Server A	<ul style="list-style-type: none"><li>• Web Front End</li><li>• All service applications</li></ul>
Server B	<ul style="list-style-type: none"><li>• Microsoft SQL Server 2008</li></ul>

You want to improve the performance of the search.

You need to add an application server named Server C.

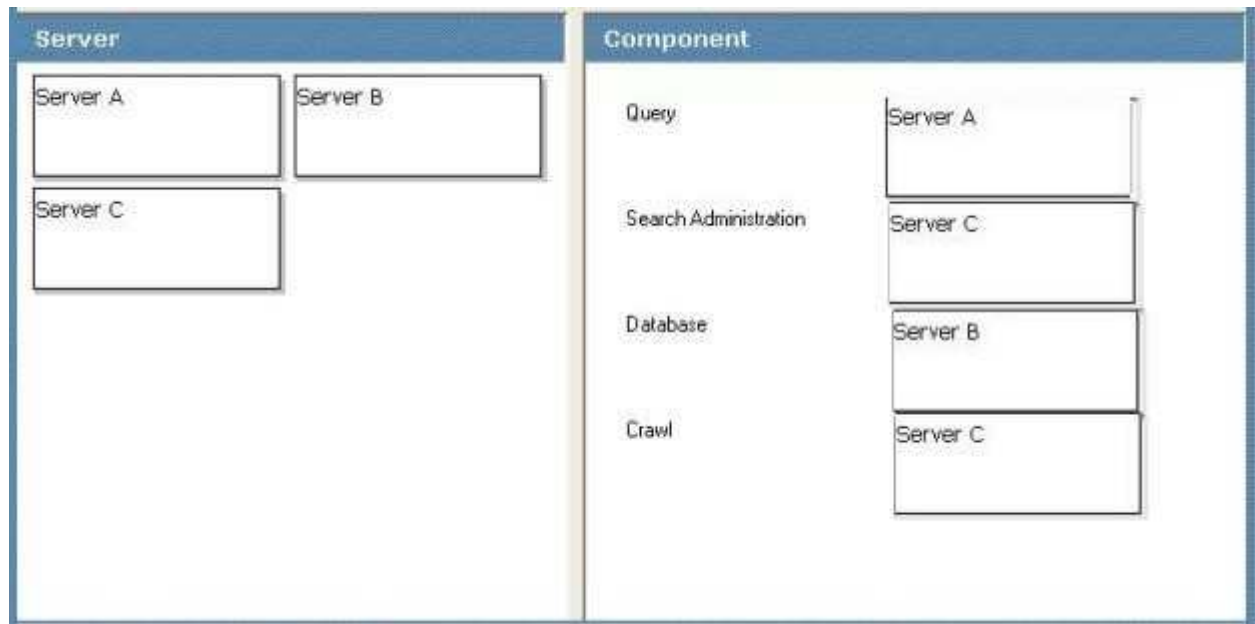

Which component should you place on each of the three servers?

(To answer, drag the appropriate server or server to the correct location or locations in the answer area.)

**Select and Place:**

Server		Component	
Server A	Server B	Query	
Server C		Search Administration	
		Database	
		Crawl	

**Correct Answer:**

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

**QUESTION 142**

You are the administrator for a SharePoint 2010 farm. You use Kerberos authentication and dedicated service accounts for each SharePoint 2010 service.

You want to use Microsoft Excel Services and Microsoft Visio Services service applications to analyze Line-of-Business (LOB) data located on a Microsoft SQL Server in the same domain.

Microsoft SQL Server Reporting Services (SSRS) in SharePoint Integrated mode will be used to report data located on another domain in the forest.

Which type of delegation should you use for the service accounts?

(To answer, drag the appropriate delegation type or types to the correct location or locations in the answer area.)

**Select and Place:**

Delegation	Service Accounts
Constrained Delegation	Excel Services
Basic Delegation	c2WTS
	Visio Services
	SSRS

**Correct Answer:**

Delegation	Service Accounts
Constrained Delegation	Excel Services Constrained Delegation
Basic Delegation	c2WTS Constrained Delegation
	Visio Services Constrained Delegation
	SSRS Basic Delegation

**Explanation**

**Explanation/Reference:**

**QUESTION 144**

You are the administrator for a SharePoint 2010 farm.

You need to move the content database from a Microsoft SQL Server named Server1 to an SQL Server named Server2 within the farm.

What should you do?

(To answer, move the appropriate actions from the list of actions in the answer area and arrange them in the correct order.)

**Select and Place:**

Back up the database in Server1.

Restore the database in Server2.

Detach the database from Server1.

Remove the content database from the web application.

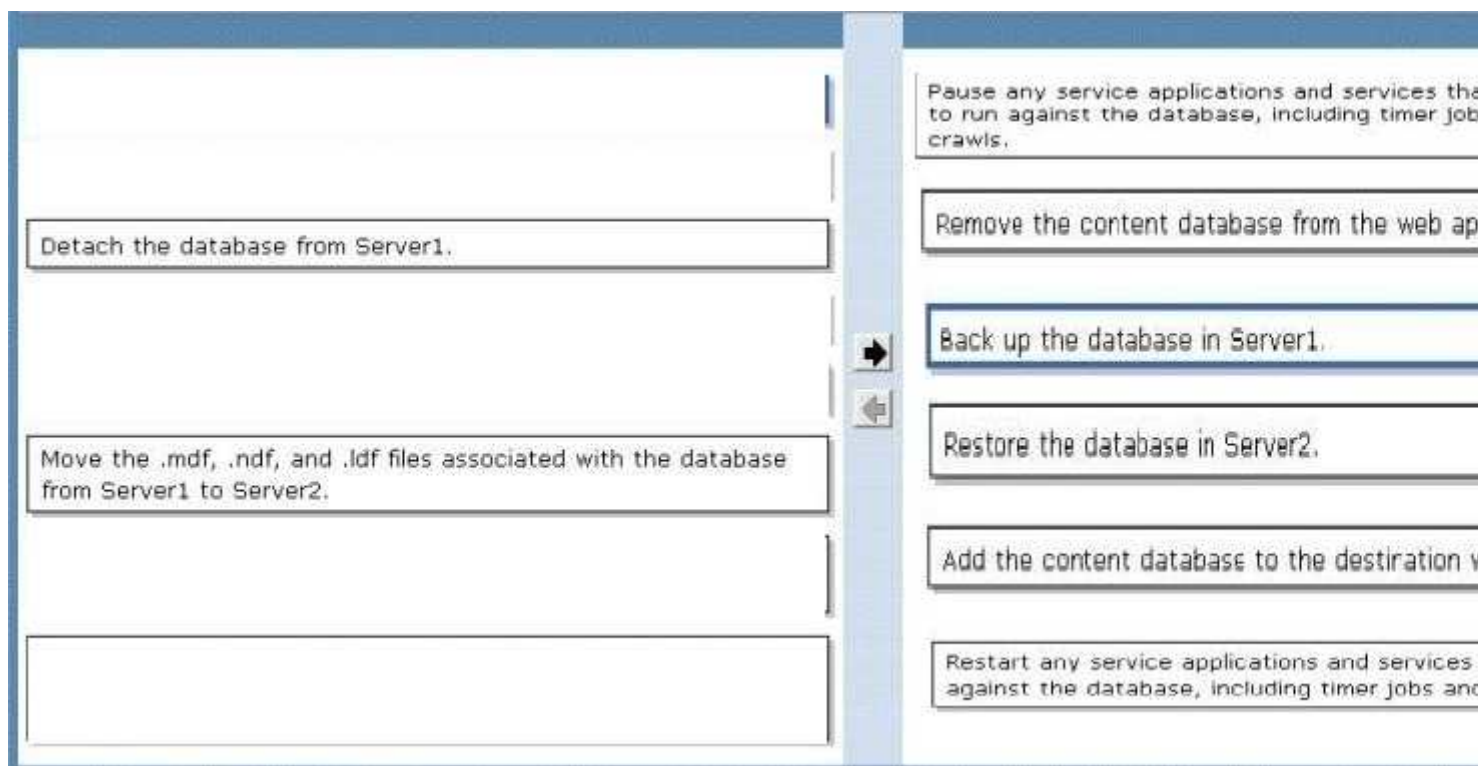

Add the content database to the destination web application.

Move the .mdf, .ndf, and .ldf files associated with the database from Server1 to Server2.

Restart any service applications and services that must be run against the database, including timer jobs and search crawls.

Pause any service applications and services that might attempt to run against the database, including timer jobs and search crawls.

**Correct Answer:**

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

**QUESTION 145**

You are the administrator for a SharePoint 2010 farm.

You create a top-level site named SiteA that uses Windows authentication and the default permission set.

You need to design the security schema for the following taxonomy:

Securable object	Description
SiteA/SubsiteA	Sensitive group
SiteA/SubsiteA/ListA	Non-sensitive data
SiteA/SubsiteA/LibraryA	Non-sensitive documents, but has one or more sensitive items
SiteA/SubsiteB	Group shared project information
SiteA/SubsiteB/ListB	Non-sensitive data, but has one or more sensitive items
SiteA/SubsiteB/LibraryB	Non-sensitive documents, but has a special folder that contains sensitive items

Which type of permissions should you implement?

(To answer, drag the appropriate permission or permissions to the correct location or locations in the answer area.)

**Select and Place:**

Source Heading	Securable object	
Inherited	SiteA/SubsiteA	
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA	
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA	
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB	
	SiteA/SubsiteB/ListB	
	SiteA/SubsiteB/LibraryB	

**Correct Answer:**

Source Heading	Securable object	
Inherited	SiteA/SubsiteA	Inherited
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA	Unique, has Copy permissions from SiteA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA	Inherited, has unique permissions at the item level
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB	Inherited
	SiteA/SubsiteB/ListB	Inherited, has unique permissions at the item level
	SiteA/SubsiteB/LibraryB	Inherited, has unique permissions at the folder and item levels

**QUESTION 148**

You are the administrator for a SharePoint 2010 farm.

You need to deploy a custom site to the top site of a site collection on the production farm.

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the

correct order.)

**Select and Place:**

The screenshot shows a SharePoint 2010 interface with a list of actions on the left and a sequence diagram on the right. The actions are:

- Upload and activate the WSP file.
- Save the custom site as a site template.
- Create a site collection by using an empty site.
- Create a site collection by using a blank site definition.
- Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.
- Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

The sequence diagram on the right shows a flow from top to bottom, with a right arrow and a left arrow indicating the direction of the sequence.

**Correct Answer:**

The screenshot shows the same SharePoint 2010 interface as above, but with the actions rearranged to show the correct sequence. The actions are:

- Save the custom site as a site template.
- Create a site collection by using an empty site.
- Upload and activate the WSP file.
- Create a site collection by using a blank site definition.
- Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.
- Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

The sequence diagram on the right shows a flow from top to bottom, with a right arrow and a left arrow indicating the direction of the sequence.

### QUESTION 150

You are the administrator for a SharePoint 2010 farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

- High availability of the server
- Maximum response time

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

#### Select and Place:

Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.

Install SharePoint 2010 Enterprise on all intended servers in the farm by using the **/Complete** farm option.

Install a single application server that has all service components.

Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.

Set up the farm to include the following components:

- A single application server that has all service components except search
- A connection to a database server that contains Search databases
- A second database server that contains the SharePoint Central Administration database

**Correct Answer:**

The screenshot shows a SharePoint 2010 installation wizard interface. On the left, there is a list of actions to be performed, each in a box. On the right, there is a summary of the actions to be performed, including a list of components to be included in the farm.

Actions to be performed (from top to bottom):

- Install 64-bit SharePoint 2010 in a Microsoft SQL Server database cluster.
- Install SharePoint 2010 Enterprise on all intermediate servers in the farm by using the **/Complete** farm option.
- Set up the farm to include the following components:
  - A single application server that has all services except search
  - A connection to a database server that contains the Central Administration database
  - A second database server that contains the Central Administration database

**Explanation**

**Explanation/Reference:**

#### QUESTION 152

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm.

The farm contains a server named Server1.  
Server1 has Microsoft SQL Server 2008 R2 installed.

You deploy a new server named Server2.

You install SQL Server 2008 R2 and SharePoint Server 2010 Service Pack 1 (SP1) on Server2.

You plan to migrate from SharePoint Server 2007 SP2 to SharePoint Server 2010 SP1.  
After you complete the migration, you plan to remove Server1 from the network.

You need to plan the migration to meet the following requirements:

- Minimize administrative effort.
- Ensure that users can read content during the migration.
- Prevent the users from modifying or creating new content during the migration.

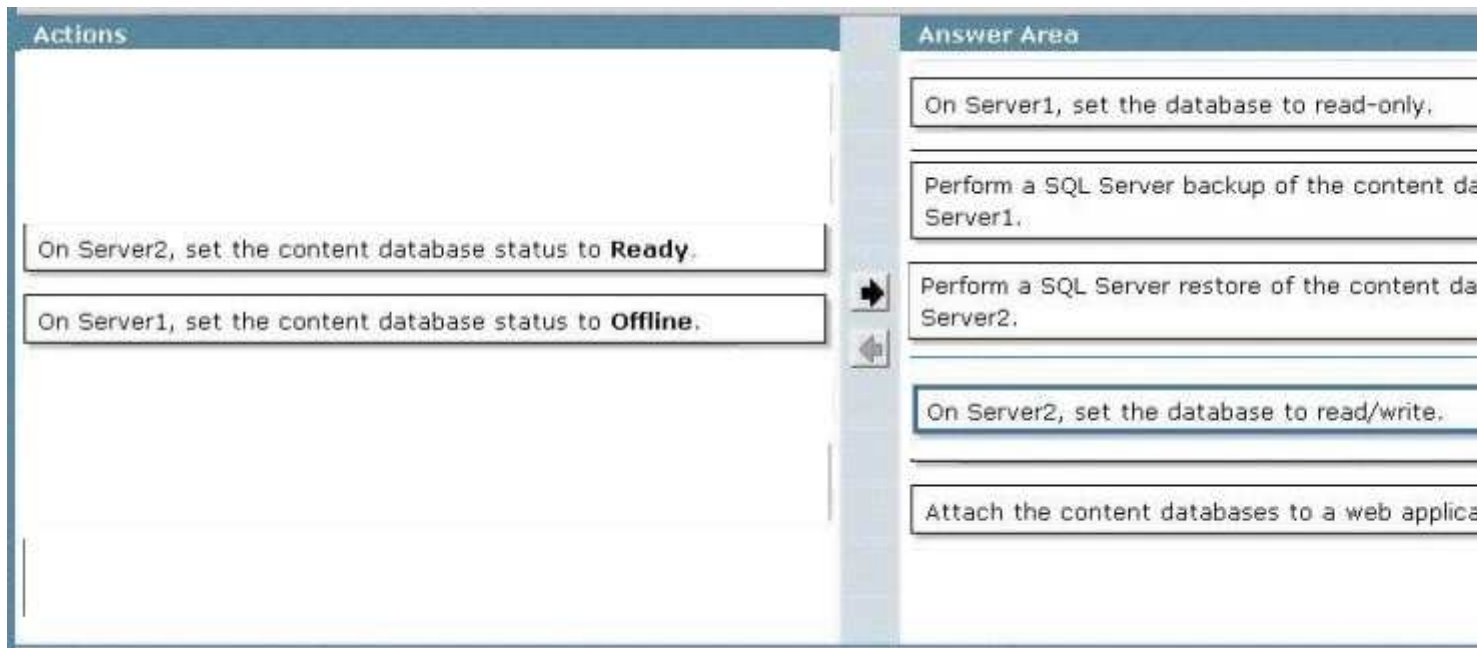

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Actions	Answer Area
On Server2, set the database to read/write.	
On Server1, set the database to read-only.	
On Server2, set the content database status to <b>Ready</b> .	
On Server1, set the content database status to <b>Offline</b> .	
Attach the content databases to a web application on Server2.	
Perform a SQL Server backup of the content databases on Server1.	
Perform a SQL Server restore of the content databases on Server2.	

**Correct Answer:**

**Explanation/Reference:**

**QUESTION 153**

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

- Farm1 will host shared service applications.
- Farm2 will host content for the human resources department. The farm content will be searchable.
- Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

- Server virtualization will not be used.
- Farm1 must host service applications whenever possible.
- The service applications must not run on servers that host webpages for end users.
- The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers should you identify?

(To answer, drag the appropriate number to the correct farm in the answer area.)

**Select and Place:**

Number of Servers				Answer Area	
1	2	4	6	Farm1	<input type="text"/>
				Farm2	<input type="text"/>
				Farm3	<input type="text"/>

**Correct Answer:**

Number of Servers				Answer Area	
1	2	4	6	Farm1	2
				Farm2	4
				Farm3	4

#### QUESTION 154

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

You identify the following requirements for each farm:

- Farm1 will host content and sites for users located in Europe.
- Farm2 will host content and sites for users located in North America.
- Farm3 will be dedicated to hosting shared services for users located in Europe and North America.

You plan to deploy the following service applications for all of the users:

- Excel Services
- User Profile Service
- Managed Metadata Service

You need to recommend to which farm each service application must be deployed. The solution must minimize the number of service applications deployed to each farm. Any services that can be shared must be deployed to Farm3.

Which service applications should you recommend?

(To answer, drag the appropriate service application to the correct farm or farms in the answer area.)

**Select and Place:**

Service Applications	Answer Area		
Excel Services	Farm1	Farm2	Farm3
Managed Metadata Service	Service application	Service application	Service application
User Profile Service	Service application	Service application	Service application
	Service application	Service application	Service application

**Correct Answer:**

Service Applications	Answer Area		
Excel Services	Farm1	Farm2	Farm3
Managed Metadata Service	Excel Services	Excel Services	Excel Services
User Profile Service	Service application	Service application	Managed Metadata Service
	Service application	Service application	User Profile Service

**Explanation/Reference:**

#### QUESTION 155

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You need to modify the search infrastructure to meet the following requirements:

- Users must be able to perform searches that only return results from content that is contained in a specific site.
- When users perform searches, results from both SharePoint and Microsoft Bing must be displayed.

You need to recommend which SharePoint technology must be implemented to meet the requirements.

What should you recommend?

(To answer, drag the appropriate technology to the correct requirement in the answer area.)

**Select and Place:**

Technologies	Answer Area
Audiences	Technology: Users must be able to perform searches that only return results from content that is contained in a specific site.
Managed Properties	Technology: When users perform searches, results from both SharePoint and Microsoft Bing must be displayed.
Search Federation	
Search Scopes	
Term Stores	

**Correct Answer:**

Technologies	Answer Area
Audiences	Search Scopes: Users must be able to perform searches that only return results from content that is contained in a specific site.
Managed Properties	Search Federation: When users perform searches, results from both SharePoint and Microsoft Bing must be displayed.
Term Stores

#### QUESTION 156

Your company is evaluating the development of three custom SharePoint solutions named

Solution1, Solution2, and Solution3. You identify the following requirements for the custom solutions:

- Solution1 will aggregate information from multiple site collections.
- Solution2 will retrieve data from multiple lists in a site. Solution2 must be load balanced between all front-end Web servers.
- Solution3 will contain a workflow created by using Microsoft Visual Studio 2010, The workflow will contain custom code.

You need to recommend which type of solution must be used for each custom solution.

Which type of solutions should you recommend?

(To answer, drag the appropriate solution type to the correct custom solution in the answer area.)

**Select and Place:**

Solution Types	Answer Area
farm solution	Solution1 Solution type
user solution	Solution2 Solution type
	Solution3 Solution type

**Correct Answer:**

Solution Types	Answer Area
farm solution	Solution1 farm solution
user solution	Solution2 user solution
	Solution3 farm solution

**Explanation**

**Explanation/Reference:**

#### QUESTION 157

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

The farm contains an Excel Services service application.  
 You plan to display a Microsoft Excel file in a Web Part.

The Excel file will contain the following:

- Data from a Microsoft SQL Server database
- Custom calculations written in Microsoft Visual Studio

You need to identify which Excel Services configuration must be configured to display the Excel file.

What should you configure?

(To answer, drag the appropriate configuration to the correct location in the answer area.)

**Select and Place:**

Configurations	Answer Area
a trusted data connection library	Data from a SQL Server database
a trusted data provider	Custom calculations written in Visual Studio
a trusted file location	
a user-defined function assembly	

**Correct Answer:**

Configurations	Answer Area
a trusted data connection library	Data from a SQL Server database
a trusted data provider	Custom calculations written in Visual Studio
	a trusted file location
	a user-defined function assembly

#### QUESTION 158

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You are planning the administrative model for search.

You identify different groups of users who will perform the following tasks:

- Manage authoritative pages.
- Manage shared search scopes.

You need to identify from which location you must configure permissions to ensure that the users can perform the required tasks. The solution must minimize the number of permissions assigned to each user.

Which locations should you identify?

(To answer, drag the appropriate task to the correct location in the answer area.)

**Select and Place:**

Locations	Answer Area
Search service application	Manage authoritative pages. Location
site collection	Manage shared search scopes. Location
web application	

**Correct Answer:**

Locations	Answer Area
	Manage authoritative pages. web application
site collection	Manage shared search scopes. Search service application

**Explanation**

**Explanation/Reference:**

#### QUESTION 159

You are planning the deployment of SharePoint Server 2010 Service Pack (SP1).

You need to recommend the minimum editions of SharePoint that must be deployed to meet the following requirements:

- Display data from Microsoft SQL Server databases in a SharePoint list.
- Synchronize user profile data between SharePoint and Active Directory.
- Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams by using a web browser.

Which edition should you recommend for each requirement?

(To answer, drag the appropriate edition to the correct requirement in the answer area.)

**Select and Place:**

Editions	Answer Area
SharePoint Foundation 2010	<div> <div>Edition</div> <div>Display data from Microsoft SQL Server databases in a SharePoint list.</div> </div>
SharePoint Server 2010 Enterprise	<div> <div>Edition</div> <div>Synchronize user profile data between SharePoint and Active Directory.</div> </div>
SharePoint Server 2010 Standard	<div> <div>Edition</div> <div>Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.</div> </div>

**Correct Answer:**

Editions	Answer Area
	<div> <div>SharePoint Foundation 2010</div> <div>Display data from Microsoft SQL Server databases in a SharePoint list.</div> </div>
	<div> <div>SharePoint Server 2010 Standard</div> <div>Synchronize user profile data between SharePoint and Active Directory.</div> </div>
	<div> <div>SharePoint Server 2010 Enterprise</div> <div>Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.</div> </div>

#### QUESTION 160

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You need to recommend a monitoring solution to meet the following requirements:

- Monitor the most viewed pages.
- Monitor the search query latency.

The solution must use the minimum amount of administrative effort.

What should you recommend?

(To answer, drag the appropriate monitoring solution to the correct requirement in the answer area.)

**Select and Place:**

Monitoring Solutions	Answer Area
Administrative reports	Monitor the most viewed pages. <input type="button" value="Monitoring solution"/>
Auditing reports	Monitor the search query latency. <input type="button" value="Monitoring solution"/>
SharePoint Health Analyzer	
Web Analytics reports	

**Correct Answer:**

Monitoring Solutions	Answer Area
<input type="text"/>	Monitor the most viewed pages. <input type="text" value="Web Analytics reports"/>
Auditing reports	Monitor the search query latency. <input type="text" value="Administrative reports"/>
SharePoint Health Analyzer	
<input type="text"/>

**Explanation/Reference:**

#### QUESTION 161

You are planning a recovery strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

- A document that a user deleted 15 days ago must be recovered.
- A site collection that was deleted 20 days ago must be recovered.

You need to recommend which component must be used for each requirement. The solution must recover the data in the minimum amount of time.

What should you recommend?

(To answer, drag the appropriate component to the correct requirement in the answer area.)

**Select and Place:**

Components	Answer Area
Microsoft SQL Server backup	A document that a user deleted 15 days ago must be recovered. <input type="text" value="Component"/>
Recycle Bin	
versioning	A site collection that was deleted 20 days ago must be recovered. <input type="text" value="Component"/>

**Correct Answer:**

Components	Answer Area
	A document that a user deleted 15 days ago must be recovered. <input type="text" value="Recycle Bin"/>
versioning	A site collection that was deleted 20 days ago must be recovered. <input type="text" value="Microsoft SQL Server backup"/>

**Explanation/Reference:**

#### QUESTION 162

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms. The farms will be configured as shown in the following table.

Farm name	Farm configuration
Farm1	Dedicated to hosting shared services
Farm2	Dedicated to hosting content for the human resources department
Farm3	Dedicated to hosting content for the finance department

You identify the following deployment requirements:

- Users in the finance department must be able to search for finance content, to manage their user profile, and to use term stores.
- Users in the human resources department must be able to manage their user profile and to view Microsoft

Excel files by using a web browser.

You need to identify which service application or service applications must be deployed to each farm. Any services that can be shared must be deployed to Farm1.

Which service applications should you identify?

(To answer, drag the appropriate service application or service applications to the correct farm in the answer area.)

**Select and Place:**

Service Applications	Answer Area		
Excel Services	<b>Farm1</b>	<b>Farm2</b>	<b>Farm3</b>
	Service application	Service application	Service application
Managed Metadata Service	Service application	Service application	Service application
Search	Service application	Service application	Service application
User Profile Service	Service application	Service application	Service application

**Correct Answer:**

Service Applications	Answer Area		
Excel Services	<b>Farm1</b>	<b>Farm2</b>	<b>Farm3</b>
	Search	Excel Services	Service application
Managed Metadata Service	User Profile Service	Service application	Service application
Search	Managed Metadata Service	Service application	Service application
User Profile Service	Service application	Service application	Service application

**Explanation**

**Explanation/Reference:**

**QUESTION 163**

Your company uses Microsoft SharePoint Online and SharePoint Server 2010 Service Pack (SP1) on-premises.

The corporate usage policy states that SharePoint Online must be used whenever possible. You plan to

implement three sites named Site1, Site2, and Site3.

The sites have the following requirements:

- The users of Site1 must be able to create PerformancePoint dashboards,
- The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
- The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

You need to recommend in which SharePoint environment to create each site.

What should you recommend?

(To answer, drag the appropriate environment to the correct site in the answer area.)

**Select and Place:**

SharePoint Environments	Answer Area
SharePoint on-premises	Environment The users of Site1 must be able to create PerformancePoint dashboards.
SharePoint Online	Environment The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
	Environment The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

**Correct Answer:**

SharePoint Environments	Answer Area
SharePoint on-premises	SharePoint on-premises The users of Site1 must be able to create PerformancePoint dashboards.
SharePoint Online	SharePoint Online The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
	SharePoint Online The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

**QUESTION 164**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. Collection1 contains a content type named CT1.

You need to recommend a content management strategy to meet the following requirements:

- Log the name of each user who opens documents that use CT1.
- Automatically route documents that use CT1 to a document library named Legal.

What should you include in the recommendation?

(To answer, drag the appropriate component to the correct requirement in the answer area.)

**Select and Place:**

Components	Answer Area
an information management policy	<div>Component</div> Log the name of each user who opens documents that use CT1.
Information Rights Management (IRM)	<div>Component</div> Automatically route documents that use CT1 to a document library named Legal.
the Content Type Syndication Hub	
the Record Center	

**Correct Answer:**

Components	Answer Area
	an information management policy Log the name of each user who opens documents that use CT1.
Information Rights Management (IRM)	
the Content Type Syndication Hub	the Record Center Automatically route documents that use CT1 to a document library named Legal.

**Explanation/Reference:**

**QUESTION 165**

You have four SharePoint Server 2007 Service Pack 2 (SP2) server farms. The farms are configured as shown in the following table.

Farm name	Farm servers
Farm1	<ul style="list-style-type: none"> <li>One server that runs Windows Server 2003 x64 and has SharePoint Server installed</li> <li>One server that has Microsoft SQL Server 2008 installed</li> </ul>
Farm2	<ul style="list-style-type: none"> <li>One server that runs Windows Server 2008 x64 and has SharePoint Server installed</li> <li>One server that has Microsoft SQL Server 2005 SP2 installed</li> </ul>
Farm 3	<ul style="list-style-type: none"> <li>One server that runs Windows Server 2008 x64 and has SharePoint Server installed</li> <li>One server that has Microsoft SQL Server 2008 R2 installed</li> </ul>

You plan to migrate each farm to SharePoint Server 2010 Service Pack 1 (SP1).

You need to identify the migration strategy for each farm. The solution must minimize the amount of time required to migrate the farms.

Which migration strategy should you select for each farm?

(To answer, drag the appropriate strategy to the correct farm in the answer area.)

**Select and Place:**

Strategies	Answer Area
database attach	Farm1 Strategy
in-place upgrade	Farm2 Strategy
	Farm3 Strategy

**Correct Answer:**

Strategies	Answer Area
database attach	Farm1 database attach
in-place upgrade	Farm2 database attach
	Farm3 in-place upgrade

## Section: Drag & Drop

### Explanation

#### Explanation/Reference:

You must be running **Service Pack 2 (SP2) of Office SharePoint Server 2007 in a 64-bit Windows Server 2008 environment** to perform an **in-place upgrade** to SharePoint Server 2010. If you are in a server farm environment, you must also be running a **64-bit version of Microsoft SQL Server 2008 R2, SQL Server 2008 with Service Pack 1 (SP1) and Cumulative Update 2, or SQL Server 2005 with SP3 and Cumulative Update 3.**

#### QUESTION 166

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

Server name	Server configuration
SQL1	Microsoft SQL Server
WFE1	Front-end Web server

You need to add an additional server to the farm. The new server will host the following service applications:

- User Profile Service
- Excel Calculation Services
- Managed Metadata Web Service

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Actions		Answer Area
Create a new web application.		
Configure server name mappings.		
Run the Farm Configuration Wizard.	➔	
Configure alternate access mappings.	➔	
Run the SharePoint Products Configuration Wizard.		
Install SharePoint Server 2010 SP1 on a new server.		

**Correct Answer:**

Actions		Answer Area
Create a new web application.		Install SharePoint Server 2010 SP1 on a new s
		Run the SharePoint Products Configuration Wiz
		Configure server name mappings.
Configure alternate access mappings.		
Run the Farm Configuration Wizard.

**QUESTION 167**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

Server name	Server configuration
Server1	SharePoint Server 2010 SP1
SQL1	Microsoft SQL Server 2008 R2 that has only the database engine component installed

You plan to generate reports by using SQL Server Reporting Services. The report definitions will be stored in SharePoint lists.

You need to recommend a deployment strategy.

What should you recommend?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Actions	Answer Area
Connect SQL1 to the farm.	
On SQL1, install the SQL Server 2008 R2 connectivity components.	
On Server1, install the SQL Server 2008 R2 connectivity components.	
From Central Administration, configure the Reporting Services Integration settings.	
From SQL1, install SharePoint Server 2010 SP1.	
From SQL1, install the Reporting Services component by using native mode.	
From SQL1, install the Reporting Services component by using SharePoint integrated mode.	

**Correct Answer:**

Actions	Answer Area
	From SQL1, install the Reporting Services component in SharePoint integrated mode.
On SQL1, install the SQL Server 2008 R2 connectivity components.	From SQL1, install SharePoint Server 2010 SP1
On Server1, install the SQL Server 2008 R2 connectivity components.	Connect SQL1 to the farm.
	From Central Administration, configure the Reporting Services Integration settings.
From SQL1, install the Reporting Services component by using native mode.

**QUESTION 168**

You plan to deploy two SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1 and Farm2.

Farm1 will host shared services.

Farm2 will host content.

You need to ensure that Farm2 can use the services in Farm1.

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Actions	Answer Area
Exchange trust certificates between the farms.	
On Farm1, publish service applications.	
On Farm1, modify the Send To Connections.	
On Farm2, modify the Send To Connections.	
On Farm2, connect to the service applications.	
On Farm1, configure cross-firewall access zones.	
Modify the permissions of the service applications.	

**Correct Answer:**

Actions	Answer Area
	Exchange trust certificates between the farms
	Modify the permissions of the service applications
On Farm1, modify the Send To Connections.	On Farm1, publish service applications.
On Farm2, modify the Send To Connections.	On Farm2, connect to the service applications
On Farm1, configure cross-firewall access zones.

#### QUESTION 169

You are designing a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

Corporate security policy states that only required ports must be open on servers.

You need to identify which communication ports must be open for the following operations:

- Crawling SMB file shares
- Accessing data from Microsoft SQL Server content databases

- Communicating between front-end Web servers and application servers

Which ports should you identify?

(To answer, drag the appropriate port to the correct operation in the answer area.)

**Select and Place:**

Ports	Answer Area
25	Port <input type="text"/> Crawling SMB file shares
389	Port <input type="text"/> Accessing data from Microsoft SQL Server content databases
445	Port <input type="text"/> Communicating between front-end Web servers and application servers
1433	
32843	

**Correct Answer:**

Ports	Answer Area
25	<input type="text"/> 445 Crawling SMB file shares
389	<input type="text"/> 1433 Accessing data from Microsoft SQL Server content databases
	<input type="text"/> 32843 Communicating between front-end Web servers and application servers

**Explanation/Reference:**

#### QUESTION 170

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

- High availability of the server
- Maximum response time

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Create a search component in the farm.	
Install a single application server that has all service components.	
Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.	
Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.	
Install SharePoint Server 2010 Service Pack 1 (SP1) Standard on all intended servers in the farm by using the <b>/Complete</b> farm option.	
Install SharePoint Server 2010 Service Pack 1 (SP1) Enterprise on all intended servers in the farm by using the <b>/Complete</b> farm option.	
Set up the farm to include the following components: <ul style="list-style-type: none"><li>• A single application server that has all service components except search</li><li>• A connection to a database server that contains Search databases</li><li>• A second database server that contains the SharePoint Central Administration database</li></ul>	

**Correct Answer:**

Install a single application server that has all service components.

Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.

Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.

Install SharePoint Server 2010 Service Pack 1 (SP1) Standard on all intended servers in the farm by using the **/Complete** farm option.

Install SharePoint Server 2010 Service Pack 1 on all intended servers in the farm by using the farm option.

Set up the farm to include the following components:

- A single application server that has all components except search
- A connection to a database server that contains the configuration databases
- A second database server that contains the Central Administration database

Create a search component in the farm.

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

**QUESTION 171**

You have a SharePoint Server 2007 server farm that contains four servers. The servers are configured as shown in the following table.

Server name	Server operating system	Server configuration
APP1	64-bit version of Windows Server 2008	SharePoint Server 2007 Service Pack 1 (SP1)
SQL1	64-bit version of Windows Server 2008	Microsoft SQL Server 2005 Service Pack 1 (SP1)
WFE1	Windows Server 2003 x64	SharePoint Server 2007 Service Pack 1 (SP1)
WFE2	64-bit version of Windows Server 2008	SharePoint Server 2007 Service Pack 1 (SP1)

You need to recommend which steps are required to upgrade the farm to SharePoint Server 2010 SP1.

Which steps should you recommend?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Actions	Answer Area
Decommission WFE1.	
Upgrade SQL1 to SQL Server 2008 R2.	
Install SharePoint Server 2010 SP1 on SQL1.	
Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.	
Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.	

**Correct Answer:**

Actions	Answer Area
	Decommission WFE1.
	Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.
Install SharePoint Server 2010 SP1 on SQL1.	Upgrade SQL1 to SQL Server 2008 R2.
	Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.

#### QUESTION 175

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You create a custom site column named SCI.

Users are allowed to enter any value in SCI.

You need to modify the search infrastructure to meet the following requirements:

- Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
- Users must be able to search for items that have a specific value in SCI.

You need to recommend which SharePoint technology must be implemented to meet the requirements.

What should you recommend?

(To answer, drag the appropriate technology to the correct requirement in the answer area.)

**Select and Place:**

Technologies	Answer Area
Audiences	
Managed Properties	
Search Federation	
Search Scopes	
Term Stores	

Technology	Description
Technology	Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
Technology	Users must be able to search for items that have a specific value in SC1.

**Correct Answer:**

Technologies	Answer Area
Audiences	
Search Federation	
Term Stores	

Search Scopes	Description
Search Scopes	Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
Managed Properties	Users must be able to search for items that have a specific value in SC1.

#### QUESTION 176

You are evaluating the use of Microsoft SharePoint Online and SharePoint Server 2010 Service Pack 1 (SP1) for four companies. Each company estimates the maximum amount of content it will host on SharePoint, as shown in the following table.

Company	Content
Company 1	<ul style="list-style-type: none"> <li>500 My Site sites</li> <li>100 site collections</li> <li>3 terabytes of content</li> </ul>
Company 2	<ul style="list-style-type: none"> <li>300 My Site sites</li> <li>200 site collections</li> <li>6 terabytes of content</li> </ul>
Company 3	<ul style="list-style-type: none"> <li>100 My Site sites</li> <li>225 site collections</li> <li>2 terabytes of content</li> </ul>

You need to identify the appropriate SharePoint environment for each company. The solution must use SharePoint Online whenever possible.

Which environment should you identify for each company?

(To answer, drag the appropriate environment to the correct company in the answer area.)

**Select and Place:**

Environments	Answer Area
SharePoint on-premises	Company 1 Environment
SharePoint Online	Company 2 Environment
	Company 3 Environment

**Correct Answer:**

Environments	Answer Area
SharePoint on-premises	Company 1 SharePoint Online
SharePoint Online	Company 2 SharePoint on-premises
	Company 3 SharePoint Online

#### **QUESTION 177**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains an Excel Services service application.

You plan to display a Microsoft Excel file in a Web Part.  
The Excel file will be stored on a file server and will contain custom calculations written in Microsoft Visual Studio.

You need to identify which Excel Services configuration must be configured to display the Excel file.

What should you configure?

(To answer, drag the appropriate configuration to the correct location in the answer area)

**Select and Place:**

Configurations	Answer Area
a trusted data connection library	Stored on a file server
a trusted data provider	Contain custom calculations written in Visual Studio
a trusted file location	
a user-defined function assembly	

**Correct Answer:**

Configurations	Answer Area
a trusted data connection library	Stored on a file server
a trusted data provider	Contain custom calculations written in Visual Studio
	a trusted file location
	a user-defined function assembly

#### QUESTION 178

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

- Farm1 will host shared service applications.
- Farm2 will host content for the human resources department. The farm content will be searchable.
- Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

- Server virtualization will not be used.
- Farm1 must host service applications whenever possible.
- The service applications must not run on servers that host webpages for end users.
- The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers

should you identify?

(To answer, configure the appropriate number of servers for each farm in the answer area.)

**Select and Place:**

**Answer Area**

Farm name	Number of servers
Farm1	0
Farm2	0
Farm3	0

1 2 3 4

**Correct Answer:**

**Answer Area**

Farm name	Number of servers
Farm1	2
Farm2	4
Farm3	4

1 2 3 4

**QUESTION 179**

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You need to recommend which tools must be used to recover deleted pages, deleted document libraries, and deleted permission levels.

The solution must use the minimum amount of administrative effort.

Which tool should you use for each type of content?

(To answer, drag the appropriate tool to the correct recovery task in the answer area.)

**Select and Place:**

Tools	Answer Area
Microsoft SQL Server backups	Pages <input type="text" value="Tool"/>
Recycle Bin	Document libraries <input type="text" value="Tool"/>
Windows Server Backup	Permission levels <input type="text" value="Tool"/>

**Correct Answer:**

Tools	Answer Area
Microsoft SQL Server backups	Pages <input type="text" value="Recycle Bin"/>
Recycle Bin	Document libraries <input type="text" value="Recycle Bin"/>
Windows Server Backup	Permission levels <input type="text" value="Microsoft SQL Server backups"/>

#### QUESTION 180

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You need to deploy a custom site to the top site of a site collection on the production farm.

What should you do?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

**Select and Place:**

Upload and activate the STP file.	 
Upload and activate the WSP file.	
Save the custom site as a site template.	
Export the custom site as a site definition.	
Create a site collection by using an empty site.	
Create a site collection by using the blank template.	

**Correct Answer:**

Upload and activate the STP file.	 
Export the custom site as a site definition.	
Create a site collection by using an empty site.	
	Save the custom site as a site template. Upload and activate the WSP file. Create a site collection by using the blank template.

#### QUESTION 181

You have a Microsoft SharePoint Portal Server 2003 Service Pack 3 (SP3) server farm.

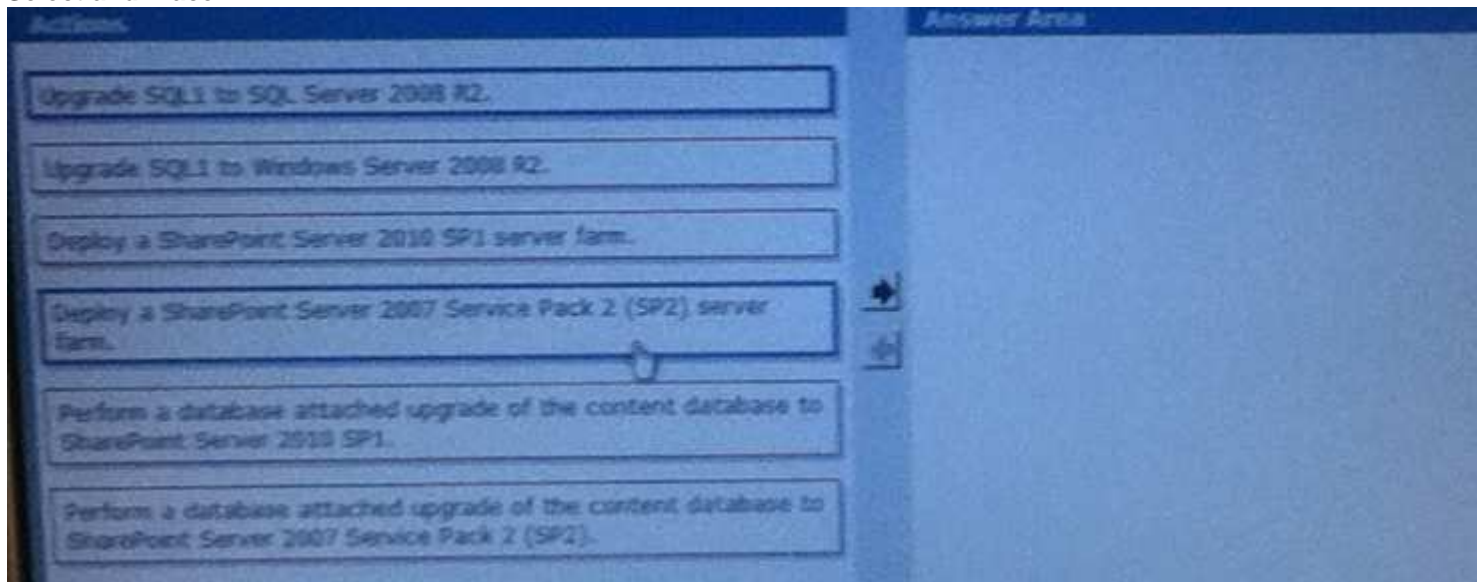

The farm uses a database server named SQL1. SQL1 runs 32-bit version of Windows Server 2003 R2 and has Microsoft SQL server 2005 SP3 installed.

You need to recommend which steps are required to upgrade the farm to SharePoint Server 2010 Service Pack 1 (SP1).

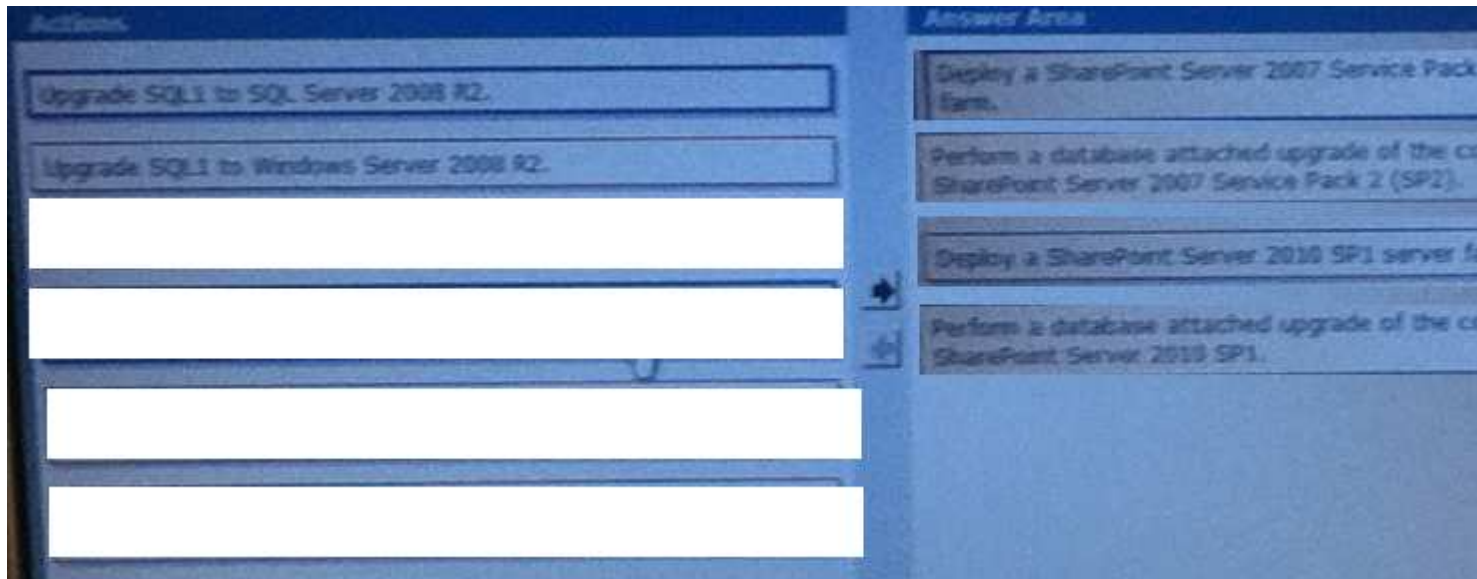

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Select and Place:**

**Correct Answer:**

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

Since the SQL Server machine cannot be used for 2010 (32 bit is supported for 2007, but not 2010), upgrading it is pointless. Therefore, the first two answers are bogus. Upgrading 2003 to 2010 directly isn't supported, so the right sequence should be:

- Deploy a SharePoint 2007 Service Pack 2 (SP2) server farm.
- Perform a database attached upgrade of the content databases to SharePoint Server 2007 Service Pack 2 (SP2).
- Deploy a SharePoint 2010 Service Pack 1 (SP1) server farm.
- Perform a database attached upgrade of the content databases to SharePoint Server 2010 SP1.

**QUESTION 182**

You plan to deploy SharePoint Server 2010 Service Pack 1 (SP1) for the human resource department.

You plan to create two SharePoint groups named Group 1 and Group 2.

The groups must have the following permissions:

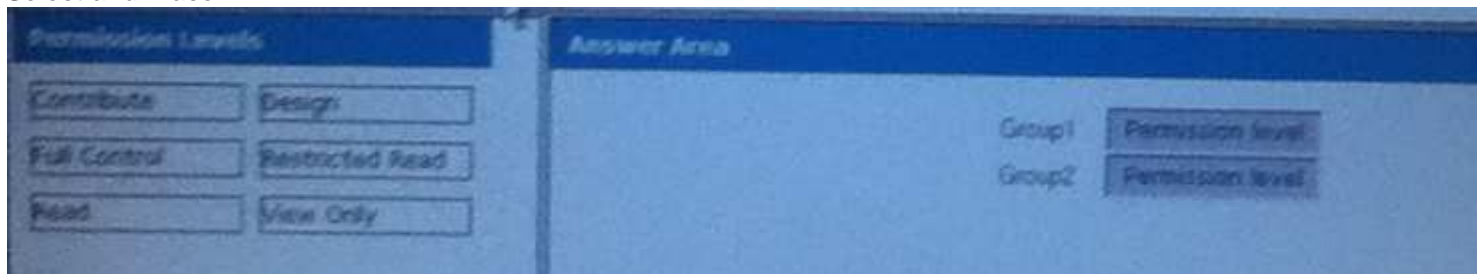

- Users in Group 1 must be able to view pages and documents, but must be prevented from viewing historical versions of pages and documents and permissions of users.
- Users in Group 2 must be able to view pages and list items, and to download documents.

You need to identify the permission level required for each group. The solution must minimize the number of permissions assigned to each group.

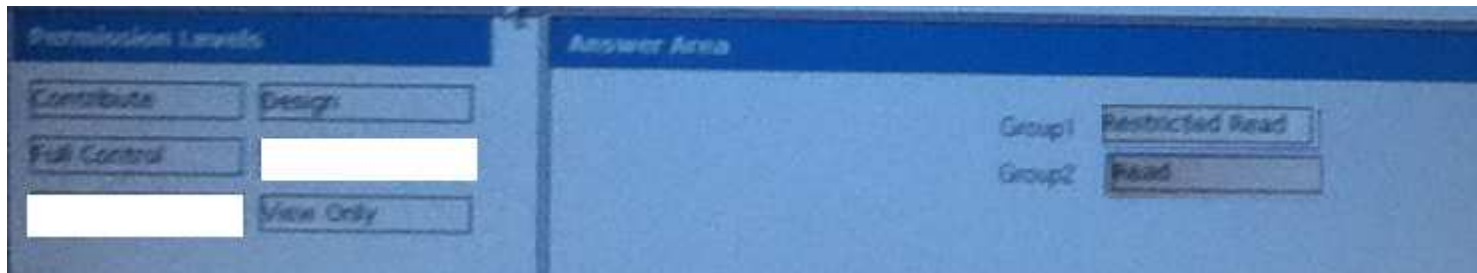

Which permission levels should you identify?

To answer, drag the appropriate permission level to the correct group in the answer area.

#### QUESTION 183

You plan to deploy a business intelligence portal on a server that has SharePoint Server 2010 Service Pack 1 (SP1) installed.

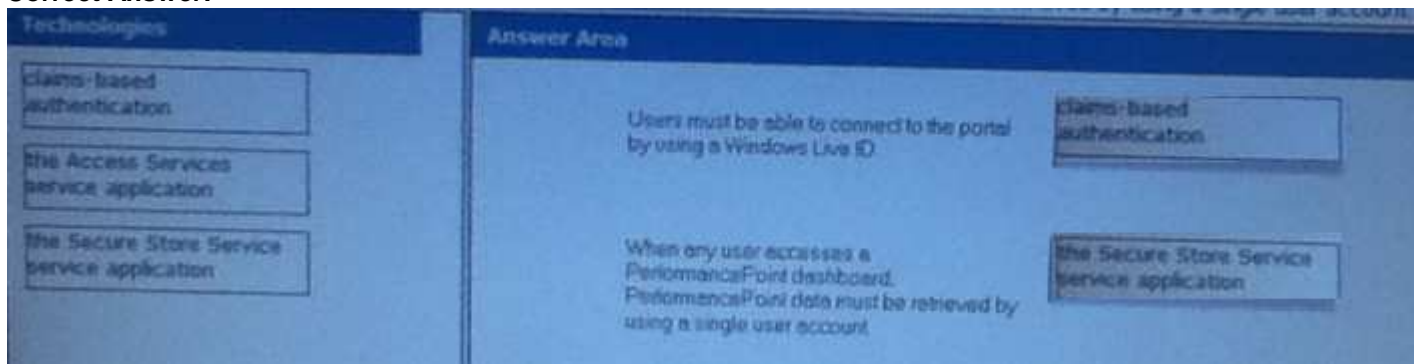

You identify the following requirements for the planned deployment:

- Users must be able to connect to the portal by using a Windows Live ID.
- When any user accesses a PerformancePoint dashboard, PerformancePoint data must be retrieved using a single user account.

**Select and Place:**

#### **QUESTION 184**

Your company is evaluating the development of three custom SharePoint solutions named Solution1, Solution2 and Solution3.

You identify the following requirements for the custom solutions:

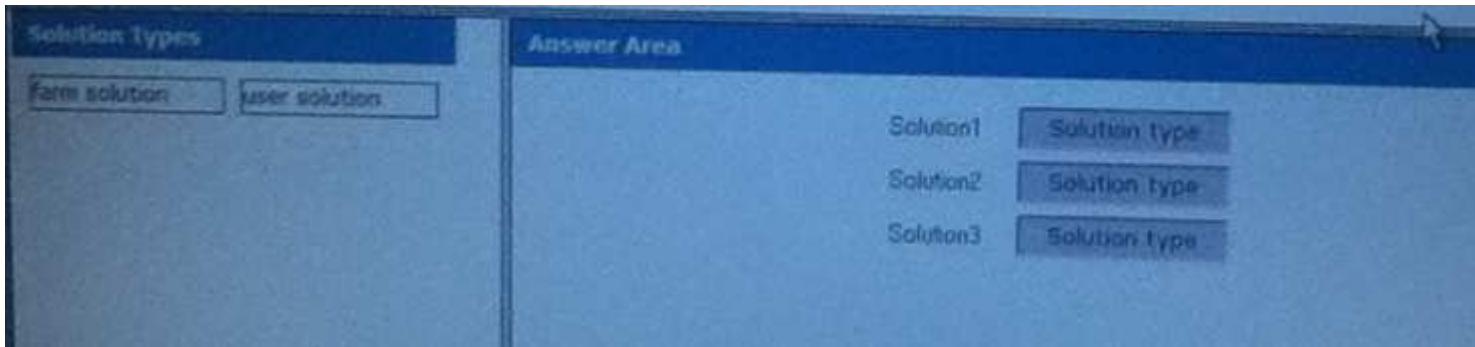

- Solution1 will retrieve information from a Microsoft SQL Server database.
- Solution2 will aggregate information from multiple site collections.
- Solution3 will retrieve data from multiple lists in a site. Solution3 must be load balanced between all front-end Web servers.

You need to recommend which type of solution must be used for each custom solution.

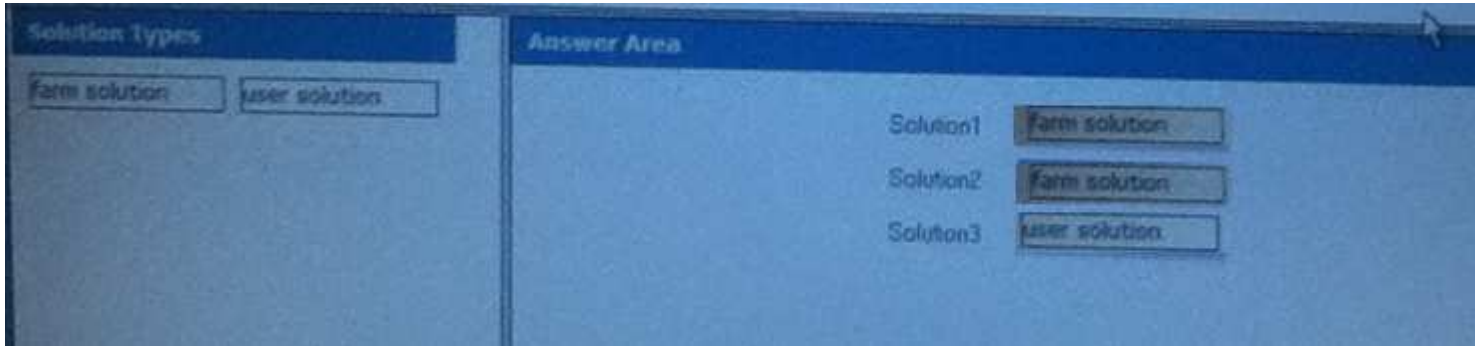

Which type of solutions should you recommend?

To answer, drag the appropriate solution type to the correct custom solution in the answer area.

#### QUESTION 185

Farm name	Farm configuration
Farm1	Dedicated to hosting shared services
Farm2	Dedicated to hosting content for the human resources department
Farm3	Dedicated to hosting content for the finance department

You identify the following deployment requirements:

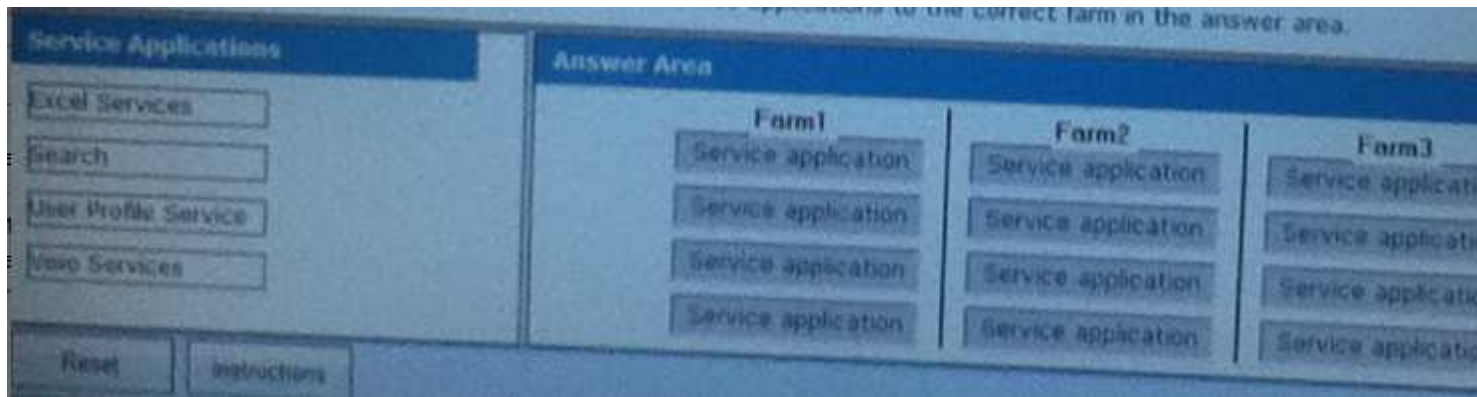

- Users in the human resource department must be able to manage their user profile and to view Microsoft Excel files by using a web browser
- Users in the finance department must be able to search for finance content, to manage their user profile and to view Microsoft Visio web drawings in a web browser.

You need to identify which service application or service applications must be deployed to each farm. Any services that can be shared must be deployed to Farm1.

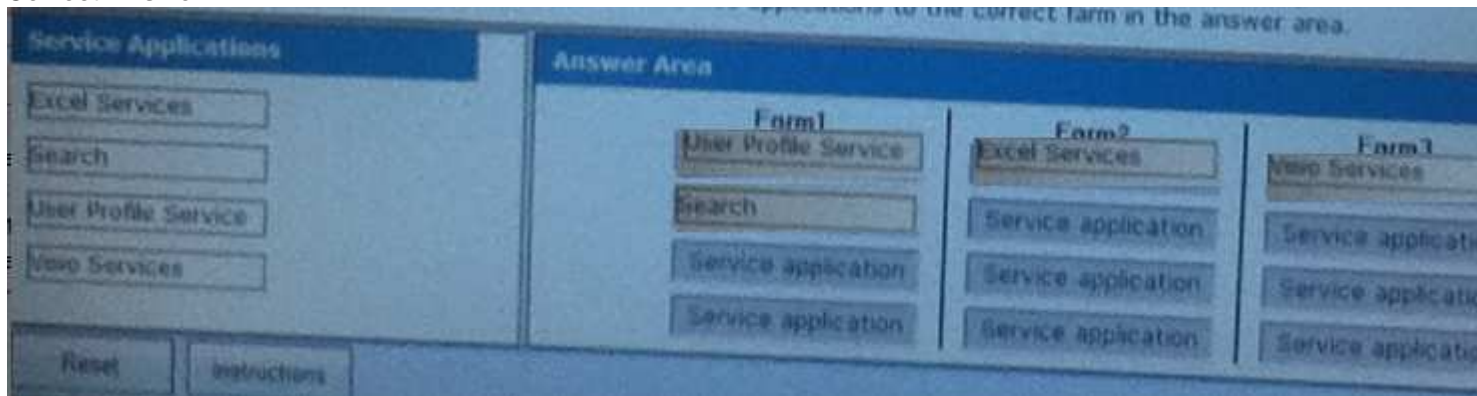

Which service applications should you identify?

To answer, drag the appropriate service application or service applications to the correct farm in the answer area.

#### **QUESTION 187**

Your plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

You identify the following requirements for each farm:

- Farm1 will be dedicated to hosting shared services for users located in Asia and Africa.
- Farm2 will host content and sites for users located in Asia
- Farm3 will host content and sites for users located in Africa

You plan to deploy the following service applications for all of the users:

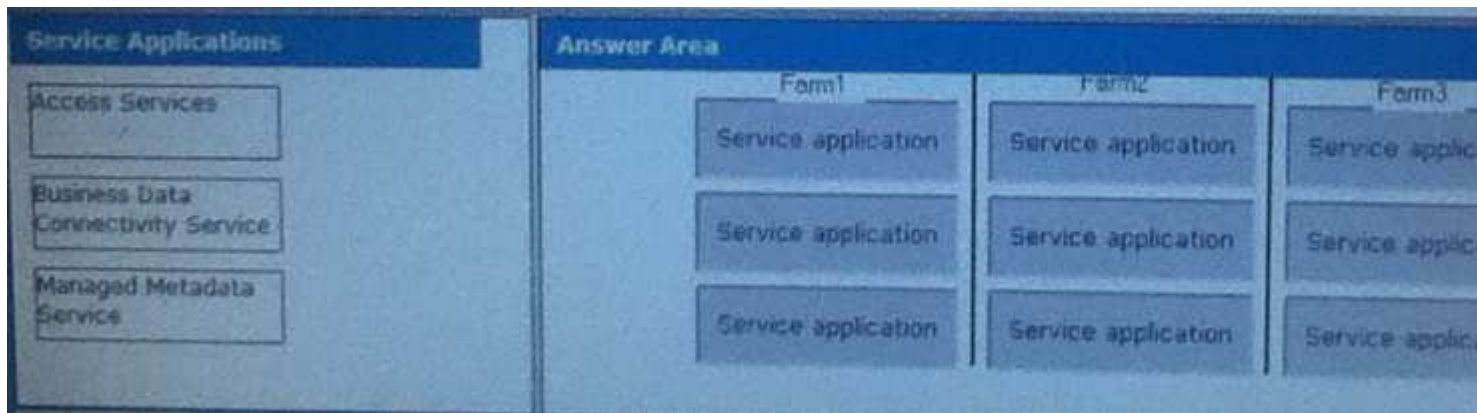

- Access Services
- Managed Metadata Service
- Business Data Connectivity Service

You need to recommend to which farm each service application must be deployed. The solution must minimize the number of service applications deployed to each farm.

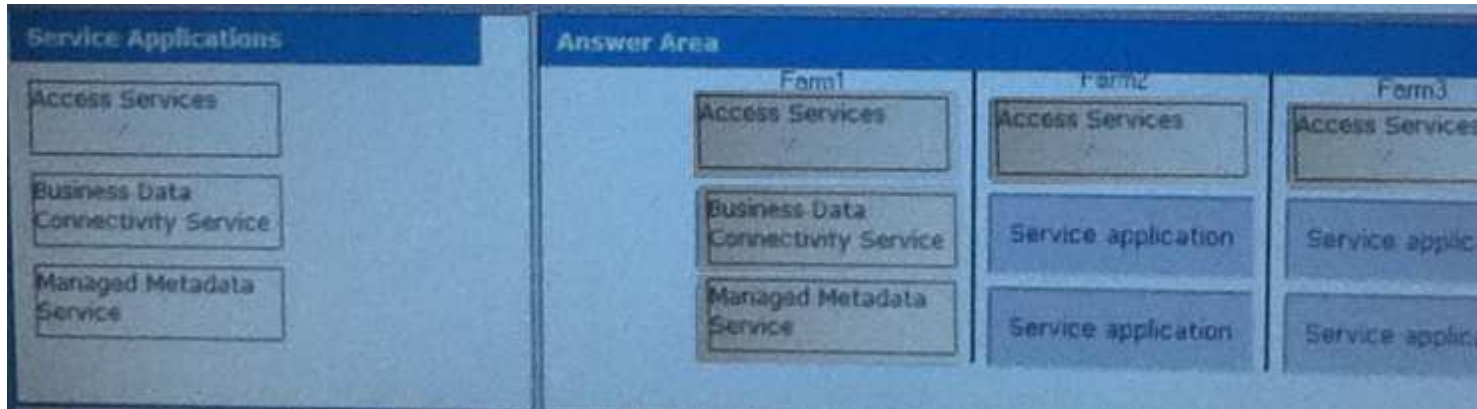

Any services that can be shared must be deployed to Farm 1

Which service applications should you recommend?

**Select and Place:**

**Correct Answer:**

**Section: Drag & Drop**  
**Explanation**

**Explanation/Reference:**

Possible to share:

- User Profile Services
- Managed Metadata Service
- Business Connectivity Services
- Search Service
- Secure Store Service
- Web Analytics Service
