Exam A

QUESTION 1

You are the administrator for a SharePoint 2010 farm.

You need to grant the Self-Service Site Creation permission to users to create their own sites for the www.adatum.com/win7 web application. You also need to ensure that users provide a secondary contact.

What should you do? (To answer, configure the appropriate option or options in the dialog box in the answer area.)

Work Area

Web Application: [Dropdown]

When you enable Self-Service Site Creation, an announcement will be added to the Announcements list on the home page of the top-level Web site. The announcement will provide a link to the site creation page (scsignup.aspx in the _layouts directory).

☐ On

☐ Off

☐ Require secondary contact

OK Cancel

Hot Area:

Work Area

Web Application

When you enable Self-Service Site Creation, an announcement will be added to the Announcements list on the home page of the top-level Web site. The announcement will provide a link to the site creation page (signup.aspx in the _layouts directory).

☒ On
☐ Off

☒ Require secondary contact

OK Cancel

Correct Answer:

Work Area

Web Application

When you enable Self-Service Site Creation, an announcement will be added to the Announcements list on the home page of the top-level Web site. The announcement will provide a link to the site creation page (signup.aspx in the _layouts directory).

☒ On
☐ Off

☒ Require secondary contact

OK Cancel

Section: (none)

Explanation

Explanation/Reference:

Select "Win7" in the **Web Application** drop-down box.

Select the "On" button to enable **Self-Service Site Creation**

Tick the "**Require Secondary Contact**" checkbox.

QUESTION 2

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

A screenshot of a drag-and-drop interface. On the left, there is a list of six actions in white boxes with black borders. On the right, there is an empty area for the answer. In the center, there is a vertical bar with two arrows: a right-pointing arrow at the top and a left-pointing arrow at the bottom.

Actions (left):

- Create a managed metadata term set for document types.
- Add the new column to the search refinement panel definition.
- Create a choice column in the document content type.
- Create a new list and include a lookup in the document content type.
- Include the managed metadata in the document content type.
- Add the secure store application to the search refinement panel definition.

Answer area (right):

Point and Shoot:

A screenshot of the same drag-and-drop interface as above, but with the correct answer sequence highlighted in green boxes on the left and red boxes on the right. The actions are arranged in the correct order from top to bottom.

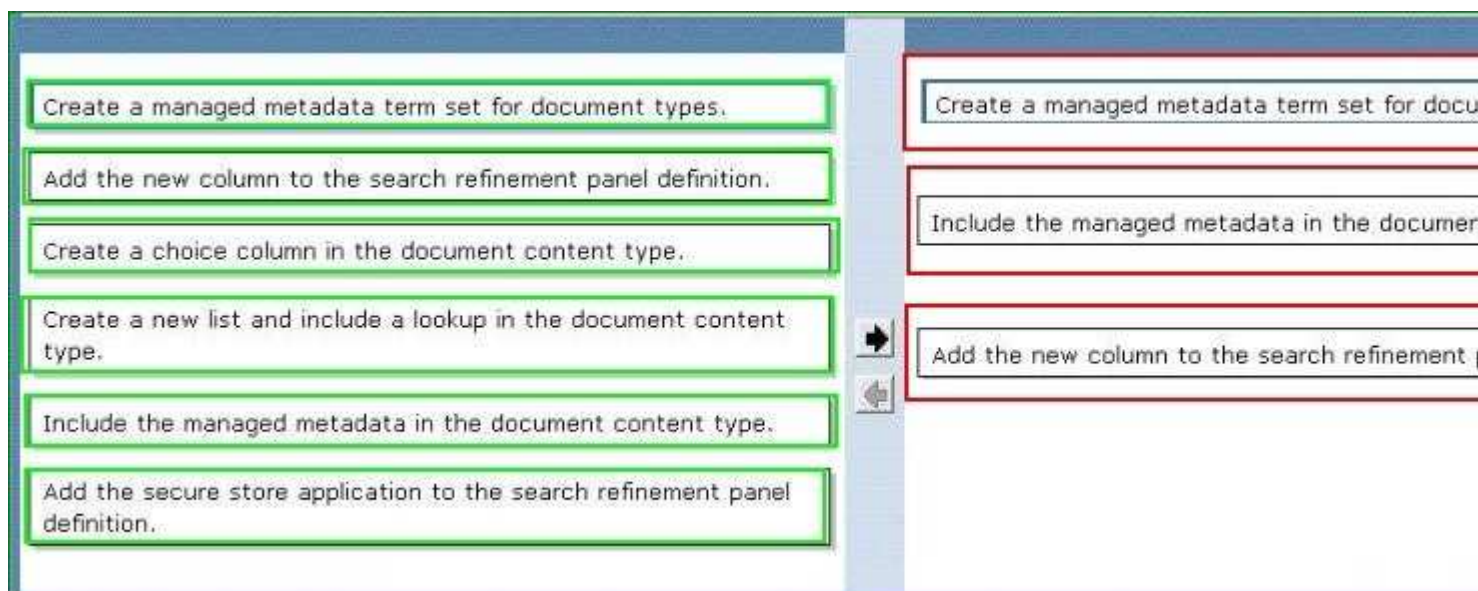

Actions (left, highlighted in green):

- Create a managed metadata term set for document types.
- Add the new column to the search refinement panel definition.
- Create a choice column in the document content type.
- Create a new list and include a lookup in the document content type.
- Include the managed metadata in the document content type.
- Add the secure store application to the search refinement panel definition.

Answer area (right, highlighted in red):

- Create a managed metadata term set for document types.
- Include the managed metadata in the document content type.
- Add the new column to the search refinement panel definition.

Correct Answer:

Section: (none)

QUESTION 3

You are the administrator for a SharePoint 2010 farm.

The farm topology is as shown in the following table.

Servers	Roles
Server A	<ul style="list-style-type: none">• Web Front End• All service applications
Server B	<ul style="list-style-type: none">• Microsoft SQL Server 2008

You want to improve the performance of the search.

You need to add an application server named Server C.

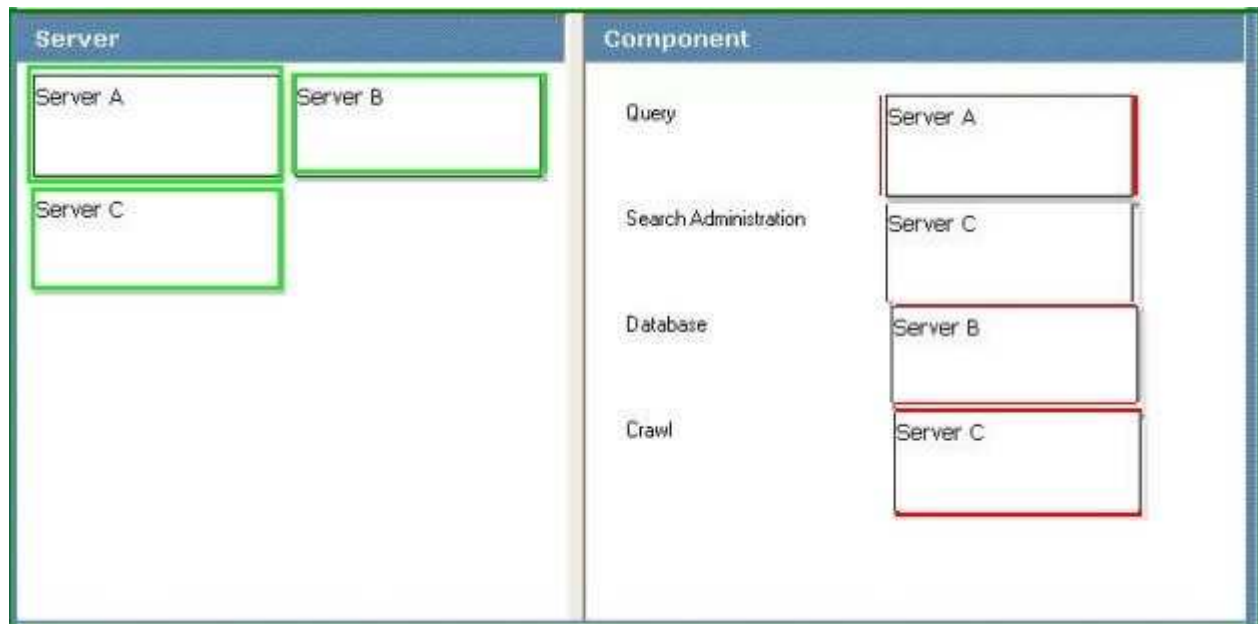

Which component should you place on each of the three servers?

Server	Component
Server A	Query
Server B	Search Administration
Server C	Database
	Crawl

Point and Shoot:

Server	Component
Server A	Query
Server B	Search Administration
Server C	Database
	Crawl

Correct Answer:

Section: (none)

Explanation

Explanation/Reference:

QUESTION 4

You are the administrator for a SharePoint 2010 farm. You use Kerberos authentication and dedicated service accounts for each SharePoint 2010 service.

You want to use Microsoft Excel Services and Microsoft Visio Services service applications to analyze Line-of-Business (LOB) data located on a Microsoft SQL Server in the same domain.

Microsoft SQL Server Reporting Services (SSRS) in SharePoint Integrated mode will be used to report data located on another domain in the forest.

Which type of delegation should you use for the service accounts?

Delegation	Service Accounts	
Constrained Delegation	Excel Services	
Basic Delegation	c2WTS	
	Visio Services	
	SSRS	

Point and Shoot:

Delegation	Service Accounts	
Constrained Delegation	Excel Services	Constrained Delegation
Basic Delegation	c2WTS	Constrained Delegation
	Visio Services	Constrained Delegation
	SSRS	Basic Delegation

Correct Answer:

Delegation	Service Accounts	
Constrained Delegation	Excel Services	Constrained Delegation
Basic Delegation	c2WTS	Constrained Delegation
	Visio Services	Constrained Delegation
	SSRS	Basic Delegation

Section: (none)

Explanation

Explanation/Reference:

QUESTION 5

You are the administrator for a SharePoint 2010 farm.

You plan to acquire SharePoint 2010 licenses.

Which features are included in each version of SharePoint?

SharePoint Version	Feature
SharePoint 2010 Foundation	Document Libraries
SharePoint 2010 Standard	Unique Document IDs
SharePoint 2010 Enterprise	Document Sets
	Content Types
	Visio Services

Point and Shoot:

SharePoint Version	Feature
SharePoint 2010 Foundation	Document Libraries: SharePoint 2010 Foundation
SharePoint 2010 Standard	Unique Document IDs: SharePoint 2010 Standard
SharePoint 2010 Enterprise	Document Sets: SharePoint 2010 Standard
	Content Types: SharePoint 2010 Foundation
	Visio Services: SharePoint 2010 Enterprise

Correct Answer:

SharePoint Version	Feature
SharePoint 2010 Foundation	Document Libraries: SharePoint 2010 Foundation
SharePoint 2010 Standard	Unique Document IDs: SharePoint 2010 Standard
SharePoint 2010 Enterprise	Document Sets: SharePoint 2010 Standard
	Content Types: SharePoint 2010 Foundation
	Visio Services: SharePoint 2010 Enterprise

Section: (none)

Explanation

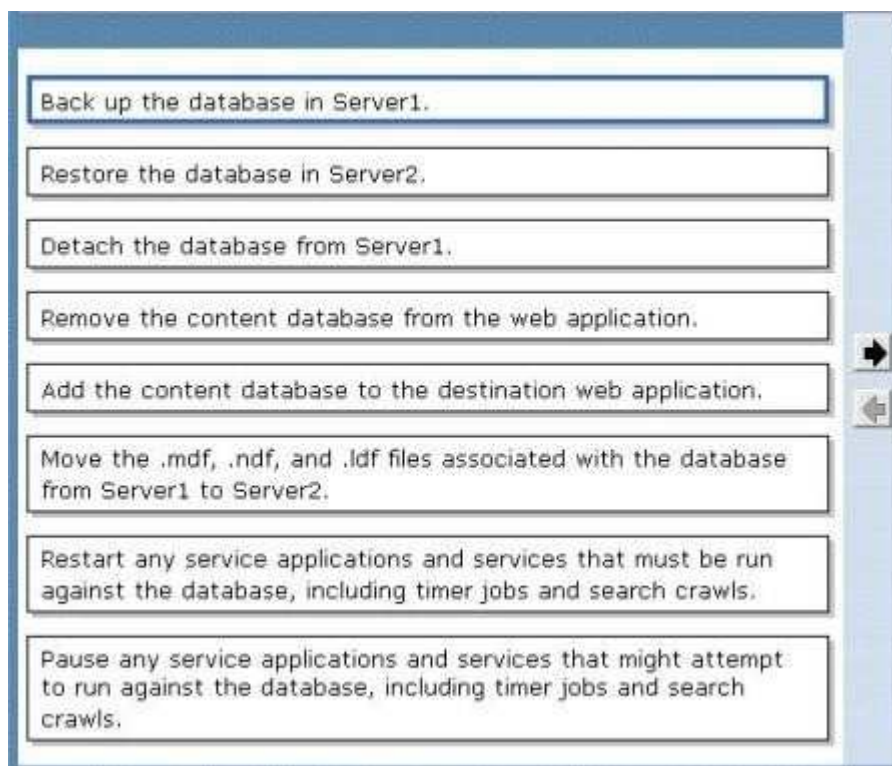

Explanation/Reference:

QUESTION 6

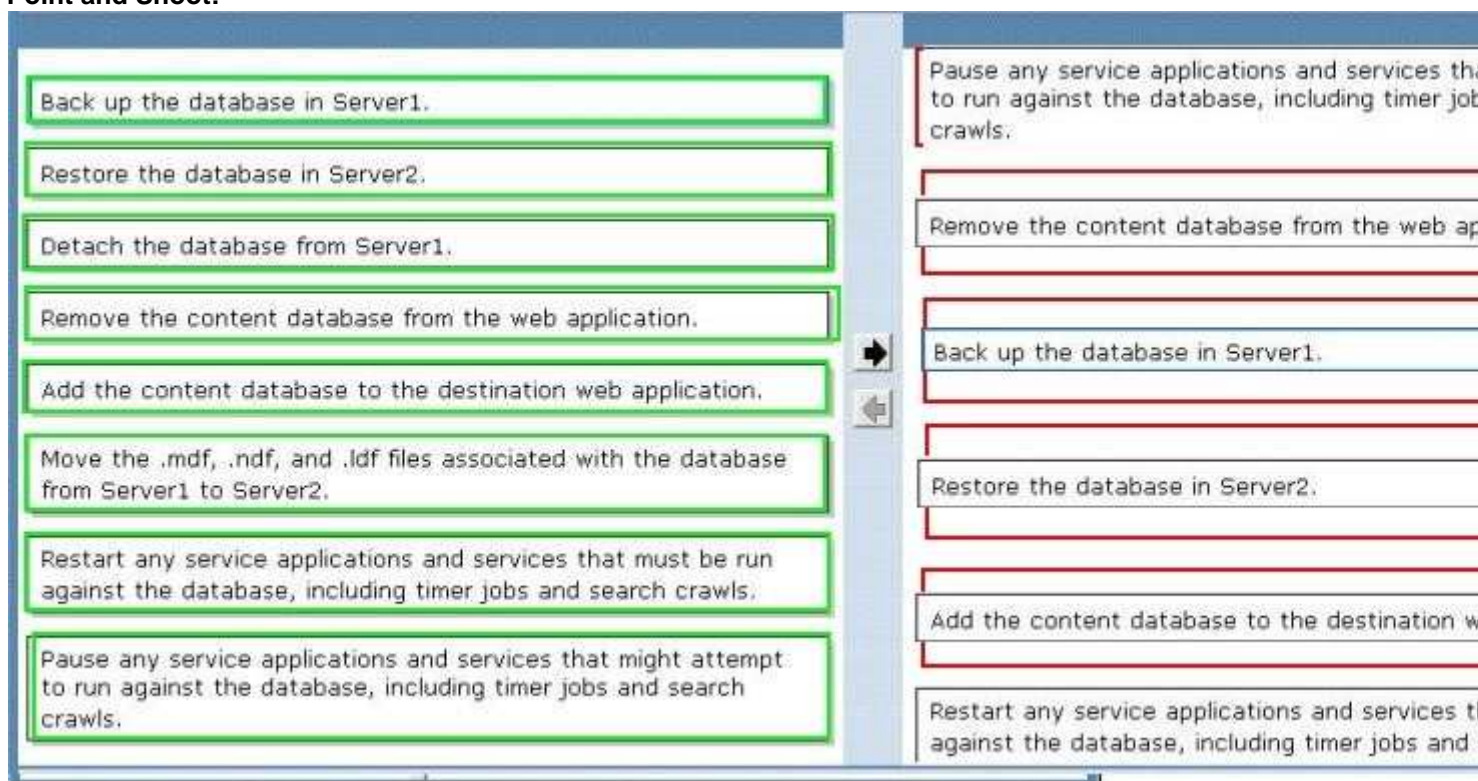

You are the administrator for a SharePoint 2010 farm.

You need to move the content database from a Microsoft SQL Server named Server1 to an SQL Server named Server2 within the farm.

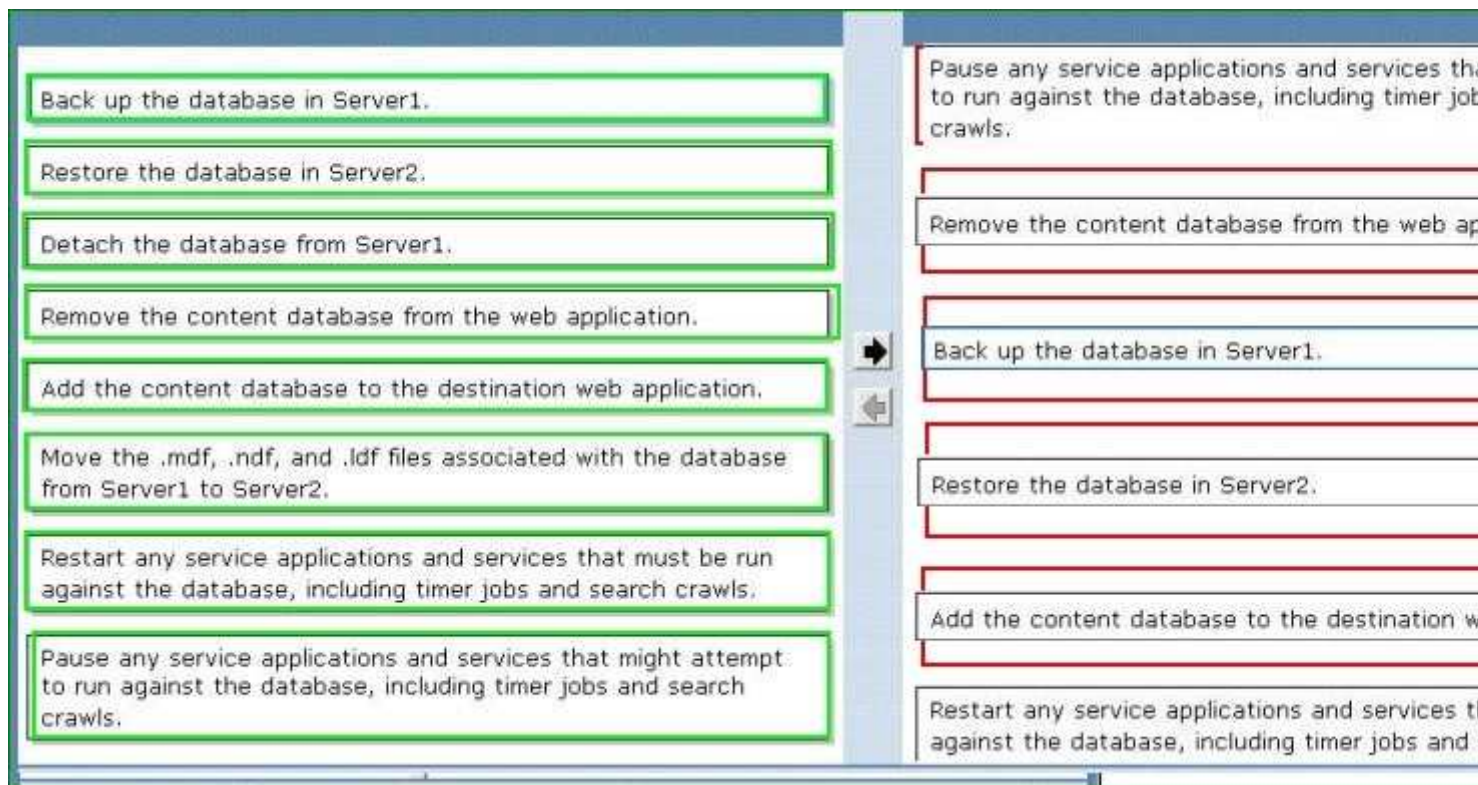

What should you do?

Point and Shoot:

Correct Answer:

Section: (none)

Explanation

Explanation/Reference:

QUESTION 7

You are the administrator for a SharePoint 2010 farm.

You create a top-level site named SiteA that uses Windows authentication and the default permission set.

<http://www.gratisexam.com/>

You need to design the security schema for the following taxonomy:

Securable object	Description
SiteA/SubsiteA	Sensitive group
SiteA/SubsiteA/ListA	Non-sensitive data
SiteA/SubsiteA/LibraryA	Non-sensitive documents, but has one or more sensitive items
SiteA/SubsiteB	Group shared project information
SiteA/SubsiteB/ListB	Non-sensitive data, but has one or more sensitive items
SiteA/SubsiteB/LibraryB	Non-sensitive documents, but has a special folder that contains sensitive items

Which type of permissions should you implement?

Source Heading	Securable object
Inherited	SiteA/SubsiteA
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB
	SiteA/SubsiteB/ListB
	SiteA/SubsiteB/LibraryB

Point and Shoot:

Source Heading	Securable object
Inherited	SiteA/SubsiteA
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB
	SiteA/SubsiteB/ListB
	SiteA/SubsiteB/LibraryB

Correct Answer:

Source Heading	Securable object
Inherited	SiteA/SubsiteA
Unique, has Copy permissions from SiteA	SiteA/SubsiteA/ListA
Inherited, has unique permissions at the item level	SiteA/SubsiteA/LibraryA
Inherited, has unique permissions at the folder and item levels	SiteA/SubsiteB
	SiteA/SubsiteB/ListB
	SiteA/SubsiteB/LibraryB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 8

You are the administrator for a SharePoint 2010 farm.

You need to make a site collection publicly available at the following URL:
<http://books.fabrikam.com>.

What should you do?

The screenshot shows the 'Extend the web application' wizard in SharePoint 2010. The wizard is a vertical sequence of steps, each in a box. The first step is 'Extend the web application to a new website.' The subsequent steps are: 'Set the **Allow Anonymous** setting on the website extension to **Yes**.', 'Set the **Allow Anonymous** setting on the new web application to **Yes**.', 'Set the **Alternate Access Mapping** setting to **http://books.fabrikam.com**.', 'Set the **Anonymous Access Permission** setting on the site collection to **Entire Site**.', and 'Set the **Host Header** setting on the website extension to **http://books.fabrikam.com**.' To the right of the steps are navigation arrows: a right arrow and a left arrow.

Extend the web application to a new website.

Set the **Allow Anonymous** setting on the website extension to **Yes**.

Set the **Allow Anonymous** setting on the new web application to **Yes**.

Set the **Alternate Access Mapping** setting to **http://books.fabrikam.com**.

Set the **Anonymous Access Permission** setting on the site collection to **Entire Site**.

Set the **Host Header** setting on the website extension to **http://books.fabrikam.com**.

Point and Shoot:

Correct Answer:

Section: (none)

Explanation

Explanation/Reference:

QUESTION 9

You are the administrator for a SharePoint 2010 farm.

You are planning to use various Unified Logging Service (ULS) log types.

Which features are included in each ULS log type?

ULS Log Type	Feature
Windows Event Log	Change Storage Location Merge Logs Event Throttling Event Log Flood Protection
SharePoint Trace Logs	
Both	

Point and Shoot:

ULS Log Type	Feature
Windows Event Log	Change Storage Location Merge Logs Event Throttling Event Log Flood Protection
SharePoint Trace Logs	SharePoint Trace Logs SharePoint Trace Logs Both
Both	Windows Event Log

Correct Answer:

ULS Log Type	Feature
Windows Event Log	Change Storage Location Merge Logs Event Throttling Event Log Flood Protection
SharePoint Trace Logs	SharePoint Trace Logs SharePoint Trace Logs Both
Both	Windows Event Log

Section: (none)

Explanation

Explanation/Reference:

QUESTION 10

You are the administrator for a SharePoint 2010 farm.

You need to deploy a custom site to the top site of a site collection on the production farm.

What should you do?

Upload and activate the WSP file.

Save the custom site as a site template.

Create a site collection by using an empty site.

Create a site collection by using a blank site definition.

Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

Point and Shoot:

Upload and activate the WSP file.

Save the custom site as a site template.

Create a site collection by using an empty site.

Create a site collection by using a blank site definition.

Export the custom site to the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

Upload and activate the custom site from the following directory: Program Files\Common files\Microsoft Shared\Web Server Extensions\14\templates.

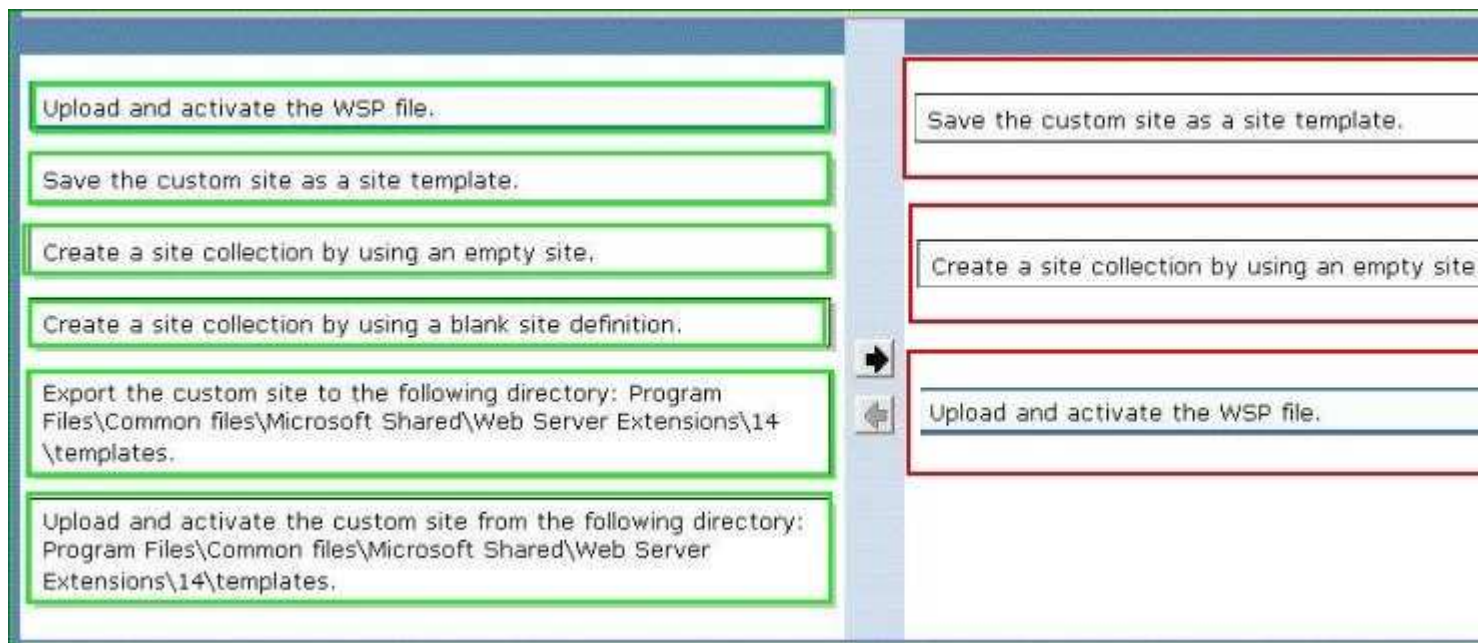

Save the custom site as a site template.

Create a site collection by using an empty site.

Upload and activate the WSP file.

Correct Answer:

Section: (none)

Explanation

Explanation/Reference:

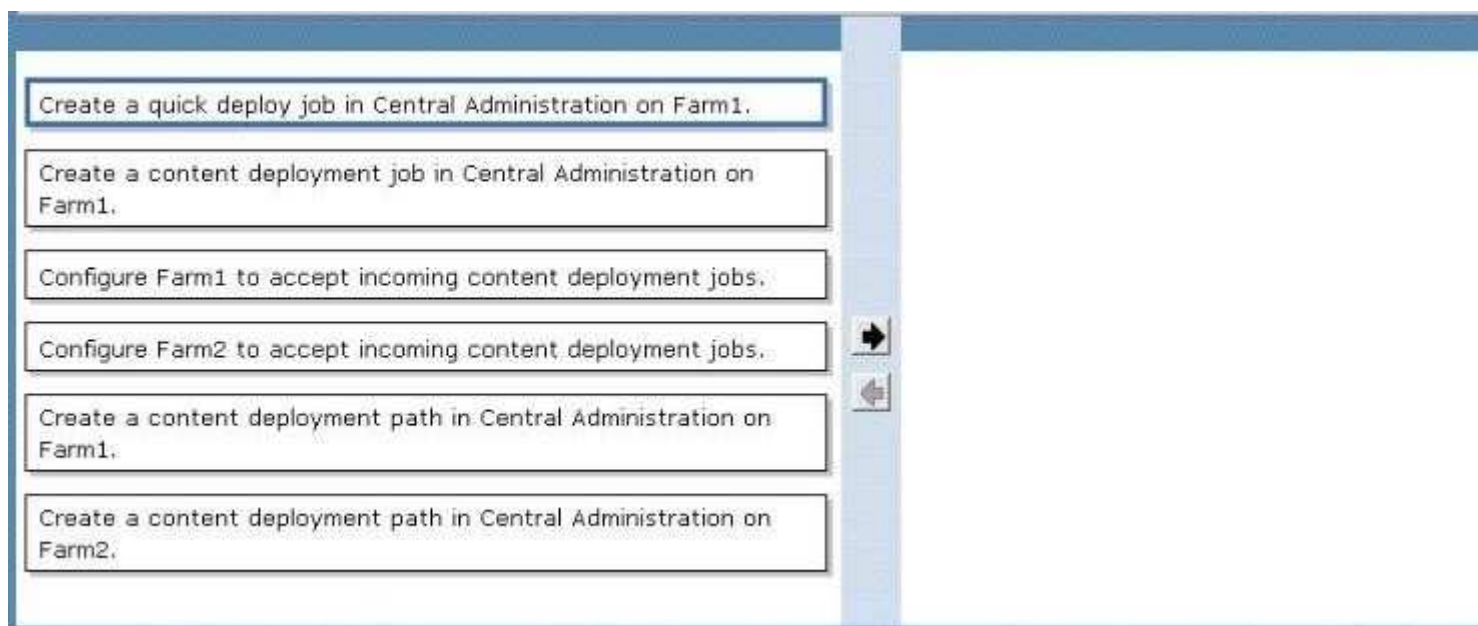

QUESTION 11

You are the administrator for a SharePoint 2010 server farm named Farm1.

You create a second farm named Farm2 that is publicly available to host a public website.

You need to design a solution that will allow you to deploy web content from Farm1 to Farm2 on a scheduled basis.

What should you do?

Point and Shoot:

Left side tasks (green boxes):

- Create a quick deploy job in Central Administration on Farm1.
- Create a content deployment job in Central Administration on Farm1.
- Configure Farm1 to accept incoming content deployment jobs.
- Configure Farm2 to accept incoming content deployment jobs.
- Create a content deployment path in Central Administration on Farm1.
- Create a content deployment path in Central Administration on Farm2.

Right side options (red boxes):

- Configure Farm2 to accept incoming content deployment jobs.
- Create a content deployment path in Central Administration on Farm1.
- Create a content deployment job in Central Administration on Farm1.

Correct Answer:

Left side tasks (green boxes):

- Create a quick deploy job in Central Administration on Farm1.
- Create a content deployment job in Central Administration on Farm1.
- Configure Farm1 to accept incoming content deployment jobs.
- Configure Farm2 to accept incoming content deployment jobs.
- Create a content deployment path in Central Administration on Farm1.
- Create a content deployment path in Central Administration on Farm2.

Right side options (red boxes):

- Configure Farm2 to accept incoming content deployment jobs.
- Create a content deployment path in Central Administration on Farm1.
- Create a content deployment job in Central Administration on Farm1.

QUESTION 12

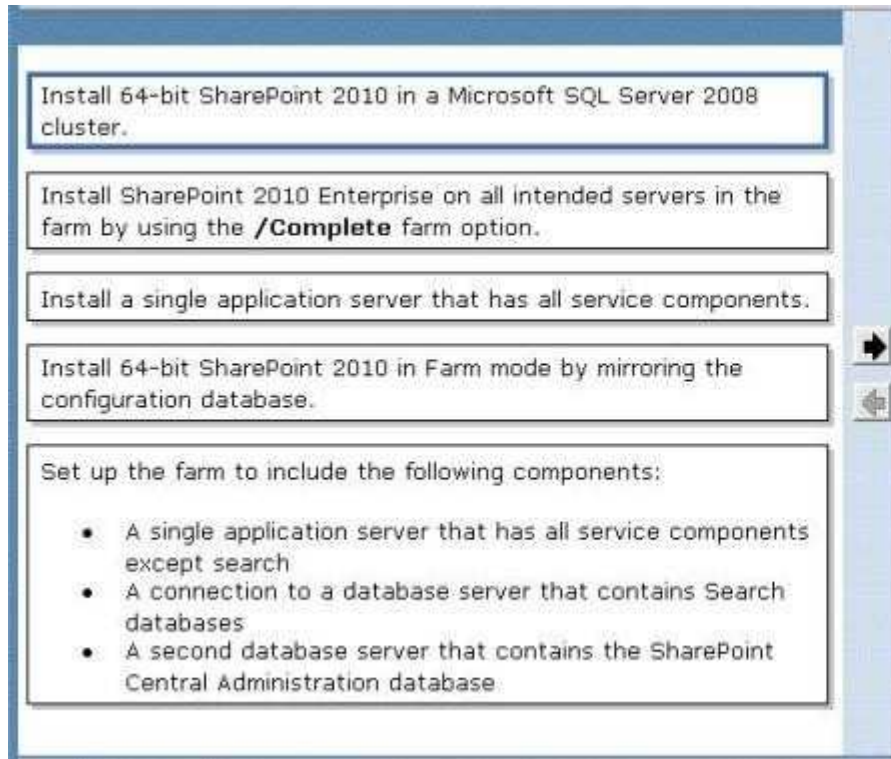

You are the administrator for a SharePoint 2010 farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

- High availability of the server
- Maximum response time

What should you do?

The screenshot shows a SharePoint 2010 installation wizard window. It contains a list of steps for installing SharePoint 2010 in Farm mode. The steps are as follows:

- Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.
- Install SharePoint 2010 Enterprise on all intended servers in the farm by using the **/Complete** farm option.
- Install a single application server that has all service components.
- Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.
- Set up the farm to include the following components:
 - A single application server that has all service components except search
 - A connection to a database server that contains Search databases
 - A second database server that contains the SharePoint Central Administration database

Navigation buttons (back and forward) are visible on the right side of the list.

Point and Shoot:

<p>Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.</p> <p>Install SharePoint 2010 Enterprise on all intended servers in the farm by using the /Complete farm option.</p> <p>Install a single application server that has all service components.</p> <p>Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.</p> <p>Set up the farm to include the following components:</p> <ul style="list-style-type: none">• A single application server that has all service components except search• A connection to a database server that contains Search databases• A second database server that contains the SharePoint Central Administration database	<p>Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.</p> <p>Install SharePoint 2010 Enterprise on all intended servers in the farm by using the /Complete farm option.</p> <p>Set up the farm to include the following components:</p> <ul style="list-style-type: none">• A single application server that has all service components except search• A connection to a database server that contains Search databases• A second database server that contains the SharePoint Central Administration database
---	---

Correct Answer:

<p>Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.</p> <p>Install SharePoint 2010 Enterprise on all intended servers in the farm by using the /Complete farm option.</p> <p>Install a single application server that has all service components.</p> <p>Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.</p> <p>Set up the farm to include the following components:</p> <ul style="list-style-type: none">• A single application server that has all service components except search• A connection to a database server that contains Search databases• A second database server that contains the SharePoint Central Administration database	<p>Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.</p> <p>Install SharePoint 2010 Enterprise on all intended servers in the farm by using the /Complete farm option.</p> <p>Set up the farm to include the following components:</p> <ul style="list-style-type: none">• A single application server that has all service components except search• A connection to a database server that contains Search databases• A second database server that contains the SharePoint Central Administration database

Explanation

Explanation/Reference:

QUESTION 14

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm. The farm contains a server named

Server1. Server1 has Microsoft SQL Server 2008 R2 installed.

You deploy a new server named Server2.

You install SQL Server 2008 R2 and SharePoint Server 2010 Service Pack 1 (SP1) on Server2.

You plan to migrate from SharePoint Server 2007 SP2 to SharePoint Server 2010 SP1. After you complete the migration, you plan to remove Server1 from the network.

You need to plan the migration to meet the following requirements:

- Minimize administrative effort.
- Prevent the users from modifying or creating new content during the migration.

What should you do?

Actions	Answer Area
On Server2, set the database to read/write.	
On Server1, set the database to read-only.	
On Server2, set the content database status to Ready .	
On Server1, set the content database status to Offline .	
Attach the content databases to a web application on Server2.	
Perform a SQL Server backup of the content databases on Server1.	
Perform a SQL Server restore of the content databases on Server2.	

Point and Shoot:

Actions	Answer Area
On Server2, set the database to read/write.	On Server1, set the database to read-only.
On Server1, set the database to read-only.	Perform a SQL Server backup of the content d Server1.
On Server2, set the content database status to Ready .	Perform a SQL Server restore of the content d Server2.
On Server1, set the content database status to Offline .	On Server2, set the database to read/write.
Attach the content databases to a web application on Server2.	Attach the content databases to a web applica
Perform a SQL Server backup of the content databases on Server1.	
Perform a SQL Server restore of the content databases on Server2.	

Correct Answer:

Actions	Answer Area
On Server2, set the database to read/write.	On Server1, set the database to read-only.
On Server1, set the database to read-only.	Perform a SQL Server backup of the content d Server1.
On Server2, set the content database status to Ready .	Perform a SQL Server restore of the content d Server2.
On Server1, set the content database status to Offline .	On Server2, set the database to read/write.
Attach the content databases to a web application on Server2.	Attach the content databases to a web applica
Perform a SQL Server backup of the content databases on Server1.	
Perform a SQL Server restore of the content databases on Server2.

QUESTION 15

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

- Farm1 will host shared service applications.

- Farm2 will host content for the human resources department. The farm content will be searchable.
- Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

- Server virtualization will not be used.
- Farm1 must host service applications whenever possible.
- The service applications must not run on servers that host webpages for end users.
- The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers should you identify?

Number of Servers	Answer Area
1 2 4 6	Farm1 <input type="text"/>
	Farm2 <input type="text"/>
	Farm3 <input type="text"/>

Point and Shoot:

Number of Servers	Answer Area
1 2 4 6	Farm1 <input type="text" value="2"/>
	Farm2 <input type="text" value="4"/>
	Farm3 <input type="text" value="4"/>

Correct Answer:

Number of Servers	Answer Area
1 2 4 6	Farm1 <input type="text" value="2"/>
	Farm2 <input type="text" value="4"/>
	Farm3 <input type="text" value="4"/>

QUESTION 16

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

You identify the following requirements for each farm:

- Farm1 will host content and sites for users located in Europe.
- Farm2 will host content and sites for users located in North America.
- Farm3 will be dedicated to hosting shared services for users located in Europe and North America.

You plan to deploy the following service applications for all of the users:

- Excel Services
- User Profile Service
- Managed Metadata Service

You need to recommend to which farm each service application must be deployed. The solution must minimize the number of service applications deployed to each farm. Any services that can be shared must be deployed to Farm3.

Which service applications should you recommend?

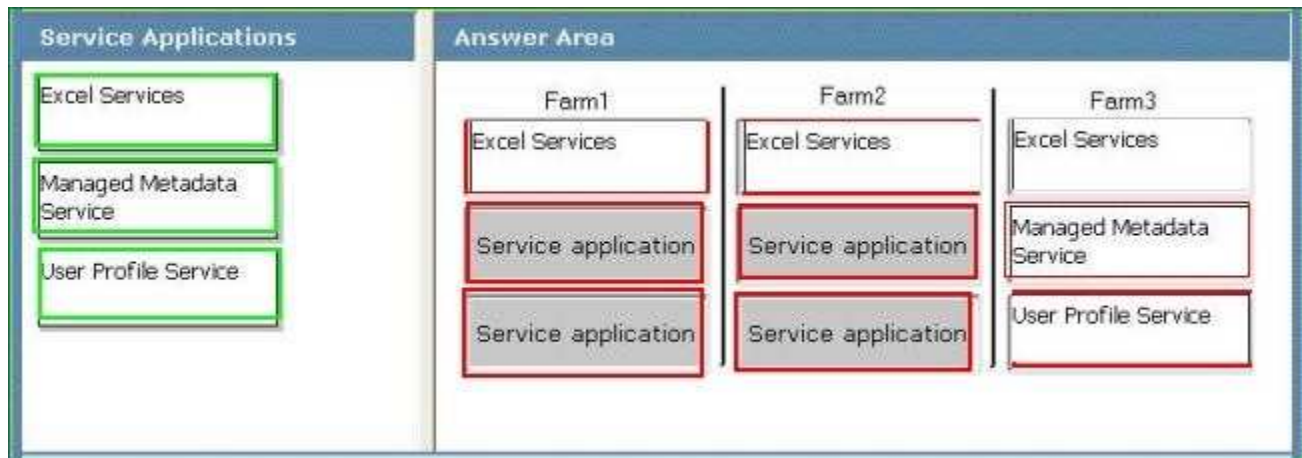

To answer, drag the appropriate service application to the correct farm or farms in the answer area.

Service Applications	Answer Area		
	Farm1	Farm2	Farm3
Excel Services	Service application	Service application	Service application
Managed Metadata Service	Service application	Service application	Service application
User Profile Service	Service application	Service application	Service application

Point and Shoot:

Service Applications	Answer Area		
	Farm1	Farm2	Farm3
Excel Services	Excel Services	Excel Services	Excel Services
Managed Metadata Service	Service application	Service application	Managed Metadata Service
User Profile Service	Service application	Service application	User Profile Service

QUESTION 18

Your company is evaluating the development of three custom SharePoint solutions named

Solution1, Solution2, and Solution3. You identify the following requirements for the custom solutions:

- Solution1 will aggregate information from multiple site collections.
- Solution2 will retrieve data from multiple lists in a site. Solution2 must be load balanced between all front-end Web servers.
- Solution3 will contain a workflow created by using Microsoft Visual Studio 2010, The workflow will contain custom code.

You need to recommend which type of solution must be used for each custom solution.

Which type of solutions should you recommend?

Solution Types	Answer Area
farm solution	Solution1 Solution type
user solution	Solution2 Solution type
	Solution3 Solution type

Point and Shoot:

Solution Types	Answer Area
farm solution	Solution1 farm solution
user solution	Solution2 user solution
	Solution3 user solution

Correct Answer:

Solution Types	Answer Area
farm solution	Solution1 farm solution
user solution	Solution2 user solution
	Solution3 user solution

QUESTION 19

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains an Excel Services service application. You plan to display a Microsoft Excel file in a Web Part.

The Excel file will contain the following:

- Data from a Microsoft SQL Server database
- Custom calculations written in Microsoft Visual Studio

You need to identify which Excel Services configuration must be configured to display the Excel file.

What should you configure?

Configurations	Answer Area
a trusted data connection library	Data from a SQL Server database Configuration
a trusted data provider	Custom calculations written in Visual Studio Configuration
a trusted file location	
a user-defined function assembly	

Point and Shoot:

Configurations	Answer Area
a trusted data connection library	Data from a SQL Server database a trusted file location
a trusted data provider	Custom calculations written in Visual Studio a user-defined function assembly
a trusted file location	
a user-defined function assembly	

Correct Answer:

Configurations	Answer Area
a trusted data connection library	Data from a SQL Server database a trusted file location
a trusted data provider	Custom calculations written in Visual Studio a user-defined function assembly
a trusted file location	
a user-defined function assembly

QUESTION 20

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You are planning the administrative model for search.

You identify different groups of users who will perform the following tasks:

- Manage authoritative pages.
- Manage shared search scopes.

You need to identify from which location you must configure permissions to ensure that the users can perform the required tasks. The solution must minimize the number of permissions assigned to each user.

Which locations should you identify?

Locations	Answer Area
<input type="text" value="Search service application"/>	Manage authoritative pages. <input type="text" value="Location"/>
<input type="text" value="site collection"/>	Manage shared search scopes. <input type="text" value="Location"/>
<input type="text" value="web application"/>	

Point and Shoot:

Locations	Answer Area
<input type="text" value="Search service application"/>	Manage authoritative pages. <input type="text" value="web application"/>
<input type="text" value="site collection"/>	Manage shared search scopes. <input type="text" value="Search service application"/>
<input type="text" value="web application"/>	

Correct Answer:

Locations	Answer Area
<input type="text" value="Search service application"/>	Manage authoritative pages. <input type="text" value="web application"/>
<input type="text" value="site collection"/>	Manage shared search scopes. <input type="text" value="Search service application"/>
<input type="text" value="web application"/>

QUESTION 21

You are planning the deployment of SharePoint Server 2010 Service Pack (SP1).

You need to recommend the minimum editions of SharePoint that must be deployed to meet the following requirements:

- Display data from Microsoft SQL Server databases in a SharePoint list.
- Synchronize user profile data between SharePoint and Active Directory.
- Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams by using a web browser.

Editions	Answer Area
SharePoint Foundation 2010	<div>Edition</div> Display data from Microsoft SQL Server databases in a SharePoint list.
SharePoint Server 2010 Enterprise	<div>Edition</div> Synchronize user profile data between SharePoint and Active Directory.
SharePoint Server 2010 Standard	<div>Edition</div> Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.

Which edition should you recommend for each requirement?

Point and Shoot:

Editions	Answer Area
SharePoint Foundation 2010	SharePoint Foundation 2010 Display data from Microsoft SQL Server databases in a SharePoint list.
SharePoint Server 2010 Enterprise	SharePoint Server 2010 Standard Synchronize user profile data between SharePoint and Active Directory.
SharePoint Server 2010 Standard	SharePoint Server 2010 Enterprise Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.

Correct Answer:

Editions	Answer Area
SharePoint Foundation 2010	SharePoint Foundation 2010 Display data from Microsoft SQL Server databases in a SharePoint list.
SharePoint Server 2010 Enterprise	SharePoint Server 2010 Standard Synchronize user profile data between SharePoint and Active Directory.
SharePoint Server 2010 Standard	SharePoint Server 2010 Enterprise Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.

QUESTION 22

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend a monitoring solution to meet the following requirements:

- Monitor the most viewed pages.
- Monitor the search query latency.

The solution must use the minimum amount of administrative effort.

What should you recommend?

Monitoring Solutions	Answer Area
Administrative reports	Monitor the most viewed pages. Monitoring solution
Auditing reports	Monitor the search query latency. Monitoring solution
SharePoint Health Analyzer	
Web Analytics reports	

Point and Shoot:

Monitoring Solutions	Answer Area
Administrative reports	Monitor the most viewed pages. Web Analytics reports
Auditing reports	
SharePoint Health Analyzer	Monitor the search query latency. SharePoint Health Analyzer
Web Analytics reports	

Correct Answer:

Monitoring Solutions	Answer Area
Administrative reports	Monitor the most viewed pages. Web Analytics reports
Auditing reports	
SharePoint Health Analyzer	Monitor the search query latency. SharePoint Health Analyzer
Web Analytics reports	

Section: (none)

Explanation

Explanation/Reference:

SEARCH QUERY LATENCY IS HEALTH ANALYZER

QUESTION 23

You are planning a recovery strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

- A document that a user deleted 15 days ago must be recovered.
- A site collection that was deleted 20 days ago must be recovered.

You need to recommend which component must be used for each requirement. The solution must recover the data in the minimum amount of time.

What should you recommend?

Components	Answer Area
Microsoft SQL Server backup	A document that a user deleted 15 days ago must be recovered. <input type="text" value="Component"/>
Recycle Bin	
versioning	A site collection that was deleted 20 days ago must be recovered. <input type="text" value="Component"/>

Point and Shoot:

Components	Answer Area
Microsoft SQL Server backup	A document that a user deleted 15 days ago must be recovered. <input type="text" value="Recycle Bin"/>
Recycle Bin	
versioning	A site collection that was deleted 20 days ago must be recovered. <input type="text" value="Microsoft SQL Server backup"/>

Correct Answer:

Components	Answer Area
Microsoft SQL Server backup	A document that a user deleted 15 days ago must be recovered. <input type="text" value="Recycle Bin"/>
Recycle Bin	
versioning	A site collection that was deleted 20 days ago must be recovered. <input type="text" value="Microsoft SQL Server backup"/>

QUESTION 24

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms. The farms will be configured as shown in the following table.

Farm name	Farm configuration
Farm1	Dedicated to hosting shared services
Farm2	Dedicated to hosting content for the human resources department
Farm3	Dedicated to hosting content for the finance department

<http://www.gratisexam.com/>

You identify the following deployment requirements:

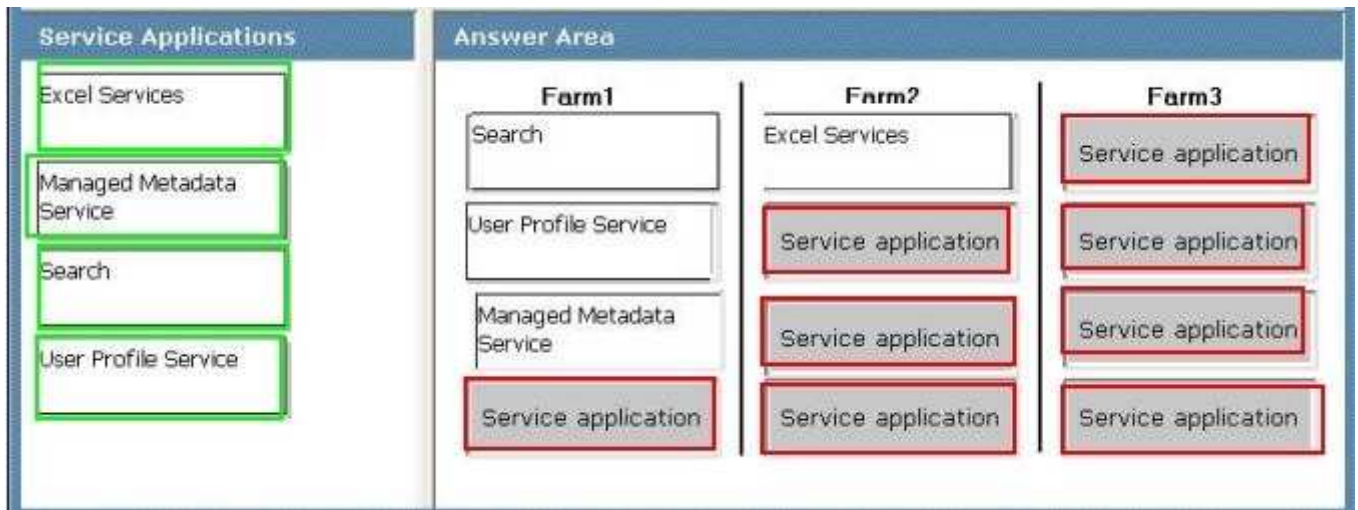

- Users in the finance department must be able to search for finance content, to manage their user profile, and to use term stores.
- Users in the human resources department must be able to manage their user profile and to view Microsoft Excel files by using a web browser.

You need to identify which service application or service applications must be deployed to each

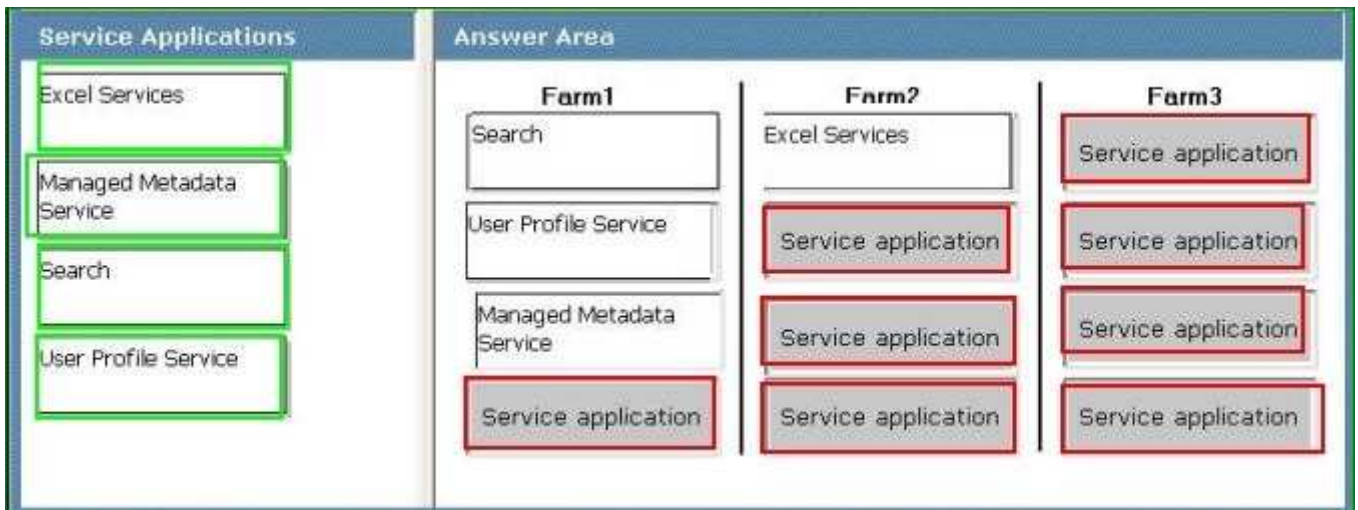

Which service applications should you identify?

Service Applications	Answer Area		
	Farm1	Farm2	Farm3
Excel Services	Service application	Service application	Service application
Managed Metadata Service	Service application	Service application	Service application
Search	Service application	Service application	Service application
User Profile Service	Service application	Service application	Service application

Point and Shoot:

Correct Answer:

Section: (none)

Explanation

QUESTION 25

Your company uses Microsoft SharePoint Online and SharePoint Server 2010 Service Pack (SP1) on-premises.

The corporate usage policy states that SharePoint Online must be used whenever possible. You plan to implement three sites named Site1, Site2, and Site3.

The sites have the following requirements:

- The users of Site1 must be able to create PerformancePoint dashboards,
- The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
- The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

You need to recommend in which SharePoint environment to create each site.

What should you recommend?

SharePoint Environments	Answer Area
<input type="text" value="SharePoint on-premises"/>	<input type="text" value="Environment"/> The users of Site1 must be able to create PerformancePoint dashboards.
<input type="text" value="SharePoint Online"/>	<input type="text" value="Environment"/> The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
	<input type="text" value="Environment"/> The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

Point and Shoot:

SharePoint Environments	Answer Area
<input type="text" value="SharePoint on-premises"/>	<input type="text" value="SharePoint on-premises"/> The users of Site1 must be able to create PerformancePoint dashboards.
<input type="text" value="SharePoint Online"/>	<input type="text" value="SharePoint Online"/> The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
	<input type="text" value="SharePoint Online"/> The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

Correct Answer:

SharePoint Environments	Answer Area
<input type="text" value="SharePoint on-premises"/>	<input type="text" value="SharePoint on-premises"/> The users of Site1 must be able to create PerformancePoint dashboards.
<input type="text" value="SharePoint Online"/>	<input type="text" value="SharePoint Online"/> The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.
	<input type="text" value="SharePoint Online"/> The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

QUESTION 26

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. Collection1 contains a content type named CT1.

You need to recommend a content management strategy to meet the following requirements:

- Log the name of each user who opens documents that use CT1.

- Automatically route documents that use CT1 to a document library named Legal.

What should you include in the recommendation?

Components	Answer Area
an information management policy	Component Log the name of each user who opens documents that use CT1.
Information Rights Management (IRM)	Component Automatically route documents that use CT1 to a document library named Legal.
the Content Type Syndication Hub	
the Record Center	

Point and Shoot:

Components	Answer Area
an information management policy	an information management policy Log the name of each user who opens documents that use CT1.
Information Rights Management (IRM)	the Record Center Automatically route documents that use CT1 to a document library named Legal.
the Content Type Syndication Hub	
the Record Center	

Correct Answer:

Components	Answer Area
an information management policy	an information management policy Log the name of each user who opens documents that use CT1.
Information Rights Management (IRM)	
the Content Type Syndication Hub	
the Record Center	the Record Center Automatically route documents that use CT1 to a document library named Legal.

QUESTION 27

You have four SharePoint Server 2007 Service Pack 2 (SP2) server farms. The farms are configured as shown in the following table.

Farm name	Farm servers
Farm1	<ul style="list-style-type: none"> One server that runs Windows Server 2003 x64 and has SharePoint Server installed One server that has Microsoft SQL Server 2008 installed
Farm2	<ul style="list-style-type: none"> One server that runs Windows Server 2008 x64 and has SharePoint Server installed One server that has Microsoft SQL Server 2005 SP2 installed
Farm 3	<ul style="list-style-type: none"> One server that runs Windows Server 2008 x64 and has SharePoint Server installed One server that has Microsoft SQL Server 2008 R2 installed

You plan to migrate each farm to SharePoint Server 2010 Service Pack 1 (SP1).

You need to identify the migration strategy for each farm. The solution must minimize the amount of time required to migrate the farms.

Which migration strategy should you select for each farm?

To answer, drag the appropriate strategy to the correct farm in the answer area.

Strategies	Answer Area
database attach	Farm1 Strategy
in-place upgrade	Farm2 Strategy
	Farm3 Strategy

Point and Shoot:

Strategies	Answer Area
database attach	Farm1 database attach
in-place upgrade	Farm2 database attach
	Farm3 in-place upgrade

Correct Answer:

Strategies	Answer Area
database attach	Farm1 database attach
in-place upgrade	Farm2 database attach
	Farm3 in-place upgrade

QUESTION 28

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two

The servers are configured as shown in the following table.

Server name	Server configuration
SQL1	Microsoft SQL Server
WFE1	Front-end Web server

You need to add an additional server to the farm. The new server will host the following service applications:

- User Profile Service
- Excel Calculation Services
- Managed Metadata Web Service

What should you do?

Actions	Answer Area
Create a new web application.	
Configure server name mappings.	
Run the Farm Configuration Wizard.	
Configure alternate access mappings.	
Run the SharePoint Products Configuration Wizard.	
Install SharePoint Server 2010 SP1 on a new server.	

Point and Shoot:

Actions	Answer Area
Create a new web application.	Install SharePoint Server 2010 SP1 on a new server.
Configure server name mappings.	Run the SharePoint Products Configuration Wizard.
Run the Farm Configuration Wizard.	Configure server name mappings.
Configure alternate access mappings.	
Run the SharePoint Products Configuration Wizard.	
Install SharePoint Server 2010 SP1 on a new server.	

Correct Answer:

Actions	Answer Area
Create a new web application.	Install SharePoint Server 2010 SP1 on a new server.
Configure server name mappings.	Run the SharePoint Products Configuration Wizard.
Run the Farm Configuration Wizard.	Configure server name mappings.
Configure alternate access mappings.	
Run the SharePoint Products Configuration Wizard.

QUESTION 29

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

Server name	Server configuration
Server1	SharePoint Server 2010 SP1
SQL1	Microsoft SQL Server 2008 R2 that has only the database engine component installed

You plan to generate reports by using SQL Server Reporting Services. The report definitions will be stored in SharePoint lists.

You need to recommend a deployment strategy.

What should you recommend?

Actions	Answer Area
Connect SQL1 to the farm.	
On SQL1, install the SQL Server 2008 R2 connectivity components.	
On Server1, install the SQL Server 2008 R2 connectivity components.	
From Central Administration, configure the Reporting Services Integration settings.	
From SQL1, install SharePoint Server 2010 SP1.	
From SQL1, install the Reporting Services component by using native mode.	
From SQL1, install the Reporting Services component by using SharePoint integrated mode.	

Point and Shoot:

Actions	Answer Area
Connect SQL1 to the farm.	From SQL1, install the Reporting Services component by using SharePoint integrated mode.
On SQL1, install the SQL Server 2008 R2 connectivity components.	
On Server1, install the SQL Server 2008 R2 connectivity components.	From SQL1, install SharePoint Server 2010 SP1.
From Central Administration, configure the Reporting Services Integration settings.	Connect SQL1 to the farm.
From SQL1, install SharePoint Server 2010 SP1.	
From SQL1, install the Reporting Services component by using native mode.	From Central Administration, configure the Reporting Services Integration settings.
From SQL1, install the Reporting Services component by using SharePoint integrated mode.	

Correct Answer:

Actions	Answer Area
Connect SQL1 to the farm.	From SQL1, install the Reporting Services component by using SharePoint integrated mode.
On SQL1, install the SQL Server 2008 R2 connectivity components.	
On Server1, install the SQL Server 2008 R2 connectivity components.	From SQL1, install SharePoint Server 2010 SP1.
From Central Administration, configure the Reporting Services Integration settings.	Connect SQL1 to the farm.
From SQL1, install SharePoint Server 2010 SP1.	
From SQL1, install the Reporting Services component by using native mode.	From Central Administration, configure the Reporting Services Integration settings.
From SQL1, install the Reporting Services component by using SharePoint integrated mode.

QUESTION 30

You plan to deploy two SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1 and Farm2.

Farm1 will host shared services.

Farm2 will host content.

You need to ensure that Farm2 can use the services in Farm1.

What should you do?

Actions	Answer Area
Exchange trust certificates between the farms.	
On Farm1, publish service applications.	
On Farm1, modify the Send To Connections.	
On Farm2, modify the Send To Connections.	
On Farm2, connect to the service applications.	
On Farm1, configure cross-firewall access zones.	
Modify the permissions of the service applications.	

Point and Shoot:

Actions	Answer Area
Exchange trust certificates between the farms.	Exchange trust certificates between the farms.
On Farm1, publish service applications.	
On Farm1, modify the Send To Connections.	Modify the permissions of the service applications.
On Farm2, modify the Send To Connections.	
On Farm2, connect to the service applications.	On Farm1, publish service applications.
On Farm1, configure cross-firewall access zones.	
Modify the permissions of the service applications.	On Farm2, connect to the service applications.

Correct Answer:

Actions	Answer Area
Exchange trust certificates between the farms.	Exchange trust certificates between the farms.
On Farm1, publish service applications.	Modify the permissions of the service applications.
On Farm1, modify the Send To Connections.	On Farm1, publish service applications.
On Farm2, modify the Send To Connections.	On Farm2, connect to the service applications.
On Farm2, connect to the service applications.	
On Farm1, configure cross-firewall access zones.	
Modify the permissions of the service applications.

QUESTION 31

You are designing a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

Corporate security policy states that only required ports must be open on servers.

You need to identify which communication ports must be open for the following operations:

- Crawling SMB file shares
- Accessing data from Microsoft SQL Server content databases
- Communicating between front-end Web servers and application servers

Which ports should you identify?

Ports	Answer Area
25	Port Crawling SMB file shares
389	Port Accessing data from Microsoft SQL Server content databases
445	Port Communicating between front-end Web servers and application servers
1433	
32843	

Point and Shoot:

Ports	Answer Area
<input type="text" value="25"/> <input type="text" value="389"/> <input type="text" value="445"/>	<input type="text" value="445"/> Crawling SMB file shares
<input type="text" value="1433"/> <input type="text" value="32843"/>	<input type="text" value="1433"/> Accessing data from Microsoft SQL Server content databases
	<input type="text" value="32843"/> Communicating between front-end Web servers and application servers

Correct Answer:

Ports	Answer Area
<input type="text" value="25"/> <input type="text" value="389"/> <input type="text" value="445"/>	<input type="text" value="445"/> Crawling SMB file shares
<input type="text" value="1433"/> <input type="text" value="32843"/>	<input type="text" value="1433"/> Accessing data from Microsoft SQL Server content databases

QUESTION 32

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

- High availability of the server
- Maximum response time

What should you do?

Create a search component in the farm.

Install a single application server that has all service components.

Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.

Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.

Install SharePoint Server 2010 Service Pack 1 (SP1) Standard on all intended servers in the farm by using the **/Complete** farm option.

Install SharePoint Server 2010 Service Pack 1 (SP1) Enterprise on all intended servers in the farm by using the **/Complete** farm option.

Set up the farm to include the following components:

- A single application server that has all service components except search
- A connection to a database server that contains Search databases
- A second database server that contains the SharePoint Central Administration database

Point and Shoot:

Create a search component in the farm.

Install a single application server that has all service components.

Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.

Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.

Install SharePoint Server 2010 Service Pack 1 (SP1) Standard on all intended servers in the farm by using the **/Complete** farm option.

Install SharePoint Server 2010 Service Pack 1 (SP1) Enterprise on all intended servers in the farm by using the **/Complete** farm option.

Set up the farm to include the following components:

- A single application server that has all service components except search
- A connection to a database server that contains Search databases
- A second database server that contains the SharePoint Central Administration database

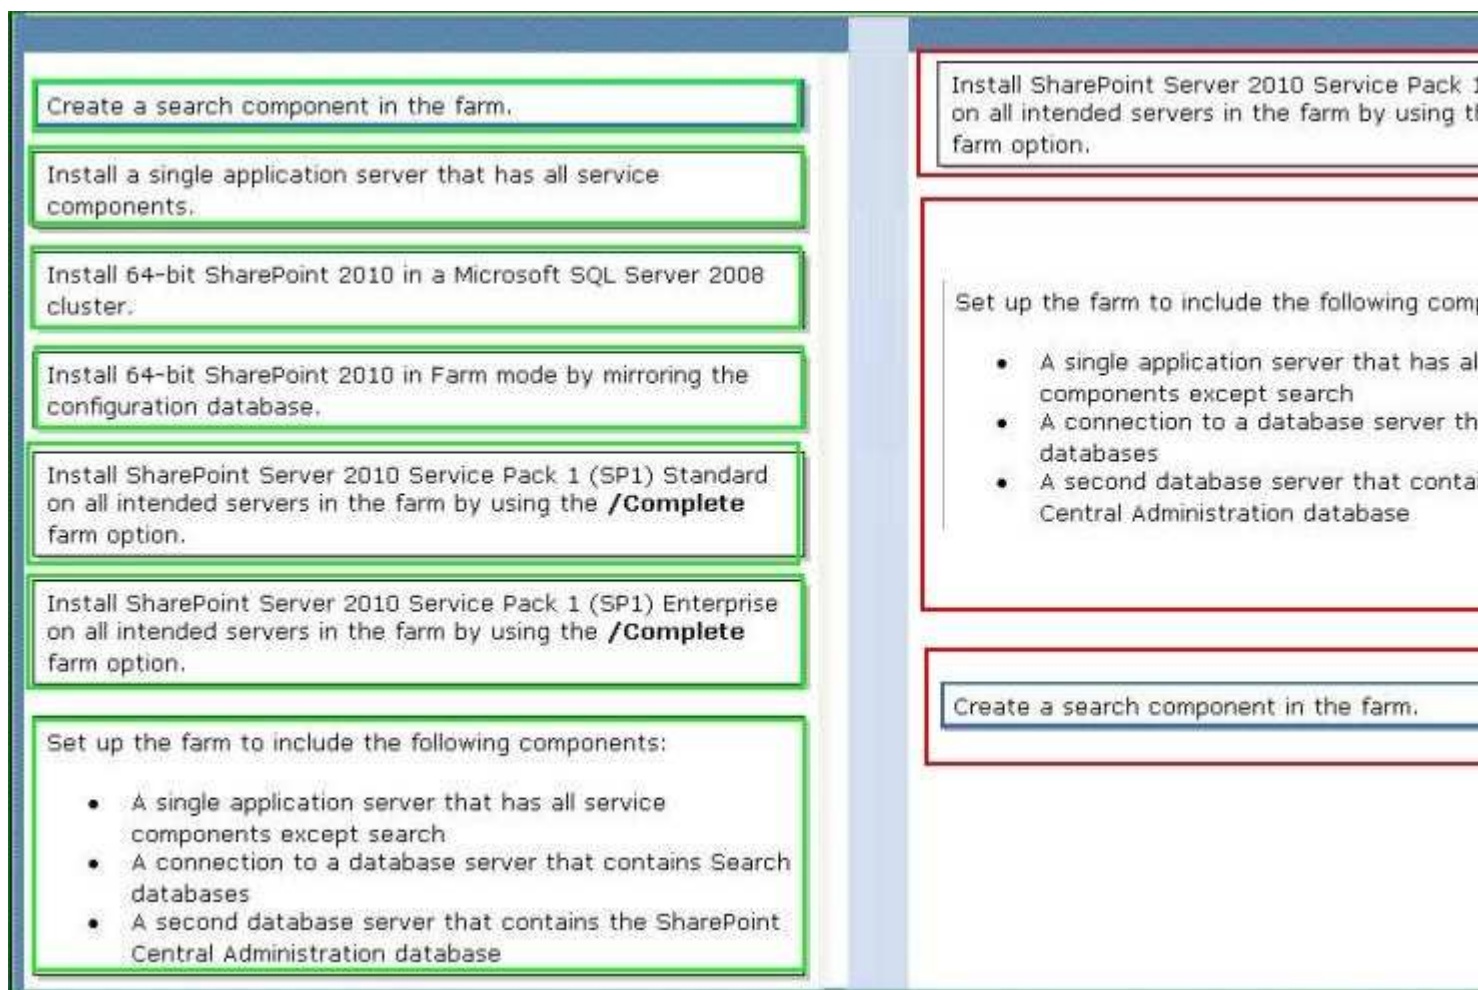

Install SharePoint Server 2010 Service Pack 1 (SP1) on all intended servers in the farm by using the **/Complete** farm option.

Set up the farm to include the following components:

- A single application server that has all service components except search
- A connection to a database server that contains Search databases
- A second database server that contains the SharePoint Central Administration database

Create a search component in the farm.

QUESTION 33

You have a SharePoint Server 2007 server farm that contains four servers. The servers are configured as shown in the following table.

Server name	Server operating system	Server configuration
APP1	64-bit version of Windows Server 2008	SharePoint Server 2007 Service Pack 1 (SP1)
SQL1	64-bit version of Windows Server 2008	Microsoft SQL Server 2005 Service Pack 1 (SP1)
WFE1	Windows Server 2003 x64	SharePoint Server 2007 Service Pack 1 (SP1)
WFE2	64-bit version of Windows Server 2008	SharePoint Server 2007 Service Pack 1 (SP1)

You need to recommend which steps are required to upgrade the farm to SharePoint Server 2010 SP1.

Which steps should you recommend?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Decommission WFE1.	
Upgrade SQL1 to SQL Server 2008 R2.	
Install SharePoint Server 2010 SP1 on SQL1.	
Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.	
Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.	

Point and Shoot:

Actions	Answer Area
Decommission WFE1.	Decommission WFE1.
Upgrade SQL1 to SQL Server 2008 R2.	
Install SharePoint Server 2010 SP1 on SQL1.	Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.
Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.	Upgrade SQL1 to SQL Server 2008 R2.
Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.	Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.

Correct Answer:

Actions	Answer Area
Decommission WFE1.	Decommission WFE1.
Upgrade SQL1 to SQL Server 2008 R2.	
Install SharePoint Server 2010 SP1 on SQL1.	Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.
Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.	Upgrade SQL1 to SQL Server 2008 R2.
Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.	Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.

QUESTION 34

You are planning the taxonomy of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

- The legal department will require a list view threshold of 1,000 items.
- The accounting department will require a list view threshold of 2,000 items.
- The manufacturing department will require a list view threshold of 1,000 items.

You need to identify the minimum number of web applications and site collections that must be created to meet the requirements.

How many web applications and site collections should you identify?

To answer, configure the appropriate number of web applications and site collections in the answer area.

Answer Area

Web application(s)	0
Site collection(s)	0

Point and Shoot:

Answer Area

Web application(s)	0
Site collection(s)	0

Correct Answer:

Answer Area	
Web application(s)	0
Site collection(s)	0

QUESTION 35

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. Collection1 contains a content type named CT1.

You need to recommend a content management strategy to meet the following requirements:

- Automatically route documents that use CT1 to a document library named Legal.
- Prevent users from printing documents in the Legal document library.

What should you include in the recommendation?

To answer, drag the appropriate component to the correct requirement in the answer area.

Components	Answer Area
an information management policy	Component Automatically route documents that use CT1 to a document library named Legal.
Information Rights Management (IRM)	Component Prevent users from printing documents that are in the Legal document library.
the Content Type Syndication Hub	
the Record Center	

Point and Shoot:

Components	Answer Area
an information management policy	the Record Center Automatically route documents that use CT1 to a document library named Legal.
Information Rights Management (IRM)	Information Rights Management (IRM) Prevent users from printing documents that are in the Legal document library.
the Content Type Syndication Hub	
the Record Center	

Correct Answer:

Components	Answer Area
an information management policy	the Record Center Automatically route documents that use CT1 to a document library named Legal.
Information Rights Management (IRM)	Information Rights Management (IRM) Prevent users from printing documents that are in the Legal document library.
the Content Type Syndication Hub	
the Record Center

QUESTION 37

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You create a custom site column named SCI.

Users are allowed to enter any value in SCI.

You need to modify the search infrastructure to meet the following requirements:

- Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
- Users must be able to search for items that have a specific value in SCI.

You need to recommend which SharePoint technology must be implemented to meet the requirements.

What should you recommend?

Technologies	Answer Area
<input type="text" value="Audiences"/>	<input type="text" value="Technology"/> Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
<input type="text" value="Managed Properties"/>	<input type="text" value="Technology"/> Users must be able to search for items that have a specific value in SC1.
<input type="text" value="Search Federation"/>	
<input type="text" value="Search Scopes"/>	
<input type="text" value="Term Stores"/>	

Point and Shoot:

Technologies	Answer Area
<input type="text" value="Audiences"/>	<input type="text" value="Search Scopes"/> Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
<input type="text" value="Managed Properties"/>	<input type="text" value="Managed Properties"/> Users must be able to search for items that have a specific value in SC1.
<input type="text" value="Search Federation"/>	
<input type="text" value="Search Scopes"/>	
<input type="text" value="Term Stores"/>	

Correct Answer:

Technologies	Answer Area
<input type="text" value="Audiences"/>	<input type="text" value="Search Scopes"/> Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.
<input type="text" value="Managed Properties"/>	<input type="text" value="Managed Properties"/> Users must be able to search for items that have a specific value in SC1.

QUESTION 39

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains an Excel Services service application.

You plan to display a Microsoft Excel file in a Web Part. The Excel file will be stored on a file server and will contain custom calculations written in Microsoft Visual Studio.

You need to identify which Excel Services configuration must be configured to display the Excel file.

What should you configure?

Configurations	Answer Area
a trusted data connection library	Stored on a file server <input type="button" value="Configuration"/>
a trusted data provider	Contain custom calculations written in Visual Studio <input type="button" value="Configuration"/>
a trusted file location	
a user-defined function assembly	

Point and Shoot:

Configurations	Answer Area
a trusted data connection library	Stored on a file server a trusted file location
a trusted data provider	Contain custom calculations written in Visual Studio a user-defined function assembly
a trusted file location	
a user-defined function assembly	

Correct Answer:

Configurations	Answer Area
a trusted data connection library	Stored on a file server a trusted file location
a trusted data provider	Contain custom calculations written in Visual Studio a user-defined function assembly
a trusted file location	
a user-defined function assembly

QUESTION 40

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

- Farm1 will host shared service applications.
- Farm2 will host content for the human resources department. The farm content will be searchable.
- Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

- Server virtualization will not be used.
- Farm1 must host service applications whenever possible.
- The service applications must not run on servers that host webpages for end users.
- The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers should you identify?

Answer Area

Farm name	Number of servers
Farm1	<input type="text" value="0"/>
Farm2	<input type="text" value="0"/>
Farm3	<input type="text" value="0"/>

Point and Shoot:

Answer Area

Farm name	Number of servers
Farm1	<input type="text" value="2"/>
Farm2	<input type="text" value="4"/>
Farm3	<input type="text" value="4"/>

Correct Answer:

Answer Area	
Farm name	Number of servers
Farm1	2
Farm2	4
Farm3	4

QUESTION 41

You have a SharePoint Server 2010 Service Pack I (SP1) server farm.

You need to recommend which tools must be used to recover deleted pages, deleted document libraries, and deleted permission levels. The solution must use the minimum amount of administrative effort.

Which tool should you use for each type of content?

Tools	Answer Area
Microsoft SQL Server backups	Pages: Tool
Recycle Bin	Document libraries: Tool
Windows Server Backup	Permission levels: Tool

Point and Shoot:

Tools	Answer Area
Microsoft SQL Server backups	Pages: Recycle Bin
Recycle Bin	Document libraries: Recycle Bin
Windows Server Backup	Permission levels: Microsoft SQL Server backups

Correct Answer:

Tools	Answer Area
Microsoft SQL Server backups	Pages: Recycle Bin
Recycle Bin	Document libraries: Recycle Bin
Windows Server Backup	Permission levels: Microsoft SQL Server backups

Section: (none)

Explanation

QUESTION 42

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You need to deploy a custom site to the top site of a site collection on the production farm.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Tools	Answer Area
Upload and activate the STP file.	
Upload and activate the WSP file.	
Save the custom site as a site template.	
Export the custom site as a site definition.	
Create a site collection by using an empty site.	
Create a site collection by using the blank template.	

Point and Shoot:

Upload and activate the STP file.	 	Save the custom site as a site template.
Upload and activate the WSP file.		Upload and activate the WSP file.
Save the custom site as a site template.		Create a site collection by using the blank template.
Export the custom site as a site definition.		
Create a site collection by using an empty site.		
Create a site collection by using the blank template.		

Correct Answer:

Upload and activate the STP file.	 	Save the custom site as a site template.
Upload and activate the WSP file.		Upload and activate the WSP file.
Save the custom site as a site template.		Create a site collection by using the blank template.
Export the custom site as a site definition.		
Create a site collection by using an empty site.		
Create a site collection by using the blank template.

Exam B

QUESTION 1

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a solution that provides users with the ability to update their user attributes in Active Directory.

What should you recommend?

Exhibit:

Northwind Traders

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. a User Profile Service Application
- B. Active Directory Federation Services (AD FS)
- C. Business Connectivity Services
- D. Active Directory Rights Management Services (AD RMS)

Correct Answer: A

Section: (none)
Explanation

QUESTION 4

You are a SharePoint administrator for Northwind Traders.

The company has 20,000 employees distributed across 11 different departments.

You plan to implement a SharePoint Server 2010 server farm for internal collaboration.

You need to recommend a strategy to manage access to SharePoint content. You must achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

Exhibit:

Northwind Traders

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

- User attributes are stored in Active Directory.
- Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

- Custom workflows must be reused across multiple document libraries.
- Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.
- The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Databases must not exceed 100GB.
- SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.
- All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.
- To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwind Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

- All users in the same department must share the same level of access to site content.
- Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

- All customizations must be authored by a single team of developers.
- All customizations must be deployed by the site collection administrators.

- A. Configure Managed Accounts.
- B. Implement Active Directory Lightweight Directory Services (AD LDS).
- C. Add Active Directory Groups to SharePoint Groups.
- D. Create User Policies and Permission Policies for the Web Application.

Correct Answer: C

QUESTION 5

You are a SharePoint administrator for Litware, Inc.

The company has a main office and a branch office. The company has 14,000 employees.

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

You need to design an authentication solution to provide users with access to the SharePoint sites from the

Internet.

What should you include in the solution?

Exhibit:

Litware Inc

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.

The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

- Litware has the following security requirements for the planned SharePoint Server 2010

Deployment

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. The Secure Store Service Application
- B. Active Directory Rights Management Service (AD RMS)
- C. Active Directory Certificate Services
- D. The Access Services Service Application

Correct Answer: C

Section: (none)

QUESTION 6

You are a SharePoint administrator for Litware, Inc.

The company has a main office and a branch office. The company has 14,000 employees.

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm.

You need to recommend a data recovery strategy that meets the company's compliance requirements. The strategy must use the minimum amount of administrative effort.

What should you include in the strategy?

Exhibit:

Litware Inc

Network Configurations

Litware has the following network configurations:

- The main office contains multiple servers.
- Litware has Microsoft System Center Data Protection Manager deployed.
- The main office connects to the branch offices by using a slow WAN link.
- The branch office contains a file server. The file server contains numerous files that are frequently updated.

The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint. Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

- Users must not be able to print confidential documents that are stored in SharePoint sites.
- Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

- Litware has the following security requirements for the planned SharePoint Server 2010

Deployment

- Only required TCP/IP ports must be opened on the firewall.
- Access to the SharePoint sites via the Internet must use client Certificates authentication.
- Users on the internal network must use Kerberos authentication to access the SharePoint sites.
- User authorization management must require the minimum amount of configuration and ongoing maintenance.

- A. Microsoft SQL Server Differential Backups
- B. SharePoint Recycle Bin
- C. SharePoint Granular Backups
- D. Microsoft SQL Server Database Snapshots

Correct Answer: B

Section: (none)

QUESTION 11

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various partner

companies.

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to identify the minimum number of site collections required for the planned deployment of SharePoint Server 2010.

How many site collections should you identify?

Exhibit:

Contoso Ltd

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. 3
- B. 10
- C. 13
- D. 1

Correct Answer: B

QUESTION 15

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

You need to recommend a solution to grant partner company employees access to the extranet.

What should you include in the solution?

Exhibit:

Contoso Ltd

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Forms-based authentication and Active Directory Lightweight Directory Services (AD LDS)
- B. Forms-based authentication and the Application Layer Gateway Service (ALG)
- C. Integrated Windows authentication and Active Directory Rights Management Services (AD RMS)

D. Integrated Windows authentication and Active Directory Federation Services (AD FS)

Correct Answer: A

Section: (none)

QUESTION 16

You are a SharePoint administrator for Contoso, Ltd.

The company has 2,000 employees and 500 external users who work at the offices of various partner companies.

You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company.

During capacity testing, you discover that InfoPath user sessions are forcibly terminated, resulting in the loss of form data.

You need to recommend a solution to support the required number of connections for InfoPath Forms Services.

What should you recommend?

Exhibit:

Contoso Ltd

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

- The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments.
- Each departmental site must have its own database.
- Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the departmental sites. The dashboards must consume data from the OLAP cubes.
- The site must support as many as 500 concurrent connections for InfoPath Forms Services.
- Per-user identity authentication must be used for PerformancePoint Services.
- My Sites must be created as a separate Web application.
- My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

- The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.
- Partner company employees must be able to create secure collaboration sites and site collections easily.
- Partner company employees must not have accounts in the Contoso Active Directory forest.
- The extranet site must be created as a separate Web application.
- Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet. Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

- A. Distribute InfoPath forms in multiple form libraries.
- B. Configure page output caching.
- C. Create a new Secure Store Service application.
- D. Add a State Service database.

Correct Answer: D

QUESTION 17

You are a SharePoint administrator for Blue Yonder Airlines.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to recommend a solution for migrating all PerformancePoint 2007 objects to SharePoint Server 2010.

What should you include in the solution?

Exhibit:

Blue Yonder Airlines

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements for Upgrade

Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

- All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

- Users must be able to access all documents during the upgrade process.

- A. The Import PerformancePoint Server 2007 Content wizard
- B. SharePoint Designer 2010
- C. The Import Application Definition File wizard
- D. PerformancePoint Dashboard Designer

Correct Answer: A

Section: (none)

QUESTION 18

You are a SharePoint administrator for Blue Yonder Airlines.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

You need to increase the available disk space on Server1 and Server2 before you upgrade the farm.

What should you do?

Exhibit:

Blue Yonder Airlines

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

- Two Shared Services Providers
- Two Web applications named Web1 and Web2
- A 500-GB site collection in Web1
- A 700-GB site collection in Web2
- Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements for Upgrade

Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Users must be able to access upgraded and non-upgraded sites during the upgrade process.
- All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

- All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

- Users must be able to access all documents during the upgrade process.

- A. Take all of the content databases offline.
- B. Shrink the content database files.
- C. Reset the indexes and perform a full crawl.
- D. Activate the Content Organizer on all of the site collections.

Correct Answer: A

QUESTION 22

You are a SharePoint administrator for Graphic Design Institute.

The institute has five departments. Each department offers 20 courses.

You plan to deploy SharePoint Server 2010 on the network.

You need to recommend a maintenance plan for the content databases that meets the institute's database

requirements.

What should you include in the recommendations?

Exhibit:

Graphic design institute

Technical Requirements

Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.
- Each course site must contain a custom Web Part that retrieves data from a metadata search.
- Each course site must contain a custom navigation bar.
- Each course site must contain a proprietary file type.
- The load time for each course site must be minimized.

Database Requirements

Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:

- The latency of search queries for metadata searches must be minimized.
- The server farm configuration must be backed up weekly.
- White space in the content databases must be minimized.
- The number of databases must be minimized.

Student Requirements

Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:

- Students must be able to manage and organize content that is relevant to them.
- Students must be able to share documents with other students.

Security Requirements

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

- Each department must be able to manage the security of its respective course sites.
- Each department must be able to manage its respective recycle bin.

- A. Shrink the database every six months.
- B. Defragment the hard disk drives of the Web server every three months.
- C. Reset the search indexes every three months.
- D. Defragment the hard disk drives of the Web server every six months.

Correct Answer: A

QUESTION 28

You are a SharePoint administrator for Wide World Importers.

You migrate all of the documents from the partner company to a new Web application. You configure the Web application to use Forms-based authentication.

You discover that search results exclude the migrated documents. The search results include all other documents.

You need to ensure that the search results include all of the migrated documents.

What should you create?

Exhibit:

Wide World Importers

Current Environment

The company uses Windows Server 2008 Hyper-V for server virtualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

Planned Server Configuration

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. a crawl rule
- B. a search scope
- C. a host distribution rule
- D. a crawler impact rule

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 29

You are a SharePoint administrator for Wide World Importers.

You need to identify the minimum number of Hyper-V servers required for the planned deployment of SharePoint Server 2010.

How many servers should you identify?

Exhibit:

Wide World Importers

Current Environment

The company uses Windows Server 2008 Hyper-V for server virtualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

Planned Server Configuration

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint -Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. 3
- B. 5
- C. 1
- D. 2

Correct Answer: D

Section: (none)

The company uses Windows Server 2008 Hyper-V for server virtualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

Planned Server Configuration

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint-Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All documents must be migrated from the partner company to SharePoint-Farm.
- All migrated documents must be read-only.
- Access to the migrated documents must use Forms-based authentication.
- Access to all other SharePoint content must use Windows authentication.
- If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint Farm:

- Crawl queue
- Query latency
- Crawl rate per type

- A. Read-only databases
- B. Information Rights Management (IRM)
- C. Site Collection policies
- D. Offline databases

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 32

You are a SharePoint administrator for Wide World Importers.

You need to ensure that users can receive search results for all content in the organization if a single server fails.

What should you do?

Exhibit:

Trey Research

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

The current environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts.

SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.
- Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections.

You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment.

Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

- A. Add a new crawl component.
- B. Create multiple server name mappings.
- C. Implement query component mirroring.
- D. Implement host distribution rules.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 33

You are a SharePoint administrator for Wide World Importers.

You need to recommend a solution to ensure that new content added to the SharePoint sites is included in all search results within 30 minutes of being added.

What should you include in the solution?

Exhibit:

Trey Research

Server Configurations

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

The current environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts.

SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

- Human resources department documents must only be accessible to users in the human resources department.
- Accounting department documents must only be accessible to users in the accounting department.
- Users in each department must be able to create and use their own search scopes.

QUESTION 39

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

You need to recommend a solution to filter the search results based on product category.

What should you include in the solution?

Exhibit:

Tailspin Toys

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall.

The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2. The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008.

Server3 hosts a SharePoint content database named SQL_SharePoint. Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers.

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys. The products are classified in SQL_Toys by Category.

SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

- Support anonymous access.
- Ensure that users can search for products by using SharePoint search.
- Ensure that users can filter searches based on product category.
- Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.
- Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

- Server2 must be used to index content.
- Server1 must be used for user searches.
- Content from the SQL_Toys database must be accessible from the SharePoint sites.
- Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

- Encrypt all access to pricing information.
- Ensure that the SQL Servers are on the internal network.
- Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

- A. content sources
- B. host distribution rules
- C. authoritative pages
- D. managed properties

Correct Answer: D

Section: (none)

Explanation

QUESTION 43

You are a SharePoint administrator for Adventure Works.

You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site.

You need to recommend a solution to convert the catalogs.

What should you include in the solution?

Exhibit:

Adventure Works

Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Microsoft SharePoint Designer
- B. InfoPath Forms Services
- C. Word Automation Services
- D. Access Services

Correct Answer: C

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.
- Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.
- Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

- A. Three Web servers and two Web applications
- B. One Web server and one Web application
- C. Two Web servers and one Web application
- D. One Web server and two Web applications

Correct Answer: C

Section: (none)

QUESTION 48

You are a SharePoint administrator for A. Datum Corporation.

The company has a main office and a branch office.

The company has 2,000 users.

You need to design a search solution to meet the company's user requirements. Your solution must minimize costs.

What should you include in the design?

Exhibit:

Adventure Works

Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

- The public Web site must be available if a single server fails.
- E-mail enabled document libraries must not be used on the public Web site.
- E-mail-enabled document libraries must be used internally for content collaboration.
- Internal users must be able to search both internal content and public site content from a single Web Part.
- A denial-of-service attack on the public site must not prevent internal users from collaborating on content.
- Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

- SharePoint user solutions must not be deployed on the public site.
- Users who connect to the public site must be denied access to the company's internal resources.
- SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

- Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.

QUESTION 54

You are a SharePoint administrator for Lucerne Publishing.

You need to recommend a backup strategy for the content in a SharePoint site collection. The strategy must meet the following requirements:

- Adhere to the company's business requirements.
- Minimize the amount of time required to restore the entire server farm.

What should you include in the backup strategy?

Exhibit:

Lucerne Publishing

Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server.

You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

- No more than 144 hours of indexed content must be lost.
- The Search Service must be recovered within 36 hours.
- No more than 15 minutes of content must be lost.
- Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer's identification number.

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server. You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.
- The reports must contain an aggregated view of all system and application event errors.

Development Process

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

Security Requirements

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

- A. granular backups and Microsoft SQL Server transaction log backups
- B. full farm backups and granular backups
- C. full farm backups and Microsoft SQL Server transaction log backups
- D. full farm backups and differential farm backups

Correct Answer: C

QUESTION 59

You are a SharePoint administrator for Fabrikam, Inc.

You need to recommend a multilingual solution for the Tokyo office users. You must achieve this goal by using the minimum amount of administrative effort.

What should you include in the solution?

Exhibit:

Fabrikam Inc

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP. These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese. The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

- All servers that contain data used by the public site must be physically isolated from the internal servers.

- A. variations and content deployment
- B. language packs and variations
- C. a new site for the Tokyo users and language packs
- D. a new site for the Tokyo users and content deployment

Correct Answer: B

Exhibit:

Fabrikam Inc

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

- Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP. These documents must be grouped logically and must share metadata.
- Users must be able to access all RFP documents from a Welcome Page.
- Some of the content on the intranet site must be published automatically to the public site.
- The intranet site and the public site must have the same taxonomy.
- The taxonomy must be managed centrally.
- Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.
- Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese. The users must also be able to create content in Japanese.
- A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

- Administrators must be able to backup and restore the public site and the intranet site separately.
- Users must be able to access the intranet site and the public site if a single server fails.
- Backups must run automatically.

Security Requirements

- All servers that contain data used by the public site must be physically isolated from the internal servers.

- A. page scheduling
- B. content deployment
- C. SharePoint user solutions
- D. Microsoft SQL Server log shipping

Correct Answer: B

Section: (none)

QUESTION 62

You are a SharePoint administrator for Fabrikam, Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to recommend a solution to manage the taxonomy. You must achieve this goal by using the minimum amount of administrative effort.

What should you include in the solution?

Exhibit:

Fabrikam Inc

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

QUESTION 66

You are a SharePoint administrator for Fourth Coffee.

The company has 40 offices.

You need to implement an authentication solution that meets the company's security requirements.

What should you do?

Exhibit:

Fourth Coffee

Current Environment

Smart cards are deployed in the organization.

The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2.

The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

- All user search results must display a thumbnail preview.
- The server farm must be available if a single SQL server fails.
- The server farm must be available during server patch maintenance.
- Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

- A separate Service Level Agreement (SLA) must be provided for each office.
- Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

- All users must authenticate to the SharePoint server farm by using smart cards.

- A. Create a new Web application zone and create a new ISAPI filter.
- B. Create a new Web application zone and create an auto-enrollment policy for certificates.
- C. Enable SSL and configure certificate mapping.
- D. Enable SSL and create a new ISAPI filter.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 2

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains three servers named WFE1, WFE2, and APP1.

User requests are load balanced by using a hardware load balancer.

The farm contains a Business Data Connectivity Service service application. The service application is configured to run on APP1.

You plan to add a new server named APP2 to the farm.

You need to ensure that all requests to the Business Data Connectivity Service service application are load balanced between APP1 and APP2.

What should you do?

- A. Create a new Business Data Connectivity Service service application.
- B. Install Network Load Balancing (NLB) on APP2.
- C. Publish the Business Data Connectivity Service service application.
- D. Start the Business Data Connectivity Service service application on APP2.
- E. Add APP1 and APP2 to the hardware load balancer.

Correct Answer: D

Section: (none)

Explanation

QUESTION 4

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. You need to recommend a strategy to remove the draft versions from documents that were not modified for six months.

What should you include in the recommendation?

- A. Word Automation Services
- B. Site Quots and Locks
- C. Item Scheduling
- D. Site Collection Policies

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 5

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You need to implement an enterprise search technology that meets the following requirements:

- Allows users to search people and their expertise.
- Crawls content outside the SharePoint.
- Provides metadata-driven refinement in the top results.
- Provides phonetic searches.

Which search technology should you use?

- A. Search Server 2010 Express
- B. SharePoint Server 2010 Search
- C. User Profile Service
- D. FAST Search Server 2010 for SharePoint

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 6

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

Corporate security policy states that the password of each user account must be changed every three months.

You need to recommend a technology to ensure that the internal farm remains operational after the passwords change.

What should you include in the recommendation?

- A. Microsoft Visual Studio 2010
- B. the Access Services service application
- C. the Secure Store Service service application
- D. a BLOB cache
- E. Network Load Balancing (NLB)
- F. Information Rights Management (IRM)
- G. managed accounts
- H. SharePoint Health Analyzer
- I. Remote BLOB Storage (RBS)
- J. alternate access mappings
- K. Network Access Protection (NAP)
- L. Active Directory Federation Services (AD FS)
- M. service application groups
- N. an ASP.NET Membership Database
- O. cross-firewall access zones
- P. user policies

Correct Answer: G

Explanation

Explanation/Reference:

QUESTION 7

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You plan to deploy a sandbox solution in a production environment.

You need to identify the highest degree of isolation.

What should you do?

- A. Use local load balancing and run sandboxed solutions only on specific servers.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use remote load balancing and dedicate a separate server to run sandboxed solutions.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 8

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

The marketing department plans to upload large video files to the sites in WebApp2.

You need to recommend a solution to minimize the size of the content databases for WebApp2.

What should you include in the recommendation?

- A. an ASP.NET Membership Database
- B. Microsoft Visual Studio 2010
- C. a BLOB cache
- D. Active Directory Federation Services (AD FS)
- E. service application group
- F. the Secure Store Service service application
- G. user policies
- H. cross-firewall access zones
- I. SharePoint Health Analyzer
- J. Network Access Protection (NAP)
- K. alternate access mappings
- L. Information Rights Management (IRM)
- M. managed accounts
- N. the Access Services service application
- O. Network Load Balancing (NLB)
- P. Remote BLOB Storage (RBS)

Correct Answer: P

Section: (none)

Explanation

QUESTION 9

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to create a PerformancePoint dashboard in WebApp1. The dashboard will retrieve data from a SharePoint Online site.

You need to recommend a solution to ensure that the data is always retrieved from SharePoint Online by using an account named service@contoso.onmicrosoft.com. The solution must minimize the amount of custom development.

What should you include in the recommendation?

- A. Remote BLOB Storage (RBS)
- B. cross-firewall access zones
- C. Network Access Protection (NAP)
- D. Network Load Balancing (NLB)
- E. the Access Services service application
- F. a BLOB cache
- G. service application groups
- H. the Secure Store Service service application
- I. user policies
- J. Active Directory Federation Services (AD FS)
- K. Information Rights Management (IRM)
- L. SharePoint Health Analyzer
- M. alternate access mappings
- N. Microsoft Visual Studio 2010
- O. managed accounts
- P. an ASP.NET Membership Database

Correct Answer: O

Explanation/Reference:

QUESTION 12

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to deploy a site for the sales department and a site for the finance department.

You identify the following search requirements for each site:

- Content on the finance site must be indexed once daily.
- Content on the sales site must be indexed every 15 minutes.
- Each site must have independent search keywords and synonyms.

You need to recommend a logical structure to meet the search requirements of each site.

- A. One site collection, two sites, and two search scopes
- B. Two sites collections, two sites, and two search scopes
- C. Two sites collections, two sites, and two content sources
- D. One site collection, two sites, and two content sources

Correct Answer: C

QUESTION 13

You are the administrator for a SharePoint 2010 farm.

You plan to deploy a Web Part as a sandbox solution in a production environment.

You need to identify the highest degree of isolation.

What should you do?

- A. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use remote load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use local load balancing and run sandboxed solutions only on specific servers.

Correct Answer: C

Section: (none)

QUESTION 15

You have a SharePoint Server 2010 server farm that contains 10 Web servers.

You need to ensure that the processing of SharePoint user solutions is evenly distributed across the servers in

the farm.

What should you do in the server farm?

- A. Configure the Data Retrieval Service.
- B. Start the Sandboxed Code Service on all of the Web servers.
- C. Implement Windows Network Load Balancing on all of the web servers.
- D. Create a new Secure Store Service application.

Correct Answer: B

Section: (none)

Explanation

QUESTION 16

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff.

The network contains a single Active Directory domain.

You plan to deploy SharePoint Server 2010 to support both offices.

You need to recommend a solution that meets the following requirements:

- Network traffic across the WAN link must be minimized.
- All documents must be stored on servers located in the office where the documents were created.
- SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. a server farm in each office that has a Web server located in each office
- B. a single server farm that uses two site collections and a Web server in each office
- C. a server farm in each office and a search federation between the farms
- D. a single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 17

You plan to implement a SharePoint Server 2010 server farm. The farm will be used to store documents that are as much as 100 MB.

You need to recommend a search solution to meet the following requirements:

- Provide security-trimmed search results.
- Provide thumbnail previews of search results.
- Provide the ability to filter searches by using metadata.
- Minimize costs.

- A. Microsoft SharePoint search server
- B. Microsoft FAST Search Server
- C. Microsoft Search Server Express
- D. Microsoft SQL Server Full-Text Search

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 18

You have a SharePoint Server 2010 server farm.

Every night, you perform a full backup of the farm and a backup of all the SharePoint databases.

You are planning the recovery strategy for the Secure Store Service.

You need to identify which information is required to recover the Secure Store Service.

What should you identify?

- A. the Secure Store service passphrase
- B. the Central Administration application pool identity
- C. the Secure Store Service application pool identity
- D. the farm passphrase

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 19

You have a perimeter network and an internal network.

You plan to use SharePoint Server 2010 to host the company's public Web site.

You need to recommend a solution for the site that meets the following requirements:

- Content data must be stored inside the internal network.
- The number of servers must be minimized.

What should you include in the solution?

- A.
 - Deploy a Web server in the perimeter network.
 - Create a new Active Directory domain in the perimeter network.
 - Deploy a Microsoft SQL Server server in the internal network.
- B.
 - Deploy a Web server in the perimeter network.
 - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
 - Deploy a Microsoft SQL Server server in the internal network.
- C.
 - Deploy a Web server in the perimeter network.
 - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
 - Deploy a Microsoft SQL Server server in the perimeter network.

- D.
 - Deploy a Web server in the perimeter network.
 - Join the Web server to the internal Active Directory domain.
 - Deploy a Microsoft SQL Server server in the internal network.

Correct Answer: D

Section: (none)

QUESTION 20

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

- The farm must handle up to 15,000 users.
- The farm must be optimized for search and load balancing
- The farm must be cost-efficient.

Which farm deployment topology should you use?

- A.
 - A first web server that has the Query component
 - A second web server that has the Query component
 - A single application server that has all service components
 - A single database server that contains all SharePoint databases.
- B.
 - A first web server that has the Query component
 - A second web server that has the Query component
 - A single application server that has all other service components
 - A first database server that contains Search databases
 - A second database server that contains all other SharePoint databases
- C.
 - A first web server that does not have the Query component
 - A second web server that does not have the Query component
 - A third web server that has the Query component
 - A first application server that has the query and crawl component
 - A second application server that has all other application server components
 - A first database server that contains Search databases
 - A second database server that contains all other SharePoint databases
- D.
 - A first web server that has the Query component
 - A second web server that has the Query component and all other service components
 - A single database server that contains all SharePoint databases

Correct Answer: B

Section: (none)

Explanation

QUESTION 21

You have a SharePoint Server 2010 server farm. The farm contains the servers configured as shown in the following table.

Server name	Server role
Server1	Web
Server2	Web, query, crawl
Server3	Database

You need to ensure that Server2 never crawls SharePoint content through Server1.

What should you create?

- A. an alternate access mapping
- B. a crawl database
- C. a crawl component
- D. an entry in the Hosts file

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 22

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm. The farm contains four servers. The servers are configured as shown in the following table.

Server name	Server operating system
APP1	32-bit version of Windows Server 2008 Enterprise
SQL1	64-bit version of Windows Server 2003 Enterprise and 64-bit version of Microsoft SQL Server 2005 Service Pack 3 (SP3)
WFE1	64-bit version of Windows Server 2008 Enterprise
WFE2	64-bit version of Windows Server 2003 Enterprise

- A. the operating system on APP1
- B. the operating system on SQL1
- C. the operating system on WFE2
- D. SQL Server 2005 SP3 on SQL1
- E. the operating system on WFE1

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 23

You plan to deploy SharePoint Server 2010 and to enable self-service site creation.

You need to recommend a Web application configuration to meet the following requirements:

- Users must be allowed to create site collections.
- Site collections created by Web developers must be deleted manually.
- Site collections created by managers must be deleted automatically if they are not used for 120 days.
- Site collections created by other users must be deleted automatically if they are not used for 60 days.
- The number of site collections must be minimized.

What should you include in the recommendations?

- A. one Web application that contains one site collection and one Web application that contains two site collections
- B. one Web application and one site collection
- C. three Web applications that each contains one site collection
- D. one Web application that contains three site collections

Correct Answer: C

Section: (none)

Explanation

QUESTION 24

You are the administrator for a SharePoint 2010 farm.

You need to design a restore plan for end users of documents to meet the following requirements:

- Each user must be able to recover documents that they have deleted.
- Deleted items must be retained for 30 days.
- End users must be able to permanently delete documents when needed.

What should you do?

- A.
 - Turn on the first-stage Recycle Bin.
 - Create a Windows Task Schedule for daily backup of sites.
- B.
 - Turn on the first-stage Recycle Bin.
 - Turn off the second-stage Recycle Bin.
- C.
 - Turn on the first-stage Recycle Bin.
 - Use Central Administration to back up and restore sites.
- D.
 - Turn off the first-stage Recycle Bin.
 - Use the Microsoft STSADM command-line tool to perform the backup and restore of sites,

Correct Answer: B

Section: (none)

QUESTION 25

You have a SharePoint Server 2010 server farm. The farm contains two Web servers.

The load between the two Web servers is distributed by using DNS round robin.

You need to ensure that the farm is available for all users if one of the web servers fails.

What should you do?

- A. Implement Windows Network Load Balancing
- B. Add a new Web server to the farm
- C. Configure netmask ordering
- D. Configure alternate access mappings

Correct Answer: A

Section: (none)

Explanation

QUESTION 26

You are the administrator for a SharePoint 2010 farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for internal users in the corporate network. The network also includes separate Active Directory accounts for external users in the perimeter network.

You want to prevent the perimeter network from accessing internal user accounts.

You need to design the extranet farm topology.

Which type of topology should you use?

- A. Configure a one-way domain trust where the corporate network trusts the perimeter network.
- B. Configure a one-way domain trust where the perimeter network trusts the corporate network.
- C. Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure.
- D. Configure a two-way domain trust.

Correct Answer: B

Section: (none)

Explanation/Reference:

QUESTION 27

You have a SharePoint Server 2010 server farm. The farm contains a single Web application.

The Web application contains 500 site collections.

You need to recommend a solution to ensure that a user can manage all of the site collections.

You must achieve this goal while meeting the following requirements:

- Ensure that the user cannot create Web applications.
- Use the minimum amount of administrative effort.

What should you recommend?

- A. Configure a managed account.
- B. Add the user to the Farm Administrators group.
- C. Define a policy for the Web application.
- D. Modify the site collection administrators.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 28

You are the administrator for a SharePoint 2010 farm.

A research team manages documents, photos, video files, and metadata for a clinical case study.

You need to design a logical taxonomy for this clinical case study.

What should you implement?

- A. A document set.
- B. A document library.
- C. A document workspace, a photo gallery, and an asset library.
- D. A set of folders within a document library.

Correct Answer: D

Section: (none)

Explanation

QUESTION 29

You are the administrator for a SharePoint 2010 farm.

You need to implement an enterprise search technology that meets the following requirements:

- Allows users to search people and their expertise.
- Crawls content outside the SharePoint.
- Provides metadata-driven refinement in the top results.
- Provides phonetic searches.
- Provides search email alerts.

- A. SharePoint Server 2010 Search
- B. FAST Search Server 2010 for SharePoint
- C. Search Server 2010 Express
- D. User Profile Service

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 30

You need to identify which factors must be considered when implementing site use confirmation and automatic deletion.

Which two factors should you identify?

- A. how often to notify the site owners

- B. the size of the documents stored in inactive sites
- C. the site template used to create the site collection
- D. the number of days a site is inactive

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 31

You have two SharePoint Server 2010 server farms named Farm1 and Farm2.

Farm1 is located in the internal network. Farm1 hosts an authoring site collection that was created by using a publishing site template.

Farm2 is located in the perimeter network, Farm2 hosts a production site collection that was created by using a publishing site template.

A standard content deployment job is scheduled to run every day to move content from Farm1 and Farm2.

You need to recommend a solution to ensure that users can immediately deploy content from Farm1 to Farm2. The solution must use the minimum amount of administrative effort.

- A. site definitions
- B. a content deployment Quick Deploy job
- C. site templates
- D. Send to connections

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 32

You plan to implement SharePoint Server 2010 for your company's public Website. The site will display information about the products that the company sells.

You need to ensure that all the Web pages in the site display the company logo at the top of the page and a copyright notice at the bottom of the page.

What should you implement?

- A. master pages
- B. variations
- C. page layouts
- D. site templates

Correct Answer: A

Section: (none)

Explanation

QUESTION 33

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

- The farm must handle up to 10,000 users.
- The farm must be optimized for search and load balancing
- The farm must be cost-efficient.

Which farm deployment topology should you use?

- A.
 - first web server that has the Query component
 - second web server that has the Query component
 - single application server that has all other service components
 - first database server that contains Search databases
 - second database server that contains all other SharePoint databases
- B.
 - first web server that has the Query component
 - second web server that has the Query component
 - single application server that has all service components
 - single database server that contains all SharePoint databases.
- C.
 - first web server that has the Query component
 - second web server that has the Query component and all other service components
 - single database server that contains all SharePoint databases
- D.
 - first web server that does not have the Query component
 - second web server that does not have the Query component
 - third web server that has the Query component
 - first application server that has the query and crawl component
 - second application server that has all other application server components
 - first database server that contains Search databases
 - second database server that contains all other SharePoint databases

Correct Answer: A

Section: (none)

QUESTION 34

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain three sites named Sales, Corp, and Test.

You plan to monitor the total storage used by each site.

You need to recommend a Web application and site collection configuration. The configuration must meet the following requirements:

- Provide the ability to track the storage used by each specific site.
- Minimize the number of Web applications and site collections.

Which configuration should you recommend?

- A. One Web application, one site collection, and two subsites
- B. One Web application and three site collections
- C. Three Web applications that each have one site collection
- D. One Web application, one site collection, and three subsites

Correct Answer: B

QUESTION 35

You are load testing a SharePoint Server 2010 server farm. You need to simulate 30,000 concurrent user connections.

Which tool should you use?

- A. Internet Information Services (IIS) Manager
- B. Microsoft Visual Studio
- C. Microsoft SQL Server Management Studio
- D. SQL Server Profiler

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 36

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain a Web application for an intranet site and a Web application for an extranet site.

The intranet will contain the following three content areas:

- Human resources
- Finance
- Operations

The extranet will contain the following two content areas:

- Partners
- Customers

All content databases will be backed up by using Microsoft SQL Server.

You need to recommend the minimum number of site collections required for the farm.

You must ensure that each content area can be restored independently.

How many site collections should you recommend?

- A. 2
- B. 7
- C. 1
- D. 5

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 37

You plan to implement SharePoint Server 2010 on your company's intranet.

The company has a custom application that contains the contact information of all users.

You need to ensure that you can use the contact information to create custom audiences.

What should you implement?

- A. Access Services and the User Profile Service
- B. Business Connectivity Services and Access Services
- C. Business Connectivity Services and the User Profile Service
- D. The Managed Metadata Service and the User Profile Service

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 38

You are the administrator for a SharePoint 2010 farm.

You need to plan the capacity workload for the web front-end servers.

What information should you collect?

- A. Concurrent users and average throughput
- B. Active users and peak load
- C. Active users and average throughput
- D. Concurrent users and peak load

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 39

You have a SharePoint Server 2010 server farm that contains one Web server. The Web server has only one IP address.

You plan to implement the following separate Web applications:

- <http://portal.contoso.com>
- <http://intranet.contoso.com>
- <http://www.contoso.com>

You need to recommend a solution to ensure that users can access all three Web applications.

What should you include in the solution?

- A. host headers
- B. handler mappings
- C. extended zones
- D. alternate access mappings

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 40

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types.

No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document.

What should you do?

- A. Create a secure store application for the document types and a managed property that references the secure store. Add the new application to the search refinement panel definition.
- B. Create a new list that includes a column to store the document type. Add a lookup to this list in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.
- C. Create a choice column in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.
- D. Create a managed metadata term set for document types and include the managed metadata in the document content type. Add the new column to the search refinement panel definition.

Correct Answer: C

Section: (none)

Explanation/Reference:

QUESTION 41

You are the administrator for a SharePoint 2010 farm. The farm uses the user profile service to synchronize user profiles of employees from Active Directory. Your company stores contact information of employees in a separate Microsoft SQL Server database.

Currently, user profiles do not contain contact information of all employees.

You need to design a solution that will synchronize contact information of employees from the SQL database into user profiles.

- A. Create a Business Connectivity Services (BCS) external content type in Microsoft Visual Studio 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.
- B. Use the managed metadata service to create a term set for the employee contact fields. Then, configure the user profile service to use this term set, and start a full import.
- C. Run the following SharePoint Management PowerShell commands:
`$Model = Get-SPBusinessDataCatalogMetadataObject -BdcObjectType "Model" -Name "ContosoModel" -`

ServiceConext http://contoso Export-SPBusinessDataCatalogModel -Identity \$Model -Path "C:\folder\model.bdcx"

- D. Use Microsoft Visual Studio 2010 to create a timer job that synchronizes data between the SQL database and profile store.
- E. Create a Business Connectivity Services (BCS) external content type in SharePoint Designer 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.

Correct Answer: E

Explanation/Reference:

QUESTION 43

You are the administrator for a SharePoint 2010 farm.

The marketing team in your company manages documents, photos, video files, and metadata for an advertising campaign.

You need to design a logical taxonomy for the specific campaign.

What should you implement?

- A. A set of folders within a document library.
- B. A document library.
- C. A document set.
- D. A document workspace, a photo gallery, and an asset library.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 44

You have 10 SharePoint Server 2010 Web servers. All of the servers have the query component installed. You need to ensure that search requests are distributed across all Web servers.

What should you implement?

- A. content sources
- B. a crawler impact rule
- C. a crawl rule
- D. index partitioning

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 45

You have a SharePoint Server 2010 server farm that contains two servers.

You need to recommend a solution to ensure that both servers have a complete copy of the index.

What should you recommend?

- A. Add a mirror query component
- B. Add a new crawl database
- C. Add a new crawl component
- D. Add a new query component

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 46

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to implement SSL in WebApp1.

You need to recommend a solution to ensure that the internal users can access WebApp1 by using HTTP and HTTPS.

What should you include in the recommendation?

- A. service application groups
- B. Remote BLOB Storage (RBS)
- C. the Access Services service application
- D. Microsoft Visual Studio 2010
- E. the Secure Store Service service application
- F. Information Rights Management (IRM)
- G. user policies
- H. managed accounts
- I. cross-firewall access zones
- J. Network Access Protection (NAP)
- K. SharePoint Health Analyzer
- L. a BLOB cache
- M. Active Directory Federation Services (AD FS)
- N. Network Load Balancing (NLB)
- O. an ASP.NET Membership Database
- P. alternate access mappings

Correct Answer: P

Section: (none)

Explanation

Explanation/Reference:

QUESTION 47

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You need to recommend a solution to authenticate the external users by using the internal Active Directory infrastructure.

What should you include in the recommendation?

- A. Network Access Protection (NAP)
- B. Active Directory Federation Services (AD FS)
- C. The Access Services service application
- D. Network Load Balancing (NLB)
- E. Microsoft Visual Studio 2010
- F. an ASP.NET Membership Database
- G. Remote BLOB Storage (RBS)
- H. the Secure Store Service service application

- I. Information Rights Management (IRM)
- J. a BLOB cache
- K. managed accounts
- L. service application groups

QUESTION 52

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You also have a public site that is hosted on Microsoft SharePoint Online.

You need to recommend a search solution to meet the following requirements:

- Provide users with the ability to search the SharePoint Online site and SharePoint on-premises simultaneously.
- Provide search results from SharePoint Online and SharePoint on-premises in a single Web Part.

What should you include in the recommendation?

- A. SharePoint Search Federation
- B. A content scope
- C. Search Scopes
- D. A Crawl Rule

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 53

You are planning the deployment of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

The farm will have the Excel Services service application and the Managed Metadata Service service application deployed.

You need to identify the minimum number of servers that must be purchased to meet the following requirements:

- The service applications must be load balanced.
- Hardware and software costs must be minimized.
- Site collections must be available if a single server fails.
- Microsoft SQL Server must not be installed on any front-end Web servers.

How many servers should you identify?

- A. 3
- B. 4
- C. 6
- D. 5

Correct Answer: B

QUESTION 54

You are planning the taxonomy of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

- The legal department will require a list view threshold of 1,000 items.
- The accounting department will require a list view threshold of 2,000 items.
- The manufacturing department will require a list view threshold of 1,000 items.

You need to identify the minimum number of web applications and site collections that must be created to meet the requirements.

How many web applications and site collections should you identify?

- A. Three web applications and three site collections
- B. One web application and three site collections
- C. Two web applications and two site collections
- D. One web application and two site collections

Correct Answer: C
Section: (none)

QUESTION 55

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to create document repository sites for the sales department and the marketing department.

You identify the following requirements:

- Files that are larger than 5 MB and are uploaded by users in the sales department must be stored in Remote BLOB Storage (RBS). All others files uploaded by the sales users must be stored in a Microsoft SQL Server database.
- All files uploaded by users in the marketing department must be stored in a SQL Server database.

You need to recommend the minimum number of web applications, site collections, and content databases that must be created to meet the requirements.

What should you recommend?

- A. Two web applications and two site collections in two content databases
- B. One web application and two site collections in one content database
- C. One web application and one site collection in one content database
- D. One web application and two site collections in two content databases

Correct Answer: D
Section: (none)
